

McGraw-Hill's

3 Evolve Reach (HESI) A2^{*} Practice Tests

**Admission Assessment Exam
for Nursing School Entrance**

- Sharpen your test-taking skills
- Determine your HESI A2 readiness
- Boost your confidence—and do your best on test day

Kathy A. Zahler

***After exam day, trust Schaum's Outlines
for quick, concise review of your nursing
courses so you can achieve higher grades***

We know how challenging nursing school classes can be—but we can help. Turn to the study guide series that more than 40 million students have used for success in the classroom and on exams. Each Schaum's Outline presents all the essential course information in an easy-to-follow, topic-by-topic format. You also get hundreds of examples, solved problems, and practice exercises to test your skills.

CHAPTER 1

Introduction to the A2

This book contains three practice tests for the Evolve Reach (formerly HESI) A2 (Admission Assessment Exam). They follow the format used in the A2 online exam. Taking these practice tests will give you a good idea of what you'll encounter when you take the real exam. As you complete the tests, you'll become familiar with the directions, structure, and content that you're likely to see at the testing site.

A2 VERSUS OTHER NURSING SCHOOL EXAMS

Who Takes the A2 Exam?

The A2 Exam is used for admission to certain nursing schools. It is a product of Evolve Learning Systems, a division of Elsevier Publishing. Different nursing programs require different exams; for example, some schools expect applicants to take the Nursing Entrance Test (NET) or the Test of Essential Academic Skills (TEAS). Other schools give you a variety of entrance exams from which to choose. Still others require the A2 exclusively.

How Do I Know Whether I Should Take the A2 Exam?

To know whether the school or schools of your choice require the A2, visit their websites or call their admissions offices. They may call this particular test the HESI A2 test, the Evolve Reach A2 test, or the Admission Assessment Exam. Before you begin to study, make sure that you are

studying for the correct test. You may need to use McGraw-Hill's *5 TEAS Practice Tests* or *Nursing School Entrance Exams* instead.

PLANNING TO TAKE THE A2

When Is the A2 Given, and How Do I Register for It?

The exam is given at a variety of sites, often at nursing schools or community colleges. The dates of the exam may depend on the application dates for the nursing school where you take the test. Some schools offer the test every few weeks throughout the year. You may also take the exam at one of more than 350 Prometric™ testing sites around the country.

To register for an exam, send this information in an e-mail to exam-eligibility@elsevier.com: school, first name, middle name, last name, address, city, state, zip code, phone number, and e-mail address. You will receive a confirmation notice and eligibility ID by return e-mail within three days. Check this material carefully and e-mail Elsevier immediately if there is an error.

To take the exam at the nursing school or community college of your choice, log on to that school's website to learn how to sign up for the next available test.

To take the exam at a Prometric site, log on to <http://www.prometric.com/Elsevier>. Plugging in your state, clicking "Admission Assessment," and typing your zip code lets you locate the testing site and date that best suit your needs. From there, you may use your confirmation notice to help schedule the test at a time convenient for you.

The cost of the test will vary depending on where you take it. You will pay either the business office of your school or Prometric when you set up your test date.

When Should I Take the A2?

Check with your chosen nursing programs to find out when they need score transcripts. Then work backward from that date to determine when you

should take the test.

If you take the test at the nursing school that you hope to attend, the date of the test will be designed to mesh with that school's application dates.

Which Modules of the A2 Must I Take?

The A2 contains several modules in the areas of English language, mathematics, and science. Not all nursing programs require every module. If you take the test at a nursing school or community college, the school will probably only test you on the modules that its nursing program requires. For example, some programs do not require any of the science modules. Some require Reading Comprehension and Grammar, but not Vocabulary and General Knowledge. If you wish to send transcripts to several schools, visit their websites to learn which modules they require. Then make sure that the site where you are taking the test offers all of those modules.

What Do I Need on the Day of the Test?

The A2 is only available online. You must present one form of government-issued identification. Passports, driver's licenses, or green cards are fine; credit cards or student IDs are not.

You may need your payment or a copy of your payment receipt. You will definitely need the username and password assigned to you by Elsevier when you registered for the test.

You may not use any resources such as calculators or reference books. A basic calculator is included in the software. You may not carry in a cell phone, tablet, or other electronic device. You may not bring food or beverages into the testing site.

SCORING THE A2

How Is the A2 Scored?

The A2 consists of eight academic modules (physics, the eighth module, is currently a pilot program and may not be offered until some future date). Your scores may be reported in three ways—as a percentage score for each module administered; as a subject-area composite score (for all science modules, for example); and as a composite score (the average score for all the modules you complete).

When Will I Receive My Score?

As soon as you complete your online test, you will receive a printed score report from the proctor.

How Do I Submit My Score to Nursing Programs?

Your testing fee automatically includes the submission of scores to the school where you took the test. If you took the test at a Prometric center, or if you want your transcript sent to additional schools, order transcripts from Elsevier via its website or by calling 1-800-950-2728. Elsevier will charge a processing fee for each transcript sent.

Is My Score Good Enough?

Whether your score is acceptable depends on the program to which you are applying. Some nursing programs have specific cutoff points for each module. Others require a certain composite score.

Some nursing programs allow you to take the A2 two or three times if your first scores are unacceptable. They may require you to wait several weeks or months between exams. Again, the rules vary from program to program.

PARTS OF THE TEST

The A2 is divided into eight academic modules within three broad content areas: English language, mathematics, and science. In addition, the A2 may include a section on critical thinking, which may be graded or ungraded, plus one or two ungraded tests under the heading “Learner Profile.” This

chart shows the number of items (which may vary year to year) and time suggested for each section. Because the test is given online, the times given are only suggestions that will allow you to complete the entire test within a reasonable time.

ENGLISH LANGUAGE

Reading Comprehension	47 questions	60 minutes
Vocabulary and General Knowledge	50 questions	50 minutes
Grammar	50 questions	50 minutes

MATHEMATICS

Basic Math Skills	50 questions	50 minutes
-------------------	--------------	------------

SCIENCE

Biology	25 questions	25 minutes
Chemistry	25 questions	25 minutes
Anatomy and Physiology	25 questions	25 minutes
Physics*	25 questions	50 minutes

LEARNER PROFILE

Critical Thinking	30 questions	30 minutes
Learning Style	14 questions	15 minutes
Personality Profile	15 questions	15 minutes

*Currently being piloted

FORMAT TIP

Rarely will anyone be administered every module on the A2. Check with your preferred nursing program to see which modules it requires. Depending on the modules required, the typical test may run from three to four hours.

Reading Comprehension

Reading items test your comprehension of informational reading passages. You will be asked to read a short, multiparagraph passage and answer a

variety of questions about it. Some of the most common skills tested involve the following:

- Main idea
- Supporting details
- Meanings of words in context
- Author's purpose
- Fact and opinion
- Drawing conclusions and making inferences
- Summarizing
- Author's tone

The passages used for A2 all have a science or health theme and may be typical of the type of reading you will do in your professional life.

FORMAT TIP

With the exception of some math questions, all questions on the A2 are multiple choice and give you four possible choices from which to pick.

Here is an example of an A2 reading comprehension question. On the test itself, most reading passages will be longer than this one.

Counterfeit medicine may be contaminated, or it may contain the wrong or no active ingredient. Counterfeit medicine is illegal and may be dangerous. The quality, safety, and efficacy of counterfeit medicines are not known. Counterfeit medicine is often sold illegally over the Internet or by illegal operators posing as licensed pharmacies.

1. What is the author's primary purpose in writing this passage?
 - A. To inform
 - B. To persuade
 - C. To entertain

D. To analyze

Explanatory Answer: This question tests your understanding of the author’s purpose or intent. This author defines *counterfeit medicine* and presents some facts about it, which indicates that the purpose is to inform (choice A). The author makes no judgments or calls to action, as might take place in a persuasive essay (choice B), and there is no analysis or in-depth investigation of the topic (choice D).

Vocabulary and General Knowledge

This section of the test includes vocabulary terms that appear regularly in health care contexts as well as in general and academic use. You may be asked to select a word or phrase that defines an underlined word in a sentence or to identify a synonym for a given word.

Here are two examples of A2 vocabulary questions.

1. Select the correct definition of the underlined word.

The patient received a potent dose of sleeping medication.

- A. Average
- B. Invasive
- C. Powerful
- D. Initial

Explanatory Answer: *Potent* means “strong,” so a potent dose is a strong, or powerful, dose (choice C).

2. A person who is compliant is _____.

- A. flexible
- B. obedient
- C. whiny
- D. appreciative

Explanatory Answer: To comply is to act in accordance with a rule or request, so someone who is compliant is obedient (choice B).

Grammar

The grammar section requires you to locate sentences that are grammatically correct, words or phrases that are not used correctly, and words that best complete a sentence to make it grammatically correct. Questions might focus on any of the following topics, among others:

- Subject-verb agreement
- Pronoun-antecedent agreement
- Misplaced modifiers
- Pronoun case
- Serial commas
- Sentence fragments
- Run-on sentences
- Troublesome word pairs (*between/among, good/well, fewer/less, its/it's, lie/lay, etc.*)

Here are two examples of A2 grammar questions.

1. Select the word or phrase that makes this sentence grammatically correct.

Could you please hand _____ the tongue depressors?

- A. myself

- B. me
- C. I
- D. ourselves

Explanatory Answer: The pronoun required is an object pronoun (it receives the action of the verb), so only *me* (choice B) completes the sentence correctly.

2. Select the correct order of words to fit the sentence structure.

The students placed _____ finished essays over _____; _____ glad to be done.

- A. there, their, they're
- B. they're, there, their
- C. their, there, they're
- D. their, they're, there

Explanatory Answer: The essays belong to the students and thus are *their* essays. They placed them in that spot, *there*. They are (*they're*) glad to be done. The correct answer is choice C.

FORMAT TIP

For questions with multiple answers like the preceding one, all answers must be correct. There is no partial credit.

Basic Math Skills

The mathematics section of the A2 focuses on the sort of math you may need to use on the job. For that reason, there is an unusual emphasis on

measurements and fractions. Here are some of the subskills that you might see on the test:

- Computation (addition, subtraction, multiplication, division) with whole numbers
- Computation with decimals
- Computation with fractions
- Fractions, decimals, and percentages
- Ratios and proportions
- Money
- Military time
- Roman numerals
- Measurement conversions

FORMAT TIP

A few items in the math section may be short answer—you must compute the answer rather than choosing from four possible responses.

Here are two examples of A2 basic math questions.

1. Multiply: $(4.3)(3.4) =$

- A. 146.2
- B. 14.62
- C. 12.12
- D. 7.7

Explanatory Answer: Many questions of this sort may be easily answered by estimating. 4.3×3.4 will be somewhere midway between 4×3 and 4×4 , so choices A and D are clearly incorrect. The answer is choice B.

2. How many fluid ounces are in a pint? (Enter numeric value only.)

Explanatory Answer: There are 8 ounces in a cup and 2 cups in a pint, so the answer is 16.

TIPS FROM TEST TAKERS

Know your conversions, especially liquid measurements. Study a chart of metric-to-standard conversions, too! No conversion chart appears with the test, so you must have these memorized.

Biology

The biology tested on the A2 is basic, which does not mean that it is easy. Expect to see questions on any of these topics:

- Scientific method
- Taxonomy
- Molecules
- Cells
- Photosynthesis
- Cellular reproduction
- Genetics

Here are two examples of A2 biology questions.

1. What is the result of meiosis II?

- A. Two secondary sex cells
- B. Four haploid daughter cells
- C. Two primary sex cells
- D. Duplication of primary sex cells

Explanatory Answer: Mitosis results in two primary sex cells (choice C), and meiosis I leads to two secondary sex cells (choice A). In meiosis II, the resulting four cells have half the chromosomes of the parent cell. The answer is choice B.

2. Which organelle in animal cells is most similar in function to the chloroplast in plant cells?
- A. Cell membrane
 - B. Vacuole
 - C. Ribosome
 - D. Mitochondrion

Explanatory Answer: Chloroplasts are the site of photosynthesis, or energy conversion, in plants. Mitochondria are the site of respiration, or energy conversion, in animals. The answer is choice D.

Chemistry

Organic and inorganic chemistry are tested on the A2. All health professionals should have a basic understanding of chemistry. You may find questions on any of these topics:

- States of matter
- Atomic structure
- Chemical equations
- Chemical reactions
- Acids and bases
- Radioactivity

- Chemical bonds
- Molarity
- Stoichiometry
- Reaction rates
- Redox reactions
- Electron configurations

TIPS FROM TEST TAKERS

Review the periodic table of elements, and know the basics!
Unlike some tests, the A2 doesn't show you the table.

Here are two examples of A2 chemistry questions.

1. What is the expected pH of orange juice?

- A. Between 3.0 and 4.0
- B. Between 6.0 and 7.0
- C. Between 8.0 and 9.0
- D. Between 11.0 and 12.0

Explanatory Answer: Orange juice is fairly acidic, meaning that it would fall toward the lower end of the pH scale. The answer is A.

2. Sodium's ground state electron configuration may be represented as $1s^2 2s^2 2p^6 3s$. How many energy levels does sodium have?

- A. 1
- B. 2
- C. 3
- D. 6

Explanatory Answer: The first energy level of any atom contains just an s subshell. The second may include an s and a p subshell. Looking at sodium in table form may make this easier to solve:

Explanatory Answer: Sodium, in other words, has electrons in three energy levels, so the answer is C. In the first level, it has two electrons in subshell s. In the second level, it has two electrons in subshell s and six electrons in subshell p. In the third level, it has one electron in subshell s. Adding up the electrons, $2 + 2 + 6 + 1$, gives you the total number of electrons in sodium, or sodium's atomic number, 11.

Anatomy and Physiology

This is the part of biological sciences that applies specifically to nursing—the human body and its systems, organs, and processes. You may see any of these topics on the A2:

- Cells and tissues
- Body planes and directions
- Skeletal system
- Muscular system
- Nervous system
- Endocrine system
- Circulatory system

- Respiratory system
- Digestive system
- Urinary system
- Reproductive system

TIPS FROM TEST TAKERS

Review basic anatomical directions (proximal, distal, and so on) and know your organs and functions!

Here are two examples of A2 anatomy and physiology questions.

1. Which arm bone is most proximal to the shoulder?

- A. Radius
- B. Ulna
- C. Humerus
- D. Carpal

Explanatory Answer: To be proximal is to be close to the point of attachment. The radius (choice A) and ulna (choice B) are forearm bones, and the carpal (choice D) is in the wrist. Of the four bones listed, the humerus (choice C) is the arm bone that is closest to the shoulder.

2. Somatotropin is secreted by the _____.

- A. pituitary gland
- B. adrenal glands
- C. hypothalamus
- D. thyroid

Explanatory Answer: Somatotropin is also known as growth hormone. It is secreted by the pituitary, which regulates growth. The answer is choice A.

Physics

At present, physics is an experimental part of the A2. This section of the test focuses specifically on those skills a radiologist or other imaging scientist might need. Most of the physics section is set up as problems. Tested topics may include:

- Speed and acceleration
- Momentum
- Linear and rotational motion
- Newton's laws
- Kinetic and potential energy
- Gravitation
- Wave classification and theory
- Optics
- Static electricity
- Coulomb's law
- Electric fields and charges
- Currents, voltage, and resistance
- Ohm's law

Here are two examples of A2 physics questions.

1. A go-kart is set into motion with an initial speed of 5 m/sec. It moves for 20 seconds. At the end of that time, its speed is 25 m/sec. What is the magnitude of the go-kart's acceleration?
A. 1.0 m/sec^2
B. 2.5 m/sec^2

- C. 15 m/sec²
- D. 20 m/sec²

Explanatory Answer: Find acceleration by dividing the change in velocity by the length of time the object is in motion:

$$\frac{25 \text{ m/sec} - 5 \text{ m/sec}}{20 \text{ sec}} = \frac{20 \text{ m/sec}}{20 \text{ sec}} = 1.0 \text{ m/sec}^2$$

The answer is A.

2. In one minute, 15 waves break onto the shore. What is the frequency of the waves?
- A. 0.15 Hz
 - B. 0.2 Hz
 - C. 0.25 Hz
 - D. 0.4 Hz

Explanatory Answer: To find frequency, first find period, the time in seconds between one crest and the next. In this case,

$$T = \frac{60 \text{ seconds}}{15} = 4 \text{ seconds}$$

Frequency is the reciprocal of period, expressed in seconds⁻¹, or Hertz.

$$f = \frac{1}{4} = 0.25 \text{ Hz}$$

The answer is choice C.

TIPS FROM TEST TAKERS

Review all your basic formulas—especially those for motion, force and work, power, gravitation, and electricity. Most physics questions will be problems that require those equations.

Critical Thinking

You have not yet worked as a nurse, but your program administrators may want to know how well you are able to apply common sense and critical thinking to specific nursing situations. This section may set up scenarios and ask you to choose among four strategies to triage patients or to deal with a specific medical or ethical situation. It looks at your ability to solve problems, to prioritize, to dissect arguments, to interpret data, and to overcome biases.

Some nursing programs use the Critical Thinking section as a pre- and posttest to see how well students improve over the course of training. Others require a particular score for entry. There is no way to study for this section, although some students recommend reading through a practical nursing guide if you know that your chosen nursing program requires a high score on this section.

Learning Style

This part of the test, which is not graded, assesses your preferred learning style and provides you with study tips based on your responses. Because you cannot study for this part of the test, which is purely subjective, we will not cover it in this book.

Personality Profile

This ungraded part of the A2 determines your level of introversion or extroversion and classifies your personality type. It is primarily to be used

by your teachers in your chosen nursing program. We will not discuss this part of the test in this book.

CHAPTER 2

Tips and Strategies for Test Takers

HOW TO USE THIS BOOK

Preparing for the A2 ahead of time is worth the effort. This book will help you to do the following:

- Familiarize yourself with the test format
- Recognize the skills tested on the A2
- Practice your test-taking skills using sample A2 exams

Here is a practical study program that will help you make the best use of this book. The amount of study and review you do between tests will depend on what weaknesses you discover as you assess your responses and compare them to the explanatory answers that follow each test.

Step 1: Think About Your Weaknesses

If it has been a long time since you took biology or thought about parts of speech or algebraic equations, you might want to brush up on those long-lost skills. [Chapter 1](#) of this book lists the major skills that are covered on the A2. If your preferred nursing program requires some of the science sections of the A2, you may need to review formulas, anatomy, the periodic table, and so on—even before you take your first practice test.

Build some review time into your test-prep schedule. Pull out your old textbooks, go to the library, or do some online review.

Step 2: Take the Practice Tests

There are three practice tests, and each contains eight modules, just as the real A2 does. If you know which modules are required by your chosen school or schools, focus on those and ignore the others. As you take each

test, try to simulate actual test conditions. Sit in a quiet room, time yourself, and work through as much of the test as time allows. If you wish, take a break after each section of the test. When you are done, check your answers against the explanatory answers that follow the test you took. Use the explanatory answers to figure out where you went wrong on any questions you did not answer correctly.

The practice tests in this book are parallel. This means that in most cases, similarly numbered questions on tests 1, 2, and 3 will measure the same sort of skill. This fact will help you to determine where your problem areas are. For example, if you consistently miss question number 3 in the Basic Math Skills section of practice tests 1, 2, and 3, you will know that you need to study up on the concept of ratios.

Keep in mind that you will be taking the real test online. That may affect the speed with which you read questions or respond.

Step 3: Review and Improve

Each time you take a practice test, review the explanatory answers. Give yourself a break of a few days. Then take the next practice test and see whether you do better. Look for patterns. Did you miss the same kinds of questions on practice tests 1 and 2? Make a list of skills to review, and do some serious studying before you take practice test 3. If you have kept track of your weaknesses and studied those skills in depth, you should see a noticeable improvement in your score.

TIPS FROM TEST TAKERS

No review book or sample test will provide you with all the material you need to study, especially when it comes to the Anatomy and Physiology (A&P) section of the test. Pull out your old anatomy books and spend some time reviewing before you take a practice test.

STRATEGIES FOR TOP SCORES

As with any test, you can use certain strategies to improve your A2 score. You already know whether you are better at math or at science, or whether you understand grammar well enough to score high on that part of the test.

STUDY STRATEGIES

- **Get to know the format of the exam.** The practice tests in this book are designed to be similar to what you will see on the A2.
- **Get to know the test directions.** The A2 is not different from other multiple-choice tests you have taken over the years. There are always four choices, and most questions are stand-alone or refer to a given passage or problem. Only in the math section are there occasional short-answer questions where choices are not given.
- **Get to know what topics are covered.** [Chapter 1](#) lists the major skills that are covered on the A2.
- **Test and review.** If possible, give yourself time to take each of the practice tests in this book. These are long tests, so you will need to map out big chunks of time with breaks in between. Do not plan to take more than one test in a day. Study the answers, look for patterns, and review those skills that consistently cause problems for you.

TEST-TAKING STRATEGIES

- **Answer all the questions!** Your time is limited across the entire test, but depending on where you take the exam, you may be able to spend more time on chemistry and less on reading comprehension if you prefer. Unfortunately, the A2 is given in a format that does not allow you to go back and review questions you may have had trouble on, so do your best with each question as it is presented.
- **Use the process of elimination.** Even if you feel completely stumped, you will probably be able to eliminate one or more choices simply by using common sense. That improves your odds of getting the right answer.
- **When in doubt, guess.** On the A2, every question has the same value, and no points are taken off for guessing. Use the process of elimination, but if you're baffled, go ahead and guess. On multiple-choice questions with four possible responses, you have a 25 percent chance of getting the

answer right by guessing. If you leave the answer blank, your chance drops to zero.

- **Beware of answer choices that look reasonable but are not correct.**

Because most questions on the A2 are multiple choice, the test makers have many chances to mislead you with tricky distracters (wrong answers). Focus, use scratch paper to solve problems if it is allowed, and use the process of elimination to help narrow your choices.

TIPS FOR TEST DAY

- **Get a good night's sleep.** You need energy to face a test that is more than three hours long, and you won't have energy if you're exhausted from worry or from excessive last-minute review. If you have taken all three practice tests, reviewed those skills that troubled you, and improved your scores on your final test, you have done what you need to do to succeed. Arriving at the test site well rested and alert will improve your chances dramatically.
- **Be careful as you indicate your answers.** The computer-based A2 does not allow you to go back and fix questions. Make sure that you answer questions as they are presented. If you use the calculator provided in the software, double-check your answers.

TIPS FROM TEST TAKERS

Buttons on the online calculator can occasionally “stick,” so be sure to estimate your answers and not rely entirely on the calculator.

- **Watch the time.** Wear a watch and check yourself from time to time. If you have timed yourself on the practice tests, you should be pretty good at estimating the time you have left as you progress through the A2. Individual sections may not be timed, but you may have an overall time deadline; you will be told this as you begin the exam.

CHAPTER 3

A2 Practice Test 1

READING COMPREHENSION

47 items

Suggested time: 60 minutes

High Fructose Corn Syrup

Lately, there has been a lot of discussion—within the medical community as well as across the kitchen table—about the supposed harmful effects that high fructose corn syrup (HFCS) has on the human body. Many people wonder if its use as a sweetener is contributing to the population’s overall rate of obesity.

In the late 1970s, many of the largest food manufacturers in the United States shifted away from using refined table sugar to using the much cheaper HFCS. Soon HFCS was used to sweeten many products including cereal, steak sauce, soft drinks, bread, baked beans, and yogurt.

Table sugar and HFCS share a similar biochemical structure: both contain the simple sugars glucose and fructose, though HFCS is produced from corn and undergoes additional processing to increase the amount of fructose.

The American Medical Association does not take the view that one sweetener is better or worse than another. However, researchers at Princeton University have recently released a study showing that rats who consumed HFCS gained more weight, especially in the abdominal area, than rats who consumed table sugar.

Other medical professionals say that more research is needed before conclusive results can be drawn. Meanwhile, nearly everyone can agree that both table sugar and HFCS are high in calories—nearly 50 per tablespoon

—and that neither form of sweetener provides any measurable nutritional value.

1. What is the main idea of the passage?

- A. The American Medical Association has identified preferred sweeteners.
- B. High fructose corn syrup may be contributing to obesity in America.
- C. Refined table sugar is a natural product, whereas corn syrup is manufactured.
- D. Rats show a decided preference for high fructose corn syrup over other sweeteners.

2. Which of the following is *not* listed as a detail in the passage?

- A. HFCS and sugar share a biological structure.
- B. HFCS is cheaper to use than sugar is.
- C. HFCS is now used to sweeten a variety of products.
- D. HFCS contains more calories than aspartame does.

3. What is the author's primary purpose in writing this essay?

- A. To inform
- B. To persuade
- C. To entertain
- D. To analyze

4. Choose the best summary of the passage.

- A. After extensive studies of HFCS and its effect on humans, scientists recommend its removal from grocery products.
- B. A recent study on rats seems to confirm doctors' suspicions that HFCS is contributing to people's unhealthful weight gains.
- C. Until more research is done on HFCS, people are better off using it than replacing it with refined sugar.
- D. The AMA suggests that avoiding HFCS can have immediate, healthful results on overweight patients.

Hypertension

The term *hypertension* is used to describe the condition of chronically high blood pressure. People who are obese, experience a lot of stress, smoke tobacco products, have a diet with too much salt in it, or have diabetes are often at a higher risk for hypertension. As well, African Americans are more likely to have hypertension than other population groups.

Hypertension often develops over many years. Older people are most often diagnosed with hypertension. One reason for this is that blood vessels lose elasticity and stiffen as a person ages. This creates more resistance to the blood flowing through the body and elevates blood pressure.

Symptoms of hypertension can include blurred vision, headaches, a buzzing in the ears, fatigue, an irregular heartbeat, and nosebleeds. Hypertension that goes untreated over a period of time can lead to serious complications such as kidney disease, heart disease, loss of vision, heart attack, brain damage, and even early death. Fortunately, treating hypertension reduces blood pressure and can lower the risk of complications. For many people, losing weight can result in a significant decrease in blood pressure. For others, physicians may prescribe one or more medications to help bring blood pressure down into a safe range.

One thing is certain: physicians believe that people over the age of 20 should monitor their blood pressure by having it checked at least once a year. Those with a history of hypertension in the immediate family should have it checked more frequently.

5. What does the term *elasticity* mean, as used in the second paragraph?
- A. Firmness
 - B. Compactness
 - C. Flexibility
 - D. Rigidity
6. Which is the best title for this passage?
- A. "How to Manage Hypertension Successfully"
 - B. "Doctors Discover the Hidden Dangers of Hypertension"
 - C. "Doctors Work to Understand the Causes of Hypertension"

D. “Causes, Symptoms, Complications, and Management of Hypertension”

7. Which of the following statements is an opinion?

- A. Obese people are at risk for hypertension.
- B. Losing weight can decrease blood pressure.
- C. Older people must pay attention to their blood pressure.
- D. Blurred vision or dizziness may be a sign of hypertension.

8. Which statement would *not* be inferred by the reader?

- A. Maintaining a healthy weight may help to prevent hypertension.
- B. There is presently no reliable treatment for hypertension.
- C. Your ethnicity may contribute to your risk for hypertension.
- D. A 60-year-old is more likely to have hypertension than a teenager is.

Concussion

A concussion is a traumatic injury to the brain that can interfere with the way the brain processes information and functions. A concussion often results in severe headaches, diminished alertness, and even unconsciousness.

While more than one million people in the United States suffer concussions every year, many believe that, like people, no two concussions are identical. Recently two professional baseball players suffered concussions. The first player was injured early in the season and tried twice to return to regular play, but was not medically cleared to play until the following year. Even after eight months, this player reported a recurring condition of “fogginess” that seemed to linger. The second player had brief symptoms of sleepiness and involuntary movement, or “shakiness.” A few days later, and after several tests, the second player reported that the effects of the concussion had subsided, and he was cleared to play.

No matter the duration of a person’s recovery, refraining from trying to do too much, too soon is vital. A specialist at Boston University’s Center for the Study of Traumatic Encephalopathy believes that someone who

suffers a second concussion while still recovering from the first risks an even longer recovery.

Full recovery from concussions is possible. Problems are seldom permanent, and for most people who have had a concussion, the long-term prognosis is typically excellent. The first baseball player recently returned to his team. And though he was told by his physician that he has no greater risk than anyone else of suffering another concussion, other physicians believe that suffering one sports-related concussion increases the likelihood of suffering another.

9. Which of the following is *not* listed as a detail in the passage?
- A. Football and lacrosse players suffer the most concussions.
 - B. More than a million Americans a year suffer concussions.
 - C. Concussions may result in diminished alertness.
 - D. It may take longer to recover from a second concussion.
10. What is the meaning of the word *diminished* as used in the first paragraph?
- A. Miniature
 - B. Reduced
 - C. Recurrent
 - D. Hollow
11. Choose the best summary of the passage.
- A. No two concussions are alike. Some people may recover easily from concussion, while others may take weeks or months. In any case, receiving a second concussion too soon may mean a lengthy recovery.
 - B. When baseball players receive concussions, some take a long time to recover. Some may try to return to play too soon and receive a second concussion that ends their careers.
 - C. Although most athletes shrug off concussions, they would be wise to take them seriously. Multiple concussions can cause serious harm to the brain, which is rattled around in the skull with each injury.

D. Recovery from concussion is possible, but it is not always a good idea to return to play too soon. Some head injuries are called concussions but do not really qualify as such.

12. What is the author's primary purpose in writing this essay?

- A. To entertain
- B. To analyze
- C. To reflect
- D. To inform

13. Which statement would *not* be inferred by the reader?

- A. Athletes should be careful after a first concussion.
- B. Severe headache after a fall may be a sign of concussion.
- C. Sports-related concussions are riskier than other kinds.
- D. Symptoms of concussion may linger for more than six months.

Sickle-Cell Anemia

Healthy red blood cells are shaped like a disc. Each cell contains the protein hemoglobin, which carries oxygen throughout the body. In some people, a crescent-shaped cell forms instead of the normal disc-shaped cell. The crescent-shaped cells contain abnormal hemoglobin. These sickle-shaped cells are fragile and are unable to carry oxygen properly throughout the body.

Sickle-cell anemia is an inherited disease that affects about 72,000 people in the United States. It is more common among people of South American or African descent. The genes for sickle-cell anemia are inherited from both parents. When both parents carry a gene for the trait for sickle-cell, there is a one in four chance that they will pass the disease on to their children.

Symptoms of sickle-cell anemia can include sudden occurrences of extreme abdominal and back pain, bone pain, fever, fatigue, and a rapid heart rate. One patient compared the pain in his back to a jackhammer and said the pain could take over his entire body. Another patient, an eight-year-

old girl, described fevers and the feeling of someone squeezing her arms and legs.

Cycles of symptoms are often unpredictable and can occur infrequently or almost constantly. Some people who are affected report weekly occurrences of persistent pain, while others report occurrences once a month. Some report that relief comes only by using powerful painkillers. For others, relief comes with bed rest and a hot-water bottle. Most agree that while the challenges of managing sickle-cell anemia are great, with diligent care, it can be managed.

14. What is the main idea of the passage?
- A. Bone pain is a typical sign of sickle-cell anemia.
 - B. Without enough oxygen, the body can break down.
 - C. Genetically inherited diseases affect thousands.
 - D. Sickle-cell anemia is a painful, inherited disease.
15. What is the meaning of the word *diligent* as used in the last paragraph?
- A. Dispersed
 - B. Incensed
 - C. Painstaking
 - D. Demanding
16. Identify the overall tone of the essay.
- A. Informal
 - B. Insensitive
 - C. Grim
 - D. Uplifting
17. Which of the following is *not* listed as a detail in the passage?
- A. People of African descent may be prone to sickle-cell anemia.
 - B. Symptoms of sickle-cell anemia may include abdominal pain.
 - C. The red blood cells of sickle-cell patients are unusually shaped.
 - D. Vitamin and mineral deficiencies may result in some anemia.

Toxins and Your Health

Lie out in the sun too much today—and get skin cancer 20 years from now. Smoke too many cigarettes now—and get lung cancer decades down the road. Now there is potentially a third danger to add to this list: be exposed to too much lead, pesticides, or mercury now and have your aging brain become seriously confused during your senior years.

“We’re trying to offer a caution that a portion of what has been called normal aging might in fact be due to ubiquitous environmental exposures like lead,” says Dr. Brian Schwartz of Johns Hopkins University. “The fact that it’s happening with lead is the first proof of the principle that it’s possible.”

A new area of medical research is one that studies how exposure to toxic elements in younger years can result in serious health problems in senior years. It is difficult to research these problems because the only way to do so is to observe people over many years.

Physicians test for lead amounts by seeing how much has accumulated in a person’s shinbone. Testing the blood also often reveals amounts of lead, but that is a sign of recent, not lifelong, exposure. The higher the lifetime lead dose, according to the study, the worse the performance of mental functions, including verbal and visual memory and language ability.

18. A reader might infer from this passage that _____.
- A. most dangerous lead exposure happens later in life
 - B. doctors are concerned about what happens to the brain during aging
 - C. shinbones are good indicators of many health ailments or conditions
 - D. blood tests are the best way to measure individuals’ lifetime lead exposure
19. Which of the following statements is an opinion?
- A. Smoking cigarettes today may lead to lung cancer later.
 - B. Doctors are studying the results of exposure to toxic elements.
 - C. People with dementia should be tested for lead exposure.
 - D. Researchers test the shinbone to look for built-up toxins.

20. What is the meaning of the word *exposed* as used in the first paragraph?
- A. Uncovered
 - B. Subjected
 - C. Visible
 - D. Divulged
21. What is the main idea of the passage?
- A. Environmental toxins may have dire health effects over time.
 - B. Of three toxins studied, lead has the worst effect on health.
 - C. Toxins may accumulate in the bones of older patients.
 - D. Johns Hopkins University has discovered a new use for lead.

Yoga

Yoga is an exercise that everyone should try. Yoga was first practiced thousands of years ago. It helps connect the mind and body by taking a person through a series of poses while emphasizing controlled breathing and meditation. Every year hundreds of thousands of people enjoy the benefits of yoga by treating the movements and postures as exercise.

Yoga works by safely stretching muscles, ligaments, and tendons. This helps release the buildup of lactic acid in the muscles that can often cause stiffness, tension, and even pain. Yoga helps develop the body's range of mobility and increases the ease of everyday movements. Many participants report improved flexibility, especially in the trunk and shoulders, after only two months of practice. Yoga improves posture, balance, and sleep, and it also helps with weight control.

Physically, many yoga poses help build upper-body strength, which is increasingly important as the body ages. Other poses help strengthen the muscles in the lower back, and when properly practiced, nearly all of the poses strengthen the body's abdominal, or core, muscles. This helps improve the circulation of blood that increases the delivery of nutrients and oxygen to the body and also removes wastes produced by the body. When

combined with yoga's benefit of lowering a person's heart rate, the result is increased cardiovascular endurance.

The University of Maryland School of Nursing recently published a study that showed yoga was especially effective at reducing stress. In addition, researchers found that yoga surpassed traditional aerobic exercise, often significantly, in improving flexibility, pain tolerance, and daily energy levels. One enthusiast says that her advice to skeptics is simple, "Take a deep breath, stretch, and indulge in a few poses. You'll feel better."

22. Identify the overall tone of the essay.
- A. Earnest
 - B. Negative
 - C. Self-satisfied
 - D. Skeptical
23. What is the meaning of the word *tolerance* as used in the last paragraph?
- A. Open-mindedness
 - B. Approval
 - C. Endurance
 - D. Generosity
24. The passage lists all of these benefits of yoga EXCEPT.
- A. improved circulation
 - B. strengthening of core muscles
 - C. stress reduction
 - D. fortification of immune system
25. What is the author's primary purpose in writing this essay?
- A. To persuade
 - B. To entertain
 - C. To analyze
 - D. To reflect

Super Foods

Super foods are whole, unprocessed foods such as blueberries, walnuts, beans, oats, and broccoli. Spinach, yogurt, and pomegranates are also super foods. They are classified as such because they contain high levels of essential nutrients, are low in calories, and can often help prevent—and even reverse—some of the common effects of aging including cardiovascular disease, type 2 diabetes, high blood pressure, and certain types of cancer. Super foods help lower cholesterol levels in the blood and, some researchers believe, even improve a person's mood.

High on the list of super foods are blueberries, fresh or frozen, which are loaded with vitamin C, antioxidants, and potassium. Blueberries are also an anti-inflammatory, which many researchers and nutritionists believe is beneficial.

Lentils are a super food that helps prevent a spike in insulin levels that can increase body fat. Lentils are high in both fiber and protein, each of which contributes to stabilizing blood sugar levels and reducing excess fat, especially in the stomach area. Walnuts are a plant-based source of essential unsaturated omega-3 fatty acids, which can improve cholesterol and lower the risk of heart disease by as much as 50 percent. All oats are healthful. Oats, even instant oatmeal, are digested slowly while providing up to five grams of fiber per serving.

As physicians and nutritionists continue to study super foods and their effects, consumers continue to educate themselves about the variety of benefits. In an era when consumers question the origin and nutritional value of much of the food on store shelves, super foods are some of the most healthful and natural whole foods available.

- 26.** The passage mentions all of the following claims for the health benefits of super foods EXCEPT _____.
- A. lowering cholesterol
 - B. stabilizing insulin levels
 - C. building muscle mass
 - D. reducing blood pressure

27. What is the meaning of the word *unprocessed* as used in the first paragraph?
- A. Natural and untreated
 - B. Made of vegetable matter
 - C. Home grown
 - D. Uncirculated or undigested
28. Which statement would *not* be inferred by the reader?
- A. Instant oatmeal can be part of a healthful breakfast.
 - B. Blueberries are an especially healthful food.
 - C. Certain grains and dairy products are super foods.
 - D. Super foods are more expensive than processed foods.
29. Which of the following statements is an opinion?
- A. Walnuts contain omega-3 fatty acids.
 - B. Lentils are high in both protein and fiber.
 - C. Pomegranates are delicious and healthful.
 - D. Oats move slowly through the digestive tract.
30. What is the main idea of the passage?
- A. Super foods are low in calories but provide essential nutrients that have enormous health benefits.
 - B. U.S. supermarkets should make a point of stocking up on powerful super foods.
 - C. Blueberries are a super food that contains a natural inflammatory as well as important vitamins and minerals.
 - D. Doctors now believe that daily inclusion of super foods in the diet can reverse the aging process.

Aromatherapy—Fact or Fiction?

For years, aromatherapy has been touted as a safe and natural way to relax and even heal. Essential oils from a variety of scents have been added to

candles and sprays to help people feel better. However, a recent study performed at Ohio State University says that these smells, as nice as they may be, do not do a thing to improve people's health.

To find out if aromatherapy actually works, the researchers tested two of the most popular scents: lemon and lavender. First, test subjects had their heart rate, blood pressure, stress hormones, and immune function measured and noted. Next, they were subjected to mild stressors and then told to sniff one of the scents to see if the scent would help them to relax. Finally, all the subjects were tested again to look for improvement. No significant changes were noted—even in people who had previously stated they were true believers in the power of aromatherapy.

Of course, this does not necessarily prove that aromatherapy is worthless, either. It was just one small study, pitted against the opinions of thousands of consumers who swear by peppermint on their pillow for an upset stomach or vanilla for a headache. More tests will be done, but in the meantime, a whiff of lavender, lemon, or other scents will certainly do no harm—and can be quite pleasant at the same time.

- 31.** Which of the following is a conclusion that a reader can draw from this passage?
- A. Aromatherapy is not a legitimate therapy by anyone's standards.
 - B. Lemon and lavender are not healthy scents to inhale or use.
 - C. More studies are needed to determine if aromatherapy is truly beneficial.
 - D. Adding aromatherapy to regular treatment will help speed healing.
- 32.** What is the meaning of the word *touted* as used in the first paragraph?
- A. Revealed
 - B. Glorified
 - C. Overcome
 - D. Deceived
- 33.** Identify the overall tone of the essay.
- A. Congratulatory
 - B. Uncertain

- C. Annoyed
- D. Distressed

34. Which of the following is *not* listed as a detail in the passage?

- A. Subjects were given mild stressors.
- B. Lemon and lavender scents were tested.
- C. Vanilla worked better than lemon for stress.
- D. The study took place at Ohio State University.

An Old Form of Running Is New Again

Barefoot running is a rapidly growing movement that encourages people to leave their shoes at home and take to the streets in only their bare feet. Barefoot running advocates are quick to point out that while shoe technology has advanced significantly since the advent of the modern running shoe, there has been little decline in the number of injuries that occur from running.

Humankind has been running for millions of years, and modern running shoes have existed for less than 50 years. By wearing larger shoes with excessive cushioning we are changing the biomechanics of how we run, thereby increasing the likelihood for injury. Early humans ran with a “forefoot strike,” landing closer to the balls of their feet and using their foot’s natural arch as a spring to store and release energy. Modern shoe designs encourage a “heel strike,” landing on the heel and rolling forward to the toe. Barefoot running advocates believe “heel striking” replaces your reliance on the natural mechanics of your feet with the cushioning provided by your shoes, and that this is what causes many of the injuries affecting runners today.

Critics assert that while our feet may have been designed for barefoot running, our road surfaces were not. Concrete and asphalt are much firmer than any surface where our human ancestors would have been running. Broken glass and debris also may make barefoot running a significant challenge.

There is little consensus when it comes to the safety and effectiveness of barefoot running, but even the most skeptical of podiatrists will agree that

wearing heavily padded shoes too often can result in a weaker foot and leg structure. Spend some extra time walking barefoot around your house; aside from building up the muscles and tendons that strengthen your feet, you may just find yourself tempted to go for a run.

35. Which might be a good title for this passage?
- A. “Everyone Should Run Barefoot”
 - B. “How to Prevent Running Injuries”
 - C. “Modern Road Surfaces Versus Barefoot Running”
 - D. “The Debate over Barefoot Running”
36. What is the meaning of the word *consensus* as it is used in the last paragraph?
- A. Investigation
 - B. Purpose
 - C. Trepidation
 - D. Unanimity
37. Which statement would *not* be inferred by the reader?
- A. Runners who take their shoes off may face some hazards.
 - B. Modern running shoes may increase the odds for injury.
 - C. Walking barefoot is good for the muscles and tendons.
 - D. Before 1950, even Olympic runners ran barefoot.
38. Which of the following statements is an opinion?
- A. Running barefoot is natural and advantageous.
 - B. The cost of modern running shoes keeps increasing.
 - C. Concrete sidewalks are harder than dirt paths.
 - D. The arch of the foot gives a spring to the step.

The Sleep Workout

Developing muscle growth is an effective way to stay healthy as we get older, but many people find it difficult to develop this muscle growth, even after modifying their exercise routine and food intake. What many people may not realize is that getting the proper amount of uninterrupted sleep plays a major role in the development of muscle.

The hard work of developing muscle is done in the gym, on a track, or on the court, but the actual growth takes place during the rest periods that follow a workout. Your body immediately begins rebuilding the muscle fibers that were broken down during the course of your workout. Much of this process is carried out while you are sleeping, so without a full night of sleep, muscle fibers will not have the opportunity to rebuild.

Human growth hormone (HGH) is an amino acid that is central to regulating metabolism, building muscle, facilitating calcium retention, and stimulating the immune system. The amount of HGH in your body spikes significantly during deep sleep, which makes getting at least 7 to 10 hours of sleep every night imperative to anyone hoping to develop additional muscle growth.

Recent studies have linked inadequate amounts of sleep to lowered levels of leptin, a hormone in the brain that controls appetite. Test subjects who received less sleep, or frequently interrupted sleep, would crave carbohydrates even after their caloric needs reached satiety. This can contribute to obesity and negatively affect any good habits people may have developed with regard to food intake.

39. What is the main idea of the passage?

- A. Insufficient sleep can lead to obesity.
- B. Insufficient sleep inhibits the natural release of human growth hormone in the human body.
- C. Getting the proper amount of uninterrupted sleep plays a major role in the development of muscle.
- D. Developing muscle growth is an effective way to stay healthy as we get older.

40. The term *satiety*, as used in the last paragraph, can best be defined as

_____.

- A. a state of tiredness
 - B. a state of being satisfied
 - C. a state of being overloaded
 - D. a state of confusion
41. In this passage, which of the following is *not* mentioned as a role of HGH in the human body?
- A. Regulating the metabolism
 - B. Stimulating the immune system
 - C. Regulating leptin, an appetite-controlling hormone
 - D. Facilitating calcium retention
42. What conclusion can the reader draw after reading this passage?
- A. Getting uninterrupted sleep is more important than getting enough sleep.
 - B. Insufficient sleep may result in an increased risk for obesity.
 - C. Human growth hormone is not essential for muscle development.
 - D. Leptin is essential for building muscle.

Sunny-Side Up

Most people are familiar with the damaging effects of the sun on unprotected skin, but not enough attention is paid to the many positive effects of receiving direct exposure to sunlight on a regular basis.

The most compelling argument for increased exposure to sunlight is the need for vitamin D in the human body. Vitamin D is integral for maintaining healthy bones and preventing diseases like rickets and osteoporosis. It is synthesized by the skin when it comes into contact with the UVB rays found in sunlight. In order to ensure you are receiving the proper amount of vitamin D, it is recommended to get 15 minutes of direct exposure to sunlight at least two or three times a week. UVB rays are made less intense when passing through clouds and pollution, and they will not transmit through glass or sunscreen. UVB rays are also less effective the

farther you are from the equator. People with darker skin require more exposure to the sun to receive the same amount of vitamin D.

In addition to vitamin D, sunlight will help regulate the circadian rhythms that ensure you get a good night's sleep. Sunlight helps to prevent an overactive immune system, which may prove useful in preventing autoimmune diseases like psoriasis and lupus. Recent studies have even shown that sunlight can help lessen the symptoms of Alzheimer's disease.

The negative impacts of excess exposure to sunlight should not be ignored; cancers resulting from skin damage are a real concern that must be taken seriously. But the importance of vitamin D and the other positive impacts of sunlight make a compelling argument for making sure we are spending enough time every week in direct sunlight.

43. What is the main idea of the passage?

- A. There are many positive effects of receiving direct exposure to sunlight.
- B. The negative impacts of sunlight should not be ignored.
- C. Vitamin D is integral for maintaining healthy bones and preventing diseases.
- D. Vitamin D is synthesized by our bodies in reaction to direct sunlight.

44. The term *compelling*, as used in the second paragraph, can best be defined as _____.

- A. reasonable
- B. convincing
- C. common
- D. worthwhile

45. What is the author's primary purpose in writing this essay?

- A. To persuade
- B. To reflect
- C. To entertain
- D. To analyze

46. Identify the overall tone of the essay.

- A. Confused
- B. Confident
- C. Disheartened
- D. Disapproving

47. Choose the best summary of the passage.

- A. Light-skinned people need a maximum of 15 minutes a day in direct sunlight to achieve the benefits of the sun's rays. Dark-skinned people may need far more time in the sun to reap the same benefits.
- B. Spending too much time indoors can wreak havoc with your circadian rhythms, leach vitamin D from your bones, and damage your immune system. Exercising outdoors in direct sunlight or in a room with clear glass is recommended.
- C. Although negative effects of sunlight are well known, people should be aware that some sunlight is necessary and beneficial. Exposure to sunlight increases vitamin D, improves sleep, and prevents hyperactivity of the immune system.
- D. You can avoid direct sunlight but still reap the benefits of a day in the sun by using sunscreen or tinted glass. The effects of vitamin D are beneficial, so it is wise to spend some time outdoors while being fully protected from the dangerous rays.

VOCABULARY AND GENERAL KNOWLEDGE

50 items

Suggested time: 50 minutes

1. Select the meaning of the underlined word in the following sentence.

Due to his mercurial temperament, Justin did not work well with others.

- A. Continuous
- B. Unpredictable
- C. Mercenary
- D. Miraculous

2. What is another word for *elated*?

- A. Edified
- B. Confused
- C. Flabbergasted
- D. Delighted

3. What is the meaning of *disregard*?

- A. Have no opinion about
- B. Pay attention to
- C. Care for
- D. Ignore

4. Select the meaning of the underlined word in the following sentence.

People with weakened immune systems should avoid exposure to flu.

- A. Disclosure
- B. Pretense
- C. Contact
- D. Display

5. If a patient's condition is deteriorating, he is _____.

- A. getting worse
- B. improving gradually
- C. resisting medication

D. failing to eat or drink

6. *Precipitous* is best defined as being _____.

- A. damp
- B. gentle
- C. swift
- D. dull

7. Select the meaning of the underlined word in the following sentence.

Being overweight may predispose a person to diabetes.

- A. Make susceptible
- B. Bring to light
- C. Save from harm
- D. Pass over

8. A condition that is ongoing is _____.

- A. rapid
- B. continuous
- C. partial
- D. complete

9. A paroxysm is a sudden spasm. Another word for this might be _____.

- A. convulsion
- B. symptom
- C. efficacy
- D. embolism

10. A restricted diet is _____.

- A. low in fat
- B. vegetarian
- C. banned
- D. limited

11. What is another word for *cicatrix*?

- A. Beetle
- B. Scalpel
- C. Antidote
- D. Scar

12. Select the meaning of the underlined word in the following sentence.

Calcium pills may be used to supplement your diet.

- A. Replace
- B. Add to
- C. Reflect
- D. Parallel

13. Select the meaning of the underlined word in the following sentence.

The patients are under quarantine until further notice.

- A. A specialist's care
- B. Experimental drug therapy
- C. Imprisonment in a rehabilitation unit
- D. Confinement away from the general population

14. Which word names a medicine whose purpose is to induce vomiting?

- A. Opiate
- B. Narcotic
- C. Emetic
- D. Prophylactic

15. What is another word for *panacea*?

- A. Clinician
- B. Painkiller
- C. Vista
- D. Cure

16. What is the meaning of *principally*?

- A. Mostly

A. 48

B. 52

C. 54

D. 56

31. Express $\frac{7}{4}$ as a decimal.

A. 1.25

B. 1.45

C. 1.75

D. 1.95

32. How many feet are in 6 meters?

A. 1.83 feet

B. 18.48 feet

C. 18.8 feet

D. 19.68 feet

33. Express the ratio of 25:80 as a percentage.

A. 31.25%

B. 34%

C. 41.25%

D. 43.75%

34. A package of 10 pencils is divided between every 2 students in class. If there are 20 students in class, then how many pencils are needed?

A. 20

B. 40

C. 80

D. 100

35. What date in Arabic numerals is Roman numeral MCCIV? (Enter numeric value only.)

36. A certain number is 7 less than the product of 18 and 4. What is the value of that number?

- A. 63
- B. 65
- C. 72
- D. 79

37. Multiply: $0.15 \times 0.52 =$

- A. 0.0078
- B. 0.078
- C. 0.78
- D. 7.8

38. Multiply: $2.4 \times 4.2 =$

- A. 1.008
- B. 10.08
- C. 10.8
- D. 18

39. If the outside temperature on a sunny day is 82 degrees on the Fahrenheit scale, what is the approximate temperature on the Celsius scale?

- A. 18°C
- B. 24°C
- C. 28°C
- D. 50°C

40. In a scale drawing for a garden, $2 \text{ cm} = 1 \text{ m}$. If the garden measures 8 cm by 10 cm in the drawing, how large will it be in reality?

- A. 2 m by 3 m
- B. 4 m by 5 m
- C. 8 m by 10 m
- D. 16 m by 20 m

41. Gerald can bake 3 dozen cookies in 30 minutes. How long will it take him to bake 12 dozen cookies?

- A. 90 minutes
- B. 1 hour 40 minutes
- C. 2 hours
- D. 4 hours

42. Divide: $8.11 \div 5 =$

- A. 1.424
- B. 1.622
- C. 1.672
- D. 1.724

43. Subtract and simplify: $\frac{5}{9} - \frac{2}{5} =$

- A. $\frac{7}{15}$
- B. $\frac{2}{45}$
- C. $\frac{7}{45}$
- D. $\frac{11}{15}$

44. The Soap Factory is selling 3 bars of almond-scented soap for \$2.58. What would it cost to buy 5 bars of soap?

- A. \$3.30
- B. \$3.80
- C. \$4.30
- D. \$4.80

45. Subtract and simplify $4\frac{1}{5} - 2\frac{2}{3}$.

- A. $2\frac{1}{15}$
- B. $1\frac{4}{5}$
- C. $1\frac{2}{3}$
- D. $1\frac{8}{15}$

46. Express $\frac{2}{5}$ as a decimal.

- A. 0.2
- B. 0.25
- C. 0.4
- D. 2.5

47. 18 is 25% of what number? (Enter numeric value only.)

48. Callie makes 2% interest quarterly on a deposit of \$100. After a year, about how much is in her account?

- A. \$102
- B. \$104
- C. \$106
- D. \$108

49. Patient X usually ingests about 2,000 calories daily. If Patient X is placed on a regimen that cuts that daily intake by 20%, how many calories will Patient X consume in a week? (Enter numeric value only.)

50. How many teaspoons are there in 3 tablespoons?

- A. 9 teaspoons
- B. 10.5 teaspoons
- C. 12 teaspoons
- D. 18 teaspoons

BIOLOGY

25 items

Suggested time: 25 minutes

1. Which organelle is responsible for protein synthesis?
 - A. Mitochondrion
 - B. Vacuole
 - C. Cell membrane
 - D. Ribosome
2. Why is yeast used to make bread rise?
 - A. It engages in photosynthesis, which produces oxygen gas.
 - B. Carbon dioxide forms while yeast carries out photosynthesis.
 - C. Yeast carries out fermentation, producing ethanol and carbon dioxide.
 - D. Yeast breathes in oxygen and produces carbon dioxide through aerobic respiration.
3. How is mitosis different from meiosis?
 - A. Mitosis is the process by which sex cells are formed.
 - B. Meiosis creates cells with half the chromosomes of the parent cell.
 - C. Telophase does not take place in mitosis.
 - D. Spermatogenesis and oogenesis occur via mitosis.
4. Which statement is untrue?
 - A. RNA is single-stranded.
 - B. RNA contains uracil.
 - C. DNA codes for proteins.

- D. DNA cannot be altered.
5. Imagine that two parents both carry the recessive gene for cystic fibrosis. Any homozygous recessive offspring will manifest the disease. What percentage of the offspring is predicted to be carriers but not manifest the disease?
- A. 0%
 - B. 25%
 - C. 50%
 - D. 100%
6. A cell is in a solution in which the concentration of solutes is higher inside the cell than outside the cell. What would you expect to happen to the cell?
- A. It will swell and possibly burst.
 - B. It will shrivel and shrink.
 - C. It will maintain its current size.
 - D. It will grow a supportive cell wall.
7. What is the purpose of phloem tissue in plant stems?
- A. It conducts water up through the stem.
 - B. It conducts the energy of light to leaves.
 - C. It conducts food throughout the plant.
 - D. It conducts carbon dioxide throughout the plant.
8. Physical factors such as temperature and pH can alter enzyme activity because they have an effect on the enzyme's _____.
- A. acidity
 - B. shape
 - C. chemistry
 - D. substrate
9. Which part of a plant's reproductive system is of a different "gender" than the others?

- A. Stamen
 - B. Pistil
 - C. Stigma
 - D. Style
10. What kind of symbiosis exists between a pneumonia bacterium and a human?
- A. Mutualism
 - B. Parasitism
 - C. Commensalism
 - D. Competition
11. The scientific name for a house cat is *Felis catus*. This indicates the house cat's _____ and _____.
- A. kingdom; family
 - B. order; subspecies
 - C. phylum; class
 - D. genus; species
12. Beeswax is an example of what kind of molecule?
- A. Lipid
 - B. Carbohydrate
 - C. Protein
 - D. Nucleic acid
13. What takes place in a lysosome?
- A. Ribosomes are made.
 - B. Food is produced.
 - C. Water is stored.
 - D. Food is digested.
14. Which organism reproduces via binary fission?
- A. Mushroom

- B. Blue whale
 - C. Rainbow trout
 - D. Salmonella
15. In which phase of cell division do the chromosomes replicate?
- A. Prophase
 - B. Interphase
 - C. Anaphase
 - D. Telophase
16. In a strand of DNA, you would expect to see adenine paired with _____.
- A. cytosine
 - B. uracil
 - C. thymine
 - D. guanine
17. Hemophilia is a sex-linked trait carried on the X chromosome. In an example of a male with hemophilia and a female carrier, what ratio of the offspring is predicted to have the disease?
- A. 0 female : 2 male
 - B. 1 female : 0 male
 - C. 1 female : 2 male
 - D. 2 female : 1 male
18. What is represented by this formula: $6\text{CO}_2 + 6\text{H}_2\text{O} \rightarrow \text{C}_6\text{H}_{12}\text{O}_6 + 6\text{O}_2$?
- A. Glycolysis
 - B. Cellular respiration
 - C. Photosynthesis
 - D. Electronic transport
19. Three students measured the mass of a product of combustion. They recorded measurements of 5.14 g, 5.16 g, and 5.17 g. If the known

mass of the product is 5.30 g, how would you describe the students' measurements?

- A. Accurate
- B. Precise
- C. Both accurate and precise
- D. Neither accurate nor precise

20. Which statement regarding energy content is true?

- A. Decomposers > secondary consumers
- B. Primary consumers > producers
- C. Producers > secondary consumers
- D. Secondary consumers > primary consumers

21. How should a researcher test the hypothesis that eating chocolate leads to acne in teenagers?

- A. Take 100 teenagers and feed each one a different amount of chocolate daily for 60 days; then test for acne.
- B. Take 100 teenagers and feed 50 two bars of chocolate daily for 60 days while the other 50 eat no chocolate; then test for acne.
- C. Take 1 teenager and feed him or her two bars of chocolate for 30 days and no chocolate for 30 days; then test for acne.
- D. Take 100 teenagers and feed them no chocolate for 30 days and two bars of chocolate apiece for 30 days; then test for acne.

22. Which is *not* a step in the water cycle?

- A. Condensation
- B. Transpiration
- C. Nitrification
- D. Absorption

23. Why do we perceive chlorophyll as green?

- A. It absorbs yellow and blue light.
- B. It primarily absorbs green light.

- C. It fails to absorb green light.
 - D. It primarily absorbs red light.
24. Why are bacteria and blue-green algae often classified together?
- A. Both are gymnosperms.
 - B. Both are prokaryotes.
 - C. Both are autotrophs.
 - D. Both are pathogens.
25. Which of these molecules contains glucose?
- A. Proteins
 - B. Lipids
 - C. Nucleic acids
 - D. Carbohydrates

<p>STOP. IF YOU HAVE TIME LEFT OVER, CHECK YOUR WORK ON THIS SECTION ONLY.</p>

CHEMISTRY

25 items

Suggested time: 25 minutes

1. Carbon-12 and carbon-14 are isotopes. What do they have in common?
- A. Number of nuclear particles
 - B. Number of protons
 - C. Number of neutrons
 - D. Mass number
2. A substance with a pH of 3 is how many times more acidic than a substance with a pH of 5?
- A. 8

- B. 2
 - C. 100
 - D. 1,000
3. Radioactive isotopes are frequently used in medicine. What kind of half-life would a medical isotope probably have?
- A. Seconds long
 - B. Days long
 - C. Year long
 - D. Many years long
4. When an acid is added to a base, water and a salt form. What kinds of bonds form in these two compounds?
- A. Liquid and metallic
 - B. Polar and nonpolar covalent
 - C. Polar covalent and ionic
 - D. Ionic only
5. $\text{Al}(\text{NO}_3)_3 + \text{H}_2\text{SO}_4 \rightarrow \text{Al}_2(\text{SO}_4)_3 + \text{HNO}_3$ is an example of which kind of reaction?
- A. Decomposition reaction
 - B. Synthesis reaction
 - C. Single replacement reaction
 - D. Double replacement reaction
6. B, Si, As, Te, At, Ge, and Sb form a staircase pattern on the right side of the periodic table. How can these elements be classified?
- A. As metals
 - B. As semimetals
 - C. As nonmetals
 - D. As ultrametals

7. If gas A has four times the molar mass of gas B, you would expect it to diffuse through a plug _____.
- A. at half the rate of gas B
 - B. at twice the rate of gas B
 - C. at a quarter the rate of gas B
 - D. at four times the rate of gas B
8. Which of the following is *not* an allotrope of carbon?
- A. Diamonds
 - B. Graphite
 - C. Fluorine
 - D. Buckminsterfullerene
9. Which of these factors would *not* affect rates of reaction?
- A. Temperature
 - B. Surface area
 - C. Pressure
 - D. Time
10. You would expect an amino acid to contain which two functional groups?
- A. R-NH₂ and R-COOH
 - B. R-CHO and R-CO-NH₂
 - C. R-OH and R-COOR
 - D. R-O-R and R-COOH
11. What is the coefficient of O₂ after the following equation is balanced?

- A. 1
- B. 2
- C. 3

D. 4

12. Which element would you expect to be least reactive?

- A. Li
- B. Cr
- C. Nd
- D. Xe

13. Which is a property of an ionic compound?

- A. Low melting point
- B. Poor conductivity
- C. Shared electrons
- D. Crystalline shape

14. How many neutrons are in an atom of uranium-235?

- A. 92
- B. 125
- C. 143
- D. 235

15. What is the correct electron configuration for lithium?

- A. $1s^2 2s^1$
- B. $1s^2 2s^2$
- C. $1s^2 2s^1 2p^1$
- D. $1s^1 2s^1 2p^2$

16. The molar mass of glucose is 180.0 g/mol. If an IV solution contains 5 g glucose in 100 g water, what is the molarity of the solution?

- A. 0.28M
- B. 1.8M
- C. 2.8M
- D. 18M

17. Which ion would you expect to dominate in water solutions of bases?
- A. MgCl_2
 - B. 2HCl
 - C. H^+
 - D. OH^-
18. To the nearest whole number, what is the mass of one mole of water?
- A. 16 g/mol
 - B. 18 g/mol
 - C. 20 g/mol
 - D. 22 g/mol
19. What is the charge of an alpha particle?
- A. -1
 - B. +1
 - C. +2
 - D. No charge
20. What is the correct name of AgNO_3 ?
- A. Argent nitrous
 - B. Argent oxide
 - C. Silver nitrite
 - D. Silver nitrate
21. What is the oxidation state of the chlorine atom in the compound HCl ?
- A. +1
 - B. -1
 - C. +2
 - D. -2
22. Which of these types of intermolecular force is strongest?
- A. Dipole-dipole interaction

- B. London dispersion force
 - C. Keesom interaction
 - D. Hydrogen bonding
23. A salt solution has a molarity of 1.5 M. How many moles of this salt are present in 2.0 L of this solution?
- A. 0.75
 - B. 1.5
 - C. 2.0
 - D. 3.0
24. What is the correct formula for silver hydroxide?
- A. AgO_2
 - B. AgOH
 - C. AgOH_2
 - D. AgH_2O
25. Which gives the number of protons in the atomic nucleus of an alkali metal?
- A. 9
 - B. 10
 - C. 11
 - D. 12

<p>STOP. IF YOU HAVE TIME LEFT OVER, CHECK YOUR WORK ON THIS SECTION ONLY.</p>

ANATOMY AND PHYSIOLOGY

25 items

Suggested time: 25 minutes

1. Which is an anterior muscle?
 - A. Gluteus maximus
 - B. Quadriceps femoris
 - C. Biceps femoris
 - D. Adductor magnus
2. How might the headrest on a car prevent traumatic injury?
 - A. By limiting hyperflexion of the neck
 - B. By limiting hyperextension of the neck
 - C. By reducing vertebral compression
 - D. By preventing disc degeneration
3. Which might you expect to see in a whiplash injury?
 - A. Cardiopulmonary problems
 - B. Side-to-side spinal curvature
 - C. Eventual herniation of discs
 - D. Traumatic injury to ligaments
4. Muscle contractions that normally move food along the human digestive system are known as _____.
 - A. defecation
 - B. osmosis
 - C. peristalsis
 - D. circulation
5. Which type of nutrient does *not* provide the body with energy?
 - A. Vitamin
 - B. Carbohydrate
 - C. Fat
 - D. Protein
6. Where would you be likely to find a Schwann cell?
 - A. In the digestive system

- B. In the nervous system
 - C. In the skeletal system
 - D. In the muscular system
7. How does the nervous system work with the muscular system?
- A. The muscles of the body produce chemicals that feed the nerves.
 - B. The nervous system tells the muscles how to respond to the environment.
 - C. The nervous system releases chemicals that remove excess waste from the muscles.
 - D. The muscular system provides input that allows the nerves to make decisions.
8. Which part of the nervous system includes the femoral, radial, and ulnar nerves?
- A. Somatic
 - B. Autonomic
 - C. Sympathetic
 - D. Parasympathetic
9. Where might a herniated lumbar disc be most likely to create pain?
- A. Along the radial nerve
 - B. Within the spinal cord
 - C. Along the sciatic nerve
 - D. Along the tibial nerve
10. What is the name of the bone in the human thigh?
- A. Ulna
 - B. Femur
 - C. Radius
 - D. Humerus
11. The ovaries are part of the _____.

- A. skeletal system
 - B. nervous system
 - C. lymphatic system
 - D. reproductive system
12. Of the following processes, which one is a different level of defense from the others?
- A. A low pH in the stomach
 - B. Cilia present in the trachea
 - C. Body cells recognizing a pathogen
 - D. Mucus present in the nasal cavity
13. Which organ system is primarily responsible for regulating muscle growth?
- A. The skeletal system
 - B. The endocrine system
 - C. The nervous system
 - D. The reproductive system
14. Which parts of the heart are separated by the mitral valve?
- A. Left atrium and right atrium
 - B. Right atrium and right ventricle
 - C. Left ventricle and right ventricle
 - D. Left atrium and left ventricle
15. How might vitamin D deficiency present?
- A. As bleeding gums
 - B. As swollen extremities
 - C. As red patches
 - D. As crooked bones
16. How does the lymphatic system work with the circulatory system?

- A. The circulatory system produces red blood cells for the lymphatic system.
 - B. Lymph draws excess fluid from the cells and deposits it into the blood vessels.
 - C. The heart regulates the production of lymph in the lymph glands.
 - D. White cells from the lymphatic system eliminate excess red blood cells.
17. What is the function of parathyroid hormone?
- A. Increasing energy levels
 - B. Stimulating cell reproduction
 - C. Speeding up metabolism
 - D. Activating vitamin D
18. Which feature of the ear is most medial?
- A. Pinna
 - B. Tympanic membrane
 - C. Cochlea
 - D. Outer canal
19. Which of the following are considered normal values for the measure of a person's pulse and blood pressure?
- A. 55 beats per minute and 75 over 60 mm Hg
 - B. 72 beats per minute and 120 over 80 mm Hg
 - C. 100 beats per minute and 140 over 100 mm Hg
 - D. 160 beats per minute and 100 over 70 mm Hg
20. How does a sagittal section divide the body?
- A. Into right and left regions
 - B. Into upper and lower regions
 - C. Into front and back regions
 - D. Between the dorsal and ventral cavities

21. How is pepsin used by the body?
- A. To break down proteins
 - B. To break down starches
 - C. To emulsify fats and oils
 - D. To absorb water and nutrients
22. The esophagus is part of the _____.
- A. endocrine system
 - B. digestive system
 - C. respiratory system
 - D. nervous system
23. Which mineral supports the function of the thyroid?
- A. Manganese
 - B. Iodine
 - C. Phosphorus
 - D. Zinc
24. The cheekbones are _____ to the nose.
- A. anterior
 - B. proximal
 - C. deep
 - D. lateral
25. Which organ system is primarily responsible for generating antibodies?
- A. The endocrine system
 - B. The digestive system
 - C. The lymphatic system
 - D. The nervous system

PHYSICS

25 items

Suggested time: 50 minutes

1. When a junked car is compacted, which statement is true?
 - A. Its mass increases.
 - B. Its mass decreases.
 - C. Its density increases.
 - D. Its density decreases.

2. A car travels 3 miles north, 6 miles south, 2 miles east, 2 miles west, and then 3 miles north. Which of the following is true?
 - A. The displacement of the car is 16 miles, and the distance traveled is 0 miles.
 - B. The displacement of the car is 16 miles, and the distance traveled is 16 miles.
 - C. The displacement of the car is 0 miles, and the distance traveled is 0 miles.
 - D. The displacement of the car is 0 miles, and the distance traveled is 16 miles.

3. Why doesn't a raindrop accelerate as it approaches the ground?
 - A. Gravity pulls it down at a constant rate.
 - B. Air resistance counteracts the gravitational force.
 - C. Its mass decreases, decreasing its speed.
 - D. Objects in motion decelerate over distance.

4. An object moves 100 m in 10 s. What is the velocity of the object over this time?
 - A. 10 m/s
 - B. 90 m/s
 - C. 110 m/s
 - D. 1,000 m/s

5. Which of these objects has the greatest momentum?
- A. A 1,250-kg car moving at 5 m/s
 - B. An 80-kg person running at 4 m/s
 - C. A 10-kg piece of meteorite moving at 600 m/s
 - D. A 0.5-kg rock moving at 40 m/s
6. Sublimation is the change in matter from solid to gas or gas to solid without passing through a liquid phase. Outside of the laboratory, which solid provides the best example of this?
- A. Iron
 - B. Silver
 - C. Salt crystal
 - D. Dry ice
7. A 1.0-kg block on a table is given a push so that it slides along the table. If the block is accelerated at 6 m/s^2 , what was the force applied to the block?
- A. 0 N
 - B. 3 N
 - C. 6 N
 - D. The answer cannot be determined from the information given.
8. A 60-watt lightbulb is powered by a 110-volt power source. What is the current being drawn?
- A. 0.55 amperes
 - B. 1.83 amperes
 - C. 50 amperes
 - D. 6,600 amperes
9. A wave moves through its medium at 20 m/s with a wavelength of 4 m. What is the frequency of the wave?
- A. 5 s^{-1}
 - B. 16 s^{-1}

C. 24 s^{-1}

D. 80 s^{-1}

10. An electromagnet is holding a 1,500-kg car at a height of 25 m above the ground. The magnet then experiences a power outage, and the car falls to the ground. Which of the following is false?
- A. The car had a potential energy of 367.5 kJ.
 - B. 367.5 kJ of potential energy is converted to kinetic energy.
 - C. The car retains potential energy of 367.5 kJ when it hits the ground.
 - D. The car's potential energy converts to kinetic energy and then to sound energy.
11. Why does potential energy increase as particles approach each other?
- A. Attractive forces increase.
 - B. Attractive forces decrease.
 - C. Repulsive forces increase.
 - D. Repulsive forces decrease.
12. A transverse wave does *not* have _____.
- A. a compression
 - B. an amplitude
 - C. a frequency
 - D. a wavelength
13. How do a scalar quantity and a vector quantity differ?
- A. A scalar quantity has both magnitude and direction, and a vector does not.
 - B. A scalar quantity has direction only, and a vector has only magnitude.
 - C. A vector has both magnitude and direction, and a scalar quantity has only magnitude.
 - D. A vector has only direction, and a scalar quantity has only magnitude.

14. Which one has the highest density?
- A. Mist
 - B. Water
 - C. Steam
 - D. Ice
15. Two objects attract each other with a gravitational force of 12 units. If you double the distance between the objects, what is the new force of attraction between the two?
- A. 3 units
 - B. 6 units
 - C. 24 units
 - D. 48 units
16. What is the purpose of a switch in a circuit?
- A. To reverse the direction of alternating current
 - B. To increase the voltage of the batter or cell
 - C. To increase the resistance of wires in the circuit
 - D. To allow the circuit to open and close
17. When a car is driven for a long time, the pressure of air in the tires increases. This is best explained by which of the following gas laws?
- A. Boyle's law
 - B. Charles' law
 - C. Gay-Lussac's law
 - D. Dalton's law
18. A 5-cm candle is placed 20 cm away from a concave mirror with a focal length of 15 cm. About what is the image height of the candle in the mirror?
- A. 30.5 cm
 - B. 15.625 cm
 - C. -15 cm

D. -30.5 cm

19. A plucked guitar string makes 80 vibrations in one second. What is the period?
- A. 0.0125 s
 - B. 0.025 s
 - C. 0.125 s
 - D. 0.25 s
20. A $2,000\text{-kg}$ car travels at 15 m/s . For a $1,500\text{-kg}$ car traveling at 15 m/s to generate the same momentum, which would need to happen?
- A. It would need to accelerate to 20 m/s .
 - B. It would need to add 500 kg in mass.
 - C. Both A and B
 - D. Either A or B
21. Given the four wires described here, which would you expect to have the greatest resistance?
- A. 1 km of American wire gauge 1; diameter 7.35 mm
 - B. 1 km of American wire gauge 2; diameter 6.54 mm
 - C. 1 km of American wire gauge 3; diameter 5.83 mm
 - D. 1 km of American wire gauge 4; diameter 5.19 mm
22. A 5-kg block is suspended from a spring, causing the spring to stretch 10 cm from equilibrium. What is the spring constant for this spring?
- A. 4.9 N/cm
 - B. 9.8 N/cm
 - C. 49 N/cm
 - D. 50 N/cm
23. A $1,000\text{-kg}$ car drives at 10 m/s around a circle with a radius of 50 m . What is the centripetal acceleration of the car?
- A. 2 m/s^2

- B. 4 m/s^2
C. 5 m/s^2
D. 10 m/s^2
24. A 3-volt flashlight uses a bulb with 60-ohm resistance. What current flows through the flashlight?
- A. 0.05 amp
B. 0.5 amp
C. 1.8 amp
D. 18 amp
25. A balloon with a charge of $5 \mu\text{C}$ is placed 25 cm from another balloon with the same charge. What is the magnitude of the resulting repulsive force?
- A. 0.18 N
B. 1.8 N
C. 10^{-3} N
D. $5 \times 10^{-3} \text{ N}$

A2 PRACTICE TEST 1 EXPLANATORY ANSWERS

Reading Comprehension

1. (B) The main idea is the most important theme, one that carries throughout the passage. If someone asked you what the passage was about, you would be most likely to answer “the connection between high fructose corn syrup and obesity,” making B the best answer.
2. (D) Detail A is in paragraph 3, detail B is in paragraph 2, and detail C is in paragraph 2. Detail D is never mentioned.
3. (A) The author is not trying to convince you of anything, as a persuasive essay might do (choice B). The basic purpose here is to provide information on a topic.
4. (B) A summary cannot go beyond the information given in the passage, as summaries A, C, and D seem to do. Only summary B focuses on

what is suggested by the passage.

5. (C) If the blood vessels “lose elasticity and stiffen,” that means that they were not stiff before, eliminating choices A and D as reasonable possibilities. You might also use what you know about the word *elastic* to guess that elasticity is stretchiness, or flexibility.
6. (D) A question that asks you to suggest a title is really asking you to identify the main idea of a passage. Here, the passage provides a brief introduction to the causes of hypertension. It also gives information about the symptoms and complications of the condition and provides insight into some of the ways blood pressure can be lowered, such as through weight loss or medication.
7. (C) A statement of fact can be proved or checked. A statement of opinion is what someone thinks or believes. In this case, statements A, B, and D could be proved scientifically, but statement C is simply a suggestion.
8. (B) If a statement cannot be inferred by the reader, either there is not enough information to draw conclusions about it or the passage contradicts the inference. In this case, it’s the latter—the passage makes clear that there are treatments for hypertension, so choice B cannot be inferred from the text. Statement A could be inferred from information given in paragraph 3, statement C from paragraph 1, and statement D from paragraph 2.
9. (A) Skim the passage to identify the detail that does not appear. The sports in choice A are never mentioned, so you do not even need to look at the other choices.
10. (B) Substitute the choices in place of the vocabulary word. Only *reduced* (choice B) fits the context.
11. (A) Find the summary that best fits the overall substance of the passage. Some choices may be too specific, as B is, or too subjective, as choice D is.
12. (D) This passage is primarily informational, providing facts and data about the topic.
13. (C) Choices A, B, and D relate directly to information given in the passage. Choice C, on the other hand, is never even hinted at by the author, who speaks of sports-related concussions but does not compare them to other types of concussions.

14. (D) What is the passage mostly about? It is about one particular disease, sickle-cell anemia.
15. (C) With what kind of care can you manage the disease? You can manage it with diligent care, or painstaking, attentive care.
16. (C) The passage's tone is the attitude of the author toward the material being discussed. The descriptions of persistent pain and difficulties make the overall tone fairly grim here.
17. (D) Detail A is found in paragraph 2, detail B is found in paragraph 3, and detail C is found in paragraph 1. The author does not speak of other types of anemia that may be caused by vitamin or mineral deficiencies, so choice D is correct.
18. (B) Lead exposure happens over a lifetime (choice A), the shinbone is simply a good way to test for lifetime toxic exposure (choice C), and blood tests don't look at lifetime exposure (choice D). The best choice is B.
19. (C) The word *should* is a clue that this is what someone thinks or believes. The other statements could be checked or proved.
20. (B) Look at the context: "to be exposed to lead." The only word that makes sense in context is choice B, *subjected*.
21. (A) Choice A is the only one that applies to every paragraph in the passage.
22. (A) The author's attitude toward yoga seems to be positive and sincere. *Earnest* (choice A) would be a good description of this tone.
23. (C) This question is all about context. The passage refers to the tolerance of pain, making choices A, B, and D illogical.
24. (D) Although statement D may be true, it is not a detail in the passage. Choices A and B are found in paragraph 3, and choice C is in paragraph 4.
25. (A) Although this passage is partly informative, that is not a choice here. The author does present the opinion that everyone should try yoga, making this a persuasive essay.
26. (C) The effects of super foods on cholesterol, insulin and blood sugar, and blood pressure are noted in paragraphs 1 and 3, but no mention is made of muscle mass.

27. (A) Since yogurt is a super food, not all super foods are vegetables (choice B), and since oats are a super food, they are not all home grown (choice C). The best answer is choice A.
28. (D) Skimming the passage should indicate that cost (choice D) is never mentioned. Each of the other inferences is easy to draw based on the material given.
29. (C) *Delicious* is a matter of opinion—one person may love blueberries or yogurt, while another does not. The other choices are testable facts.
30. (A) Choice B is an opinion that is not expressed by this author, choice C is just a small detail from the passage, and choice D goes beyond the scope of the passage. The best answer is A.
31. (C) The passage describes a single experiment that tends to belie choice D but does not nearly lead to the conclusions in choices A or B. The best choice is C—one study cannot be considered conclusive.
32. (B) Substituting the choices for *touted* in the first sentence should make it clear that choice B is best.
33. (B) Think about the author’s overall attitude toward aromatherapy. The author does not dismiss it entirely, but she does raise questions about its efficacy. The best choice is B—she is uncertain about the topic.
34. (C) Choices A and D are in paragraph 1, and choice B is in paragraph 2. Choice C is never mentioned.
35. (D) The author does not conclude choice A, and the passage does not deal with choice B. Only one paragraph deals with the topic in choice C. The passage is mostly about the pros and cons of barefoot running, making D the best choice.
36. (D) Read the word in context: “There is little consensus when it comes to the safety and effectiveness of barefoot running.” The author means that people do not agree on the safety and effectiveness; there is no unanimous opinion about it.
37. (D) All of the other choices have some support in the passage. Although modern running shoes have only been around for 50 years, there is no indication that people ran barefoot before that time.
38. (A) You can test the cost of running shoes (choice B), the hardness of roads and paths (choice C), and even the springiness of the arch

- (choice D). Whether running barefoot is natural and advantageous remains an opinion (choice A).
39. (C) The passage as a whole has to do with the connection between uninterrupted sleep and muscle development.
40. (B) Even if checking the word in context leaves you with a couple of possible choices, looking at the structural connection between *satisfied* and *satiety* should give you the clue you need.
41. (C) Choices A, B, and D are all mentioned as being affected by HGH levels in the human body. The passage mentions leptin levels in the body being affected by sleep deprivation, but not by HGH.
42. (B) Choice A is incorrect because the passage never compares the importance of uninterrupted sleep to the importance of getting adequate amounts of sleep. Choice C is the opposite of what was stated in the passage. Choice D is incorrect because leptin is never connected to muscle development, only to appetite and obesity.
43. (A) The main idea is the idea that applies to the passage as a whole.
44. (B) Although choice A is close, the word *compel* means “to force,” so a compelling argument is one that forces the listener to a conclusion.
45. (A) There is much information here, too, but the author’s main reason for writing is to encourage the reader to understand the importance of sun exposure. The first and last sentences in the passage help to clarify this purpose.
46. (B) How does the author feel about the topic of sun exposure? The only reasonable answer is choice B, *confident*. Again, the first and last sentences in the passage clarify this tone.
47. (C) Choice C is the only one that sticks to the premise of the passage without focusing too closely on one detail or moving beyond the scope of the essay.

Vocabulary and general knowledge

1. (B) *Mercurial* stems from the god Mercury, but is more closely related to the element, which has qualities of volatility.
2. (D) *Elated* comes from a root that means “to lift up.”
3. (D) To disregard is to “not regard,” or to pay no attention to.
4. (C) To expose yourself to something is to open yourself up to contact.

5. (A) *Deteriorate* is literally “to make or become worse.” A patient whose condition deteriorates may fail to eat or drink (choice D), but that is a side effect of the overall deterioration, not a definition of the word.
6. (C) A precipice is a steep cliff; something that precipitates falls steeply or rushes rapidly, as rain or sleet might do. Something that is precipitous is steep or fast-moving.
7. (A) If you are predisposed to a condition, you are receptive or susceptible to it ahead of time.
8. (B) *Ongoing* denotes action in progress, no matter what the speed of that action might be.
9. (A) A convulsion is one sort of paroxysm, or spasm.
10. (D) A restricted diet comes in many forms. It may be low in fat (choice A) or vegetarian (choice B), but it is always somehow limited (choice D).
11. (D) *Cicatrix* is Latin for “scar,” and it may refer to the scar on either a plant or an animal after a wound has begun to heal.
12. (B) Calcium would not replace (choice A) a diet, but it could be used to add to it.
13. (D) *Quarantine* comes from the word for “forty.” It originally referred to the period of 40 days that a ship was detained in port if it was thought to harbor infectious diseases. Today quarantine is used to separate very contagious patients from the general population.
14. (C) You might give an emetic to a victim of poisoning.
15. (D) A panacea is literally a cure-all—a remedy for all illness.
16. (A) Plug the word into a sentence of your choice, and you will see that the best synonym is *mostly*.
17. (B) Although *selected* may mean many things, in this context, it simply means “particular” or “certain.”
18. (B) *LDL* stands for “low-density lipoprotein.” LDL cholesterol is often referred to as “bad cholesterol” because it collects in blood vessel walls and can put patients at risk.
19. (D) The fibula is the smaller of the two bones between the knee and the ankle; the larger bone is the tibia.

20. (D) To disintegrate is to fall into pieces.
21. (C) The lower jaw of vertebrates or either jaw of certain insects is the mandible.
22. (A) Looking at the root of the word should help you to determine its meaning.
23. (A) If you have qualms about something, you have a feeling of uneasiness. The word can also refer to a brief feeling of sickness or nausea.
24. (D) Something that is intact has no part that is missing or damaged.
25. (C) *Anterior* is the opposite of *posterior*; something that is anterior is near the front.
26. (B) Although *gravid* comes from the same root as *grave* (choice A), it refers to the heaviness of pregnancy, not to seriousness.
27. (B) A wall might be riddled with bullet holes; an essay might be riddled with errors. Either meaning has to do with being affected throughout.
28. (A) You take in food through your alimentary canal.
29. (A) A cough suppressant does not cure a cough (choice B), but it does calm, or subdue it (choice A).
30. (A) A septic wound may indeed be odorous (choice B) or even terminal (choice C), but it is certainly infected (choice A).
31. (B) The patella is the kneecap, a small, movable bone at the front of the knee.
32. (A) *Paltry* comes from a root meaning “rag.” It refers to something that is without value.
33. (C) If you think about the noun version of *vent*, you can probably determine that the verb means “to let out.”
34. (D) Inhalants are inhaled, or breathed in.
35. (C) If the action is inhibited, it is held back, or hindered.
36. (D) The symptom may be disfiguring (choice B) or painful (choice C), but it is definitely made worse (choice D) or intensified.
37. (A) A critique may be positive (choice C) or negative (choices B and D), but it is always some form of assessment or appraisal (choice A).
38. (D) *YOB* stands for “year of birth.”

39. (C) Your progeny are your children, just as your progenitor is your ancestor.
40. (D) Urea, or $\text{CO}(\text{NH}_2)_2$, is found in the urine and other bodily fluids.
41. (C) A quandary is a perplexing or confusing position or situation.
42. (B) Doctors use a diagnostic test to diagnose, or determine the cause of, a condition.
43. (D) *Establish* has several meanings, but only choice D makes sense here.
44. (C) The word *contact* should be a clue here. Contact dermatitis is a skin inflammation brought on by touching something that promotes sensitivity.
45. (D) A UTI is a urinary tract infection.
46. (C) A projection in this context is a prediction, or estimate.
47. (D) When you cauterize a wound, you use a flame, laser, or caustic agent to burn the skin and close the blood vessels.
48. (B) To heed is to pay attention; to be heedless is to fail to pay attention.
49. (C) Look at the roots of the word. To convolve is to roll or twist. Something convoluted is twisted and complicated.
50. (C) To be adequate is to be good enough, or satisfactory.

Grammar

1. (A) This question tests your knowledge of basic punctuation. A comma must appear between the dependent clause *Because she was uncertain of her abilities* and the independent clause *Renee asked for help*. No other commas are needed.
2. (C) The phrase *three days from now* places the action in the future, so the future-tense verb is required.
3. (A) *Iterate* means “to repeat.” The correct word is *itinerant*, meaning “traveling from place to place.”
4. (A) Reading the choices aloud may help you determine which choice has a logical order of phrases and clauses. Choice B is passive rather than active, and the other choices misplace certain modifiers.
5. (A) The past-tense form of the intransitive verb *lie* is *lay*. That kind of verb does not take a direct object. The past tense form of the transitive

verb *lay* is *laid*. Dr. Leo laid the paperwork out on the table.

6. (B) No matter who is working with Nurse Junko, the pronoun required must be a subject pronoun. Only *she* fulfills this requirement.
7. (C) The pronoun must be a plural, third-person, subject pronoun. When in doubt, test the choices in place of the underlined phrase.
8. (B) The correct sentence is “For whom was that e-mail intended?”
9. (C) Pick the word that makes sense given the sentence as a whole. The meteorologist’s prediction was not made because of Sheila’s clever thinking (choice A), and her bringing of an umbrella was a reasonable consequence of the forecast, not a contrast to it (choice B). The best choice is C.
10. (C) *Harvey* is a noun of direct address and should be followed by a comma.
11. (C) The correct spelling has two *rs* and two *ss*.
12. (B) Substituting each choice in place of the blank should prove to you that the only answer that sounds correct is the infinitive phrase.
13. (C) *Datum* is singular; the intake nurse collects data.
14. (B) *Having rested* would be another possibility, but *resting* (choice B) is correct.
15. (A) Although choice B is possible if the lunch were made quickly rather than consumed quickly, choice A is far more logical and grammatically correct.
16. (A) The word *staff* may be singular or plural. Here, the pronoun *their* indicates that it is being used as a plural noun, which means that the verb that agrees is *hope* (choice A), not *hopes* (choice B).
17. (C) The pronoun should be singular, third-person, and possessive.
18. (B) A proscription is a ban or prohibition; a prescription is something a physician would write for a pharmacist to fill.
19. (B) The sentence is missing its end punctuation. Since it is a question, it needs a question mark.
20. (A) A related word is *disciple*.
21. (D) Only the introductory clause requires a comma to separate it from the independent clause it precedes.

22. (A) If you have two choices, you select between them (choice B). If you have three or more, you select among them (choice A).
23. (B) Stationery is paper for letter-writing. *Stationary* means “motionless.”
24. (A) The pronoun must be reflexive and refer back to the pronoun already in the sentence—the pronoun *one*. The correct form of that reflexive pronoun is shown in choice A.
25. (B) Choices A and D make it seem as though the mother were age seven, and choice C is nonsensical. Only choice B eliminates the problem of misplaced modifiers.
26. (D) The school is not long overdue; the book is.
27. (D) The correct verb completes the infinitive phrase.
28. (C) The correct sentence would be “He had never had to be on his own in the past.”
29. (B) *Too* means “overly” here. *Much uncomfortable* (choice C) is ungrammatical.
30. (D) Placing a semicolon between the clause *Follow my lead* and the rest of the sentence would make this sentence correct.
31. (B) In this type of question, you must make sure that the tense of verbs remains consistent. Because *was* is past tense, the correct answer contains another past-tense verb, *raised*.
32. (C) The construction of the sentence calls for an adverb, *initially*, not an adjective, *initial*.
33. (B) The pronouns should be object pronouns because they receive the action of the verb. Only choice B places the first-person pronoun last, which is correct in standard English.
34. (B) The correct pronoun is plural and first-person because it encompasses the first-person pronoun *I*.
35. (A) There are two pronouns in the sentence. The first should be an object pronoun, which is true in choices A, C, and D. The second should be a possessive pronoun that describes a noun, which is true in choice A. The possessive pronoun *mine* is only used after a verb, as in “The application is mine.”
36. (B) A comma should follow *rounds* to separate the introductory dependent clause from the rest of the sentence.

37. (A) *Judgment* and *judgmental* drop the *e* in *judge* before adding the suffix.
38. (C) The verb *study* does not agree with the singular noun *Sidney*. The word should be *studies*.
39. (A) Try reading the sentence aloud with each choice replacing the blank. Only choice A makes sense.
40. (D) There are several frequently confused words in this sentence, but only *advise* (choice D) is incorrect. The correct word would be *advice*, meaning “recommendation” or “guidance.”
41. (C) To be clear and correct, the phrase *having finished the meal* must lie as close as possible to the name it modifies, *Mr. Innes*.
42. (A) The team is traveling as a unit, making the singular form of the verb correct here.
43. (B) A comma should separate the adjectives *small* and *handmade*.
44. (D) *Nevertheless* is one word.
45. (D) The pronoun that replaces this plural noun should be plural, third-person, and possessive.
46. (B) You would calculate *speedily* (an adverb), not *speedy* (an adjective).
47. (C) Choice A misplaces the modifier, making it seem as though I were resting in a cage. Choice B is passive. Choice D is just confusing. The best choice is C.
48. (D) In questions like this one, try to find the phrase that, if moved around, would improve the sentence. In this case, *Standing with the refrigerator door open* should really begin the sentence. If it did, all phrases would appear properly next to the nouns that they modify.
49. (A) You consult *with* people, not from, by, or in them.
50. (B) Read the choices aloud if you are in doubt. The only one that contains phrases in logical order is choice B.

Basic Math Skills

1. (C) To multiply mixed numbers and fractions, first express mixed numbers as fractions. In this case, $\frac{1}{4}$ may be expressed as $\frac{13}{4}$. Next,

multiply numerators and denominators. $13 \times 1 = 13$. $4 \times 16 = 64$. The answer is $13/64$.

2. (C) Think: $0.20x = 15$. Solve: $x = 15 \div 0.20$. The answer is 75.
3. (C) Set this up as a proportion: $270/3 = x/4.5$. You may cross-multiply to solve: $270 \times 4.5 = 3x$. $1,215 = 3x$. $x = 1,215/3$, or 405.
4. (B) First, determine how much Josie spent: $\$1.35 \times 3 = \4.05 . Then subtract that total from $\$5.00$: $\$5.00 - \$4.05 = \$0.95$.
5. (C) 20% is the same as $20/100$. Reduce that to lowest terms by dividing numerator and denominator by 20: $1/5$.
6. (D) If 1 kilogram equals 2.2 pounds, 8 kilograms equal 2.2×8 , or 17.6 pounds.
7. (D) Reading from left to right, M = 1,000, D = 500, X = 10, and VI = 6, making the date 1516.
8. (B) Multiplying two numbers with two digits to the right of the decimal point should result in a product with four digits to the right of the decimal point.
9. (B) Without doing the calculation, you should know that multiplying two numbers with two digits to the right of the decimal point results in a product with four digits to the right of the decimal point.
10. (20) Find the total number of sheep in the flock: $15 + 4 + 1 = 20$. Of those 20, 4 are brown. $4/20 = x/100$; $x = 20$.
11. (A) The Roman system does not use place value in that the numeral C, for example, can only mean one thing, 100. In modern number systems, a numeral such as 5 may mean something different depending where it falls in the number; for example, in 500 it does not mean the same thing that it means in 0.05.
12. (36) The least common denominator is the smallest number into which both denominators can divide. Use the larger of the two denominators and a guess-and-check system: Multiplying 12 by 2 equals 24, but the other denominator, 9, does not divide into 24. Multiplying 12 by 3 equals 36, and 9 does divide into 36. Therefore, 36 is the least common denominator.
13. (D) The time represented by 0340 (choice A) is 3:40 a.m. Times from 1200 through 2359 are afternoon, or p.m., times.

14. (C) Think of the ratio this way: 3 is to 5 as 81 is to x . You may solve this by setting up an equation and cross-multiplying. $\frac{3}{5} = \frac{81}{x}$.
 $5 \times 81 = 3x$. $405 = 3x$. $x = 135$.
15. (C) Begin by expressing the mixed numbers as improper fractions:
 $4\frac{1}{8} = \frac{33}{8}$, and $1\frac{1}{2} = \frac{3}{2}$. To divide by a fraction, multiply by its reciprocal. Therefore, $\frac{33}{8} \div \frac{3}{2} = \frac{33}{8} \times \frac{2}{3}$, or $\frac{66}{24}$. Now reduce to lowest terms: $\frac{66}{24} \div \frac{6}{6} = \frac{11}{4}$. Finally, express $\frac{11}{4}$ as a mixed number: $2\frac{3}{4}$.
16. (B) Add up everything Mr. Sanders spends and subtract that from the original \$100. He spends $\$8.45 + \$2.25 + \$20$, for a total of \$30.70. $\$100 - \$30.70 = \$69.30$.
17. (345) First figure out how many hours she worked all week.
 $7 + 6.5 + 6.5 + 6.5 + 6.5 = 33$ hours in all. Now multiply that by \$10.45 per hour: $\$10.45 \times 33 = \344.85 . Since you must round to the nearest whole number, the answer is \$345.
18. (A) Solve by multiplying the cost of the house by 8%: $\$152,000 \times 0.08 = \$12,160$.
19. (250) One centimeter = 10 millimeters, so 25 centimeters = 250 millimeters.
20. (C) You can find the answer by setting up a proportion: $\frac{1}{40} = \frac{4.5}{x}$. Cross-multiplication leads to $x = 4.5(40)$, or $x = 180$ inches. Converting that to feet gets you an answer of $\frac{180}{12}$, or 15 feet.
21. (D) You should not need to compute if you estimate first. Your answer will be greater than 234 by around $23 + 2$. The only possible answer is D.
22. (20) Think of this as an equation: $20\% = \frac{20}{100}$. $(\frac{20}{100})x = 4$. If you reduce this in your head to $(\frac{1}{5})x = 4$, you should be able to ascertain the answer without computing. 20% is the same as $\frac{1}{5}$, so you are looking for a number that is 5 times 4.
23. (A) To add mixed numbers, first express them as improper fractions. In this case, $4\frac{2}{3}$ may be expressed as $\frac{14}{3}$, and $6\frac{1}{2}$ may be expressed as $\frac{13}{2}$. Next, find the common denominator, 6. $\frac{14}{3} = \frac{28}{6}$, and $\frac{13}{2} = \frac{39}{6}$. Add the numerators: $28 + 39 = 67$. $\frac{67}{6} = 11\frac{1}{6}$.
24. (A) Find the total amount she spent by multiplying number of stamps by cost: $20 \times \$0.29 = \5.80 , and
 $40 \times \$0.42 = \16.80 . $\$16.80 + \$5.80 = \$22.60$. $\$25.00 - \$22.60 = \$2.40$.

25. (A) 7:05 p.m. Choice B would be 1905 in military time.
26. (C) You can find the average by dividing her total by the number of months she has been collecting. $144 \div 8 = 18$.
27. (A) You can convert 70% to a decimal (0.7) if that makes this easier to solve. $110 \times 0.7 = 77$
28. (D) The calculation would look like this:

$$\begin{array}{r} 165 \text{ r}2 \\ 31 \overline{) 5117} \\ \underline{31} \\ 201 \\ \underline{186} \\ 157 \\ \underline{155} \\ 2 \end{array}$$

29. (D) The ratio is 3:5 beans to beef. Gus is using x beans:8 beef. Make an equation and cross-multiply to find the answer: $\frac{3}{5} = \frac{x}{8}$. $3 \times 8 = 5 \times x$.
 $x = 24 \div 5 = 4.8$
30. (D) Think: $1.75x = 98$. $98 \div 1.75 = x$, so $x = 56$.
31. (C) Decimals must have denominators of 10, 100, and so on. You can make $\frac{7}{4}$ into a fraction with a numerator of 100 by multiplying both numerator and denominator by 25: $\frac{7}{4} \times \frac{25}{25} = \frac{175}{100}$. $\frac{175}{100} = 1.75$.
32. (D) Because 1 meter = around 3.28 feet, 6 meters = 3.28×6 feet, or 19.68 feet.
33. (A) A percentage is equivalent to a fraction with a denominator of 100. Think $\frac{25}{80} = \frac{x}{100}$. Cross-multiply to get the answer: $2,500 = 80x$, so $x = 31.25$.
34. (D) If 10 pencils are divided between 2 students, each student gets 5 pencils. For 20 students, you need 20×5 , or 100 pencils.
35. (1,204) M = 1,000, CC = 200, and IV = 4.
36. (B) You can think of this algebraically: The certain number,
 $x = (18 \times 4) - 7$. Therefore, $x = 65$.
37. (B) Ordinarily, multiplying two numbers with two digits right of the decimal point would result in a product with four digits to the right of the decimal point. Here, however, the last digit, zero, is dropped off.

38. (B) Since each number has one digit after the decimal point, the product should have two digits following the decimal point.
39. (C) The formula is $(F - 32) \times \frac{5}{9} = C$. So $(82 - 32) \times \frac{5}{9} = 27.777$, or around 28.
40. (B) The units don't matter here; the scale is 2:1. If 2 cm = 1 m, 8 cm = 4 m, and 10 cm = 5 m.
41. (C) Look for a pattern. He can bake 3 dozen in 30 minutes, so he can bake twice that in twice the time, three times that in three times the time, and four times that (12 dozen) in four times the time—120 minutes, or 2 hours.
42. (B) Estimating may not get you close enough to the answer.
43. (C) First find the least common denominator. Then subtract the numerators. $\frac{25}{45} - \frac{18}{45} = \frac{7}{45}$.
44. (C) Think of this as a proportion: 3 bars/\$2.58 = 5 bars/ x . Cross-multiply to solve: $5(\$2.58) = 3x$, so $\$12.90 = 3x$, so $\$4.30 = x$. You may also solve this by figuring out the unit cost: $\$2.58/3 = \$.86$ per bar, so 5 bars would cost $\$.86 \times 5 = \4.30 .
45. (D) To subtract mixed numbers, first express them as improper fractions. In this case, $4\frac{1}{5}$ may be expressed as $\frac{21}{5}$, and $2\frac{2}{3}$ may be expressed as $\frac{8}{3}$. Next, find the common denominator—15. $\frac{21}{5} = \frac{63}{15}$, and $\frac{8}{3} = \frac{40}{15}$. Subtract the numerators: $63 - 40 = 23$. $\frac{23}{15} = 1\frac{8}{15}$.
46. (C) Decimals are expressed as tenths, hundredths, and so on. Think: $\frac{2}{5} = \frac{x}{10}$. The answer is 4, so the decimal is 0.4.
47. (72) 25% is the same as $\frac{1}{4}$, which may be an easier way to think about this. $18 \times 4 = 72$.
48. (D) If she gets 2% quarterly, she gets 2% calculated four times a year. The first quarter, she ends up with \$102. The second quarter, she makes 2% on \$102, for a total of \$104.04. The third quarter, she makes 2% on \$104.04, for a total of \$106.12. The fourth quarter, she makes 2% on \$106.12, for a total of \$108.24.
49. (11,200) First find the number of calories daily: $2,000 - (0.2 \times 2,000) = 1,600$. Now multiply that by the number of days in a week: $1,600 \times 7 = 11,200$.

50. (A) There are 3 teaspoons in a tablespoon, so there are 9 teaspoons in 3 tablespoons.

Biology

1. (D) These beadlike organelles are located in the cytoplasm of nearly all cells, on the rough endoplasmic reticulum. They assemble the proteins that the cell uses to grow, repair itself, and control processes.
2. (C) The products of fermentation are ethanol and carbon dioxide. It is the latter that causes the dough to rise.
3. (B) Mitosis creates cells that are exact copies of each other, down to the number of chromosomes in the cell. Meiosis, which creates sex cells, forms cells with half the number of chromosomes in the original cell.
4. (D) DNA can mutate and change. The other choices are true statements.
5. (C) The gene for the disease is recessive, so only homozygous recessive offspring (*aa*) manifest the disease. An offspring that carries the recessive gene along with the dominant *A* gene (*Aa*) will carry but not manifest the disease. In a Punnett square, this would mean two out of four offspring.
6. (A) This describes a hypotonic situation—there are fewer dissolved particles outside the cell than inside. This may enable water to flow into the cell from the solution, swelling the cell, which may burst.
7. (C) Xylem conducts water (choice A); phloem is the system of narrow tubes that transports sugars and other nutrients.
8. (B) The shape of an enzyme controls its fit with its substrate. Changes in temperature and/or pH can alter an enzyme's shape.
9. (A) The stamen (choice A) is the male reproductive organ in a flowering plant. The pistil (choice B) is the female reproductive organ. The stigma (choice C) is the top part of the pistil, and the style (choice D) is a slender stalk below the stigma.
10. (B) A parasitic relationship is one in which one organism benefits (in this case, the bacterium) to the detriment of another (in this case, the human).
11. (D) The Latin names by which we know certain animals are typically their genus and species names. In order, a house cat is from the

kingdom Animalia, phylum Chordata, class Mammalia, order Carnivora, family Felidae, genus *Felis*, and species *catus*.

12. (A) Waxes, oils, and fats are lipids.
13. (D) The lysosome contains digestive enzymes. The job of a lysosome is to digest food for cells and break down cells' waste products.
14. (D) In the asexual process known as binary fission, one parent cell divides into two offspring cells with DNA identical to the parent cell's. Many bacteria, some algae, and some protozoa reproduce this way.
15. (B) During this active phase of a cell's reproductive life, the cell produces nucleic acids and proteins and doubles its number of chromosomes.
16. (C) In the twisted strand of DNA, the base adenine always pairs with thymine, and cytosine pairs with guanine. Uracil is found in RNA.
17. (B) Picture a Punnett square. Reading the chart clockwise from top left, the cross would yield one female carrier, one female hemophiliac, one male hemophiliac, and one normal male who neither carries nor manifests the disease. Only one of the four, a female X_hX , would be a carrier only.
18. (C) The formula represents carbon dioxide pairing with water to form a simple sugar and oxygen. This is what happens in the process of photosynthesis.
19. (B) The students' measurements were precise, in that they corresponded closely with each other. However, since the true measurement differed from theirs by at least 0.13 g, the measurements were not terribly accurate.
20. (C) The greatest energy content is at the base of the energy pyramid, where the producers of energy congregate; therefore, producers > primary consumers > secondary consumers > decomposers.
21. (B) Only this choice presents you with the control group and test group needed for a valid experiment.
22. (C) Nitrification (choice C) is a step in the nitrogen cycle. Condensation (choice A) is the change from gas to liquid that water vapor undergoes as it cools. Transpiration (choice B) is the loss of water through a plant's stomata. Absorption (choice D) is the intake of water from the water table by plant roots.

23. (C) Chlorophyll absorbs red and blue light but reflects green light.
24. (B) Bacteria and blue-green algae are prokaryotes, organisms whose cells have no true nucleus. They are not gymnosperms (vascular plants whose seeds have no protective covering). Of the choices, only blue-green algae are autotrophs (organisms that make their own food through photosynthesis), and only certain bacteria may be pathogens (infectious organisms that spread disease).
25. (D) Simple carbohydrates are simple sugars. Complex carbohydrates are simple sugars linked with covalent bonds.

Chemistry

1. (B) Isotopes of an element differ in the number of neutrons they have in an atom. Their mass number is also different, as is the number of particles in their nucleus.
2. (C) The pH scale is a logarithmic scale. Therefore each number on the pH represents a tenfold increase or decrease in acidity. In this example, a difference in pH of 2 equals a 10 times 10, or 100 times increase in acidity.
3. (B) Radioactive isotopes have an extremely short half-life and would degrade too quickly to be useful. Too long a half-life would mean that the isotope would remain in the body for too long a period of time.
4. (C) There are polar covalent bonds in water and ionic bonds in a salt.
5. (D) This is an example of the double replacement reaction that occurs when aluminum nitrate and sulfuric acid react together.
6. (B) Metals make up about two-thirds of the periodic table and are mostly located on the left and center areas of the table. Nonmetals are located on the upper right side of the periodic table. Semimetals form a staircase that runs between metals and nonmetals on the periodic table.
7. (A) Set up a simple equation if it helps. Suppose that gas A has a molar mass of M_1 , and gas B has a molar mass four times that, M_2 . Now suppose that $M_1 = 1$ and $M_2 = 4$. The square root of $\frac{4}{1} = \frac{2}{1}$, so the rate of effusion for gas A is half that of gas B.
8. (C) Allotropes are different forms of the same element. Diamonds, graphite, and buckminsterfullerene are all allotropes of carbon.

Fluorine is an atomic element of its own and is not an allotrope of carbon.

9. (D) Temperature, surface area, and pressure all affect the rate of a reaction. Time is simply used to measure the rate of reaction and is not a factor that would affect the rate.
10. (A) An amino acid has an amine and a carboxylic acid group present. These are represented by R-NH₂ and R-COOH.
11. (B) Examination of the first substance shows that methane gas has one carbon atom. There is also one carbon atom on the right side of the equation, so there is no need to balance this. There are four hydrogen atoms on the left side. To balance this, change the coefficient on the right side so that there are four hydrogen atoms there as well:

Now there are two atoms of oxygen on the left and four on the right (two from carbon dioxide and two from water). To balance, change the coefficient on the left to 2:

12. (D) Reactivity is the tendency of an element to undergo chemical change, which in turn depends on its stability. Xenon, a noble gas, is extremely stable and thus nonreactive under normal conditions.
13. (D) Ionic compounds have high melting points, good connectivity, and a crystalline shape. An example is table salt, NaCl.
14. (C) Calculate the number of protons by subtracting the atomic number from the mass number. Uranium-235 is so named because its mass number is 235, and the atomic number for uranium is 92, so $235 - 92 = 143$.
15. (A) The electron distribution of an atom is divided into shells, which in turn contain subshells composed of the orbitals in which the electrons reside. In electron configuration, the symbols 1s, 2s, 2p, and so on are used to designate subshells, with superscripts indicating the number of electrons in each subshell. There is a maximum number of electrons per subshell. Lithium has atomic number 3, meaning that it has 3

protons, and in its balanced state, 3 electrons. Looking at the superscripts alone should tell you that only choice A offers a solution with 3 electrons—2 in the first subshell and 1 in the second.

16. (A) To perform this operation, you must know the number of moles of solute and the number of liters of solution, because molarity equals moles/liter. 100 grams of solution = 0.1 liters of solution. 5 grams of solute where the molar mass of the solute is 180.0 g/mol means a molarity of $\frac{5}{180}$, or $0.027777 \dots \frac{0.028}{0.1} = 0.28$, so the molarity of the solution is 0.28 M.
17. (D) As a general rule of thumb, for acid solutions $[H^+] > [OH^-]$, for basic solutions $[H^+] < [OH^-]$, and for neutral solutions or for pure water $[H^+] = [OH^-]$.
18. (B) The standard for a mole is based on a single isotope of carbon. It is the amount of a substance that contains the same number of chemical units as the number of atoms in exactly 12 g of that isotope of carbon. That number, known as Avogadro's number, has a value of 6.022×10^{23} . A mole of atoms consists of Avogadro's number of atoms and has a mass in grams numerically equal to the atomic weight of the element. So, one mole of H_2O has a mass in grams equal to the atomic weight of two atoms of hydrogen plus one atom of oxygen—about $1 + 1 + 16$, or 18 g.
19. (C) Certain unstable atoms emit particles/rays and thus change into atoms with a different chemical identity, a process known as radioactivity. Alpha particles consist of particles that carry a +2 charge.
20. (D) Chemical compounds are named in the order of the elements shown. Ag is silver, and NO_3 is nitrate. Nitrates have three oxygen atoms; nitrites (choice C) have two.
21. (B) Oxidation numbers for atoms in a neutral molecule must add up to 0. Hydrogen has an oxidation number of +1 when combined with nonmetals and -1 when combined with metals. In this case, it is combined with a nonmetal, so to obtain a sum of 0, the chlorine atom must have an oxidation number of -1.
22. (D) Generally, the rule is

London dispersion < dipole-dipole < H-bonding < ion-ion

A Keesom interaction is one form of dipole-dipole interaction.

23. (D) If x = number of moles, then $x \div 2.0 \text{ L} =$ a concentration of 1.5 M, so $x = 3.0$ moles.
24. (B) Ag^+ is silver, and OH^- is hydroxide, forming a molecule of AgOH .
25. (C) The atomic number of an element equals the number of protons in its nucleus. Of the numbers given, only 11, Na (sodium), is an alkali metal.

Anatomy and Physiology

1. (B) An anterior muscle is located near the front of the body. Of those listed, the quadriceps (frontal thigh muscle) is the most anterior.
2. (B) The headrest prevents the head from moving too far backward, or hyperextending the neck beyond its normal range.
3. (D) Because of the hyperflexion and hyperextension caused by such a collision, it is not uncommon to find tears or stretching of the ligaments of the spine. The injury is front-to-back, making choice B unlikely, and a herniated disc (choice C) is more of a compression injury.
4. (C) Defecation (choice A) is the elimination of waste. Osmosis (choice B) is the movement of molecules across a membrane. Circulation (choice D) is the movement of blood through the body. Peristalsis (choice C) is the involuntary, wavelike movement of muscles in the intestine and elsewhere that pushes food along.
5. (A) Some nutrients supply energy, and others support metabolism. Nutrients in the first set include carbohydrates, proteins, and fats. Those in the second set include vitamins, minerals, and water.
6. (B) Schwann cells wrap around the nerve fibers and form the myelin sheath in the peripheral nervous system.
7. (B) The nervous system is made up of the brain, spinal cord, and nerves. It receives and transmits signals from the environment that regulate voluntary and involuntary movement.
8. (A) The sympathetic and parasympathetic systems (choices C and D) are part of the autonomic nervous system (choice B), which controls involuntary actions of the smooth muscles, glands, and heart. The

somatic nervous system (choice A) has to do with reception of external stimuli and voluntary control of the muscles.

9. (C) Damage to a disc in the lower back will most likely cause pain radiating downward along the sciatic nerve.
10. (B) The ulna (choice A), radius (choice C), and humerus (choice D) are arm bones.
11. (D) The ovaries are the egg-producing reproductive organs.
12. (C) A low pH in the stomach (choice A), cilia in the trachea (choice B), and mucus (D) are primary defenses. Cells recognizing a pathogen (choice C) are a third line of defense.
13. (B) Hormones from the endocrine system, particularly from the pituitary gland, regulate growth.
14. (D) The mitral valve opens to allow oxygenated blood collected in the left atrium to flow into the left ventricle.
15. (D) The disease known as rickets is a product of vitamin D deficiency and results in the softening and bending of bones.
16. (B) One of the jobs of the lymphatic system is to prevent excess fluid from accumulating in tissues by collecting it and moving it into the circulatory system via the brachiocephalic veins.
17. (D) The parathyroid hormone regulates calcium in the body through several means, one of which is increasing the production of activated vitamin D.
18. (C) The most medial feature is the one closest to the middle of the body.
19. (B) The average person in good health has a pulse of about 72 beats per minute and a blood pressure of 120 over 80 mm Hg.
20. (A) A sagittal section occurs along a longitudinal plane, dividing the body into right and left regions.
21. (A) Pepsin aids chemical digestion in the stomach by breaking down proteins.
22. (B) The esophagus is the passage that connects the pharynx to the stomach.
23. (B) Iodine is the key mineral in thyroid hormone production. Iodine deficiency can cause a goiter, swelling of the thyroid gland.

24. (D) The cheekbones are to the right and left of the nose, meaning that they are lateral to it, or away from the body's midline.
25. (C) Antibodies are formed when an antigen stimulates B cells, special lymphocytes, to produce specialized proteins that combat foreign substances or organisms.

Physics

1. (C) Since density = mass/volume, it should be obvious that the decrease in volume as a car is crushed should lead to an increase in density. Nothing happens to change the mass of the car.
2. (D) If a car travels 3 miles north, 6 miles south, 2 miles east, 2 miles west, and then 3 miles north, it has traveled a total distance of 16 miles. However, because of the directions it has traveled, it has ended up in the place where it started, giving it a displacement of 0.
3. (B) Gravity in fact causes acceleration, making choice A incorrect—unless air resistance counteracts that acceleration, which it may easily do for an object as small and lightweight as a raindrop. Raindrops may lose mass (choice C), but that would not decrease their acceleration. Choice D violates Newton's first law.
4. (A) Velocity is the change in distance over time. 100 m/10 s is the same as 10 m/s.
5. (A) Momentum is calculated by multiplying mass by velocity, $p = mv$. Although the meteorite seems intimidating, it is the car that has the greatest momentum, at 6,250 kg.m/s.
6. (D) Dry ice is frozen carbon dioxide. As it breaks down, it transforms directly into gas without passing through a liquid phase. Sublimation of metals is possible, but not "outside of the laboratory."
7. (C) Applying Newton's second law, $F = ma$, a 1.0-kg block accelerated at 6 m/s² requires a 6-N force to move it.
8. (A) The equation $P = IV$, power equals current times voltage, is the one to use. Dividing the power by the voltage gives you $I = P/V$, and 60 watts/110 volts equals approximately 0.55 amperes.
9. (A) According to the equation $v = f\lambda$, frequency is equal to the velocity of the wave divided by the wavelength. Dividing 20 m/s by 4 m gives you 5 s⁻¹.

10. (C) When the car is attached to the electromagnet, its potential energy (PE) is 367.5 kJ because $PE = mgh$, or $(1,500 \text{ kg})(9.8 \text{ m/s}^2)(25 \text{ m})$. As the car falls, all 367.5 kJ of PE are converted to kinetic energy. On hitting the ground and making a sound, the car will no longer possess any PE.
11. (C) Unlike charges attract each other; like charges repel each other. As two like charges near each other, work is required to push them together, and potential energy increases.
12. (A) Transverse waves do not have areas of compression and expansion as they move perpendicular to the direction of the wave.
13. (C) A vector quantity, for example, 25 k/h N, has both magnitude and direction. A scalar quantity has only magnitude.
14. (B) Ice (choice D) floats on water (choice B) because its density is less, despite the fact that it is a solid. When water freezes, its volume increases, making its density (mass/volume) less.
15. (A) Increasing distance by a factor of 2 decreases the force by a factor of 2^2 , or 4. The new force of attraction is the original force divided by 4, or 3 units.
16. (D) The switch interrupts the electrical circuit or allows the current to flow from one conductor to another.
17. (C) Gay-Lussac's law states that temperature and pressure are directly proportional. Heat from friction caused as tires rub on the road increases the temperature of the air in the tire, causing an increase in pressure. This is why you are advised to measure the pressure in your tires when they are cold—before starting a trip.
18. (C) You are looking first at the relationship between the object distance (d_o), the image distance (d_i), and the focal length (f). Start out with $1/f = 1/d_o + 1/d_i$ where $f = 15 \text{ cm}$ and $d_o = 20 \text{ cm}$. In this case, $1/15 = 1/20 + 1/d_i$. Use equivalent fractions to solve:

$$4/60 = 3/60 + 1/60, \text{ so } d_i = 60 \text{ cm}$$

Now you can use what you know to calculate the image height (h_i), using $h_i/h_o = -d_i/d_o$ where $h_o = 5 \text{ cm}$, $d_o = 20 \text{ cm}$, and $d_i = 60 \text{ cm}$. So

$h_i/5 = -60/20$, meaning that the image height is -15 cm. The negative value indicates an inverted image.

19. (A) The period is the reciprocal of the frequency. Here, the frequency is 80 vibrations per second. The period is $1/80$, or 0.0125 s.
20. (D) Momentum is the product of velocity and mass. The first car's momentum is $2,000 \times 15 = 30,000$ kg·m/s. The second car's momentum is $1,500 \times 15 = 22,500$ kg·m/s. For its momentum to equal that of the first car, it could either accelerate to 20 kg/s or add 500 kg to its mass.
21. (D) Resistance of a wire depends on length, material, and cross-sectional area. Given four wires of the same length and material, the thinnest wire would have the highest resistance.
22. (A) The equation to use is $K = f/x$, where K is the spring constant, f is force, and x is distance. First, find the force in Newtons. Since the gravitational constant on Earth is 9.8 , multiply the mass, 5 , by that constant to find the force: $9.8 \times 5 = 49$ N. Now calculate the spring constant: $K = 49$ N/ 10 cm. $K = 4.9$ N/cm.
23. (A) Determine the acceleration by dividing the speed squared by the radius of the track: $a = v^2/R$. In this case, $a = 100/50$, or 2 m/s².
24. (A) According to Ohm's law, current (I) equals voltage (ΔV) divided by resistance (R), or $I = \Delta V/R$. In this case, you know voltage and resistance, so $I = 3/60$, or 0.05 amp.
25. (B) Use Coulomb's law to find the force. The equation to use is this:

$$\frac{F_{\text{elect}} = k \times Q_1 \times Q_2}{d^2}$$

Remember that 1 coulomb = 10^6 microcoulombs. Both balloons in this problem have the same charge, so Q_1 and Q_2 in this case equal 5×10^{-6} C, and d , distance, = 25 cm, or 0.25 m. Now, you must recall Coulomb's constant, $k = (9.0 \times 10^9 \text{ N}\cdot\text{m}^2/\text{C}^2)$. From this point, it's all about computation:

$$\frac{\frac{9.0 \times 10^9 \text{ N}\cdot\cancel{\text{m}^2}}{\cancel{\text{C}^2}} \times (5 \times 10^{-6} \cancel{\text{C}}) \times (5 \times 10^{-6} \cancel{\text{C}})}{(0.25 \text{ m})^2} = \frac{225 \times 10^{-3}}{0.0625} = 3.6 \text{ N}$$

Microbes and Health

There are 10 times more microbes than human cells in the human body. Scientists have long known that the human body is host to a staggering number of microorganisms, but recent information is shedding light on just how pivotal a role these bacteria play in the development of the human immune system.

The human body plays host to a wide array of microorganisms that are specially adapted to survive in particular portions of the human body. There is such a great amount of variation in these microorganisms that few people will share the same strains of bacteria in the same quantities. This process begins at birth: a newborn infant emerges from the womb, a germ-free environment, and is immediately coated with germs from its mother's birth canal. These germs immediately begin to breed and colonize the human body that will now be its new host.

The most intriguing discovery is not that the body's immune system tolerates these millions of harmless organisms, but that it may rely upon their presence to function properly. Scientists recently found that with laboratory mice that could not produce a particular inflammation-reducing molecule, upon being injected with a particular strain of bacteria that was then allowed to breed, their immune system quickly developed the ability to synthesize that molecule. Simply put, the mice needed the bacteria for their immune systems to function properly.

This same basic concept is also being used with humans. A relatively experimental process known as fecal bacteriotherapy is now being used to reintroduce healthy bacteria into a colon that lacks the capability to defend itself against pathogenic agents. Scientists are just beginning to understand the important role that these microorganisms play in the body of a healthy human being, but early tests have yielded remarkable discoveries.

1. What is the main idea of the passage?

- A. Recent discoveries are revealing just how critical microorganisms are to maintaining a properly functioning immune system.
- B. The human body is host to a wide array of microorganisms.
- C. Bacteriotherapy is being used to reintroduce healthy bacteria into a colon that lacks the capability to defend itself against pathogenic agents.
- D. Early tests have shown remarkable potential for the possibilities of bacteriotherapy.

2. Which of the following is *not* listed as a detail in the passage?

- A. Babies are born coated with germs from the birth canal.
- B. Mice and humans respond to microbes similarly.
- C. Few people share the same microbes in the same quantities.
- D. Human bodies contain far more microbes than they do cells.

3. What is the author's primary purpose in writing this essay?

- A. To persuade
- B. To inform
- C. To entertain
- D. To analyze

4. Choose the best summary of the passage.

- A. Scientists have used experiments on mice to prove the body's need for certain microorganisms. Instead of damaging the immune system, it turns out that bacteria of certain types may in fact support immunity, at least in lower organisms.

- B. Bacteriotherapy was originally tried on mice, and the results were positive enough that it now is being used in human trials as well. The essential theory states that introducing bacteria into a damaged colon can help with reconstruction and immune response.
- C. Although scientists have known for years that the body tolerates certain microorganisms, experiments now show that some bacteria may be required for a healthily functioning immune system. For example, introducing harmless bacteria seems to help the colon defend itself against pathogens.
- D. Humans are born germ-free, but it does not take long for pathogens to find their way into the body, often destroying an otherwise healthy immune system. Replacing these harmful bacteria with harmless ones is a new and exciting process known as bacteriotherapy.

MRSA

Methicillin-resistant *Staphylococcus aureus* (MRSA) is a form of the *Staphylococcus aureus* bacterium that is resistant to antibiotics and as a result is very difficult to treat. MRSA now kills more Americans every year than HIV/AIDS, and the rates of infection are rising.

Methicillin is an antibiotic that was introduced in the 1960s as a way of combating the *Staphylococcus aureus* bacterium that is ubiquitous in hospitals. Within a year, doctors began finding strains of bacteria that had already developed immunity to methicillin. By the 1990s, MRSA had become the leading hospital-acquired skin infection in the United States. At the same time MRSA started appearing outside of hospitals. These were different strains of the bacteria, but just as dangerous, and spreading just as quickly. In the past 15 years, MRSA bacteria have become ubiquitous not only in hospitals, but in gyms, locker rooms, swimming pools, and any other settings where human contact is common.

Researchers in Ireland are developing a technology that may significantly halt the spread of the hospital-associated MRSA bacteria. They have developed a textile consisting of nanomaterials 1,000 times smaller than a human hair; these textiles are shown to halt the spread of infection and can be used for linens, drapes, and upholstery in hospitals.

The potential for this technology to reduce the instances of hospital-associated MRSA is staggering.

You can reduce your risk for community-associated MRSA infection by regularly washing your hands, covering all open wounds with a clean bandage, and not sharing any personal items like razors or towels.

5. As used in the second paragraph, what does the term *ubiquitous* mean?

- A. Indigenous
- B. Often ignored
- C. Found everywhere
- D. Dangerous

6. What is the main idea of the passage?

- A. Methicillin may prove to be the best way to keep MRSA from killing more hospital patients.
- B. A new textile is the best bet to protect hospital patients against the dangers of MRSA.
- C. There are many different strains of MRSA, but only one is potentially fatal.
- D. MRSA is a scourge both in and out of hospitals, but there may be ways to reduce the risk.

7. Which of the following statements is an opinion?

- A. Hand-washing stations are one means of combatting MRSA infection.
- B. Not all *Staphylococcus* bacteria are resistant to antibiotics.
- C. Hospitals in the United States should quickly adopt the use of new germ-fighting textiles.
- D. MRSA infection kills more people in the United States than does HIV/AIDS.

8. Which statement would *not* be inferred by the reader?

- A. Hospitals may soon limit the spread of infection with a new textile.
- B. MRSA begins by infecting the skin.

- C. You are most likely to contract MRSA in a crowded location.
- D. Used clothing stores may harbor MRSA.

Fat for Fitness

After years of bad publicity it may sound absurd, but many dietitians are now extolling the virtues of consuming fat. According to Laurie Tansman, a nutritionist at Mt. Sinai Medical Center in New York, fat “not only plays a vital role in the health of the membrane of every cell in our body, it also helps protect us from a number of key health threats.” Fat is a critical part of your necessary food intake, and it is generally recommended that 30 percent of your daily calories should come from fat. Without it, your body would not be able to absorb or transport vitamins A, D, E, and K. Body temperature, hair follicles, and skin cells are all reliant upon the consumption of fats to function properly.

There is near-universal agreement that the healthiest fats are unsaturated fats. This list of healthy fats includes olive oil, sesame oil, walnut oil, avocado oil, and omega-3 fatty acids. These fats, when eaten in moderation, can lower cholesterol levels, thereby reducing your risk for heart disease.

Saturated fats are considered less healthy than unsaturated fats and should be consumed more sparingly. Most saturated fats are found in animal products, such as beef, pork, and chicken. The least healthy of all fats are trans-fatty acids, or trans fats. These fats can occur in small amounts naturally in animal products, but they are more commonly found as artificially produced oils used for frying foods or softening prepackaged snacks. These fats will increase your risk for heart disease; the U.S. Dietary Guidelines recommend that you consume as few trans fats as possible.

9. Which statement is *not* a detail from the passage?

- A. Nearly one-third of your calories should come from fat.
- B. Canola oil is one source of unsaturated fat.
- C. Most saturated fats are derived from animal products.
- D. Trans fatty acids put you at risk for heart disease.

10. What is the meaning of the word *moderation* as used in the second paragraph?
- A. Adequate amounts
 - B. Intervals of time
 - C. Excess
 - D. Variation
11. Choose the best summary of the passage.
- A. We often think of all fat as bad, but it is clear that certain fats, especially the more healthful unsaturated fats, are important for bodily function.
 - B. If you must consume some fat, be sure to choose unsaturated fats such as oils rather than saturated fats found in prepackaged snacks or animal products.
 - C. Doctors and researchers have discovered that without the calories found in fat, people would not have functioning metabolisms.
 - D. Some intake of saturated fat is necessary, but you should stay away from the kind of fat found in fried food, which can lead to heart disease.
12. What is the author's primary purpose in writing this essay?
- A. To entertain
 - B. To analyze
 - C. To reflect
 - D. To persuade
13. What is a conclusion that a reader could draw from this passage?
- A. It is advisable to choose unsaturated fats over saturated fats.
 - B. Saturated fats are more calorically dense than unsaturated fats.
 - C. Trans fats are more calorically dense than saturated fats.
 - D. Unsaturated fats are mostly found in animal products.

Food for Seniors

The food pyramid is a visual representation of how the different food groups can be combined to form a healthy diet. Although it was a vital part of dietary guidelines for years before being replaced by the “MyPlate” model, the pyramid was constantly analyzed and revised as additional study was done in nutritional fields. A few years ago, the pyramid underwent a change regarding the unique dietary needs of seniors.

Modifications in the pyramid for older adults included an emphasis on fiber and calcium, as well as on vitamins D and B₁₂. By incorporating these changes, the pyramid indicated that the nutrients found in a person’s routine daily consumption typically are not enough for seniors. Seniors need supplementation.

As people age, they tend to move less and thus need fewer calories to maintain their weight. Because seniors tend to eat a more limited amount, dietitians urge them to choose wisely. They are urged to eat nutrient-rich meals featuring such food as fruits, vegetables, low-fat dairy products, and high-fiber whole grains.

The revised pyramid also focused on the importance for older people of ingesting adequate amounts of fluids daily. This helps to ensure proper digestion and prevent dehydration.

Finally, the revised pyramid included information on incorporating exercise and other physical activities into the lives of older adults. Suggestions included swimming, walking, or simple yard work. Because recent reports have stated that obesity levels for people older than 70 years of age are climbing, performing some type of regular exercise is more essential than ever.

14. What is the main idea of the passage?

- A. Senior citizens need to increase their calcium and vitamin D intake.
- B. The food pyramid was revised to reflect the needs of seniors.
- C. Physical activity is a new addition to the food pyramid.
- D. The revised food pyramid looks more like a food square.

15. What is the meaning of the word *supplementation* as used in the second paragraph?

- A. Extra
 - B. Organization
 - C. Attachment
 - D. Revision
16. Identify the overall tone of the essay.
- A. Idealistic
 - B. Theatrical
 - C. Unconcerned
 - D. Pragmatic
17. Which of the following is *not* mentioned as being important for seniors?
- A. Vitamin B₁₂
 - B. Calcium
 - C. Nitrates
 - D. Exercise

You're Getting Sleepy ...

Most people get a little grumpy when they do not get enough sleep, but when it comes to children, the problem may be more than just some extra irritation. Lack of sleep may also affect their weight as well as their overall behavior.

A study conducted in New Zealand at the University of Auckland and published in the medical journal *Sleep* followed almost 600 children from infancy through seven years of age. Researchers observed the children's sleep patterns and found that generally they slept less on the weekends than during the week and even less during the summer months. According to the findings, the children who tended to sleep the least were at greater risk for being overweight and/or experiencing behavioral problems. In fact, those who regularly slept less than nine hours a night were three times more likely than longer sleepers to be obese and to show signs of attention deficit disorder (ADD) and attention deficit hyperactivity disorder (ADHD). These

results were based on questionnaires completed by the children's parents and teachers.

How does sleep affect weight? The answer to that is still not clear, but experts suspect that chronic sleep deprivation somehow alters the hormones involved in appetite control and metabolism. This is a connection that still needs to be explored to be better understood.

How much sleep is enough for a child? Experts recommend that preschoolers get 11 to 13 hours of sleep each night, whereas school-age children should get between 10 and 11 hours per night. Many children average only 8 hours. The study concluded that sleep duration is one risk factor that can be fairly easily altered to prevent future health problems for today's young people.

18. What conclusion can a reader draw about the connection between sleep and young children?
- A. Lack of sleep causes children to fail in school.
 - B. Inadequate rest raises the risk of behavioral and physical problems.
 - C. Sleeping less than 10 hours a night is guaranteed to result in obesity.
 - D. Eight hours of sleep each night meets the requirements of most children.
19. Which of the following statements is an opinion?
- A. The connection between sleep and weight should be explored.
 - B. Many young children average only eight hours of sleep a night.
 - C. People who sleep less are more likely to be obese.
 - D. Researchers in New Zealand studied almost 600 children.
20. What is the meaning of the word *duration* as used in the last paragraph?
- A. Basis
 - B. Extent
 - C. Cure
 - D. Solidity

21. What is the main idea of the passage?

- A. Researchers disagree on the optimum amount of sleep for children.
- B. Bad sleep habits may result in attention deficit disorders.
- C. Lack of sleep may have negative effects on weight and behavior.
- D. Sleep deprivation appears to alter certain hormones in children.

Killer Cosmetics

In recent years, there have been frightening headlines about harmful ingredients such as mercury and lead in ordinary cosmetics. However, these are hardly the first examples of people paying a heavy price to conform to cultural ideals of beauty. That is a tradition that has been around for centuries.

Ancient Egyptians decorated their eyes with malachite (a green ore of copper), galena (a lead sulfide), and kohl (a paste made from soot, fat, and metals such as lead). This may have made them look more beautiful, but it also led to health problems such as insomnia and mental confusion.

The ancient Greeks went even further. They applied lead to their entire faces, supposedly to clear their complexions of any blemishes and improve the coloration of the skin. Health problems that resulted ranged from infertility to insanity. The lead ointment whitened their faces—a sure sign of beauty—and they then added some red lead to their cheeks for that rosy glow. As if that toxic mess were not enough, they also used hair dyes that contained lead. The Romans adopted these practices, and some historians suspect that lead poisoning was part of what later led to the fall of the Roman Empire.

As recently as 2007, lipsticks for sale were found to contain lead, and mascara was found to contain mercury. An additional concern is phthalates, industrial chemicals that can cause birth defects and infertility. They are found in personal care products such as shampoos, lotions, perfume, and deodorants.

An old saying states that beauty has a price. Sometimes that price may be much higher than consumers realize. Know what you are putting on your face.

22. What is the author's attitude toward the use of cosmetics?
- A. Sympathetic
 - B. Mocking
 - C. Tolerant
 - D. Disapproving
23. What is the meaning of the word *conform* as used in the first paragraph?
- A. Authorize
 - B. Fit in
 - C. Hand over
 - D. Bewilder
24. The author describes cosmetics in each of the following cultures EXCEPT _____.
- A. Greek
 - B. Egyptian
 - C. Roman
 - D. Native American
25. What is the author's primary purpose in writing this essay?
- A. To persuade
 - B. To analyze
 - C. To entertain
 - D. To reflect

Lifewings

What do pilots, astronauts, physicians, and risk managers have in common? In this case, they are all part of an organization based in Memphis, Tennessee, called Lifewings Partners. This unusual group focuses on finding ways to eliminate mistakes and accidents in medical settings within the United States.

Lifewings Partners emphasizes the need for a watchdog in various medical settings. According to the Institute of Health, approximately 98,000 patients die each year in U.S. health care settings due to nothing more than medical error. Examples of medical errors include the man who had the wrong testicle removed in a Los Angeles hospital, a young boy who went in for a typical hernia surgery and ended up with brain damage from the anesthesia, and a hospital in Rhode Island that performed brain surgery on the wrong side of the brain—three times on three different patients in less than a year.

In addition to making internal changes in medical settings by changing procedures and establishing checklists, Lifewings Partners also works to educate patients on safety before they even enter the hospital. The company suggests that all consumers do the following: go online to obtain public information on a hospital's safety, talk to their doctors to see what safety standards are in place already, and ask professionals about which facilities tend to have the best safety records. Founder Steve Harden says, "Just because a hospital has a great reputation for cutting-edge medicine doesn't necessarily mean the hospital is the safest place to go for routine procedures." After all, some mistakes are too big and too irrevocable to risk.

26. Which of the following is *not* listed as a detail in the passage?

- A. Many patients die each year from medical error.
- B. Lifewings Partners educates patients on consumer safety.
- C. Steve Harden is the founder of Lifewings Partners.
- D. The most common medical error is overmedication.

27. The word *watchdog* as used in the second paragraph of the passage can best be defined as _____.

- A. companion
- B. guard
- C. manager
- D. punisher

28. Which statement could be inferred by the reader from the last paragraph of the passage?
- A. Procedures that Lifewings Partners recommends are always effective.
 - B. Medical mistakes can happen at even the best hospitals.
 - C. City hospitals know more than others about cutting-edge medicine.
 - D. Medical mistakes will one day be completely eradicated.
29. Which statement about Lifewings Partners is a fact?
- A. Everyone should have access to Lifewings.
 - B. The people in Lifewings are modern heroes.
 - C. Steve Harden was clever to found Lifewings.
 - D. Lifewings is based in Memphis, Tennessee.
30. What is the main idea of the passage?
- A. Medical mistakes are made in health centers every day.
 - B. Lifewings Partners is made up of an eclectic mix of people.
 - C. Lifewings Partners is working hard to prevent medical errors.
 - D. Consumers should talk to their doctors about hospital safety.

A New Use for Acupuncture

Over the years, acupuncture has become a more widely accepted type of alternative medicine. It is used for a wide variety of ailments, and if a recent study from Germany is valid, relieving menstrual pain can be added to the continuously growing list.

Traditionally nonsteroidal anti-inflammatory drugs (NSAIDs) are the typical treatment for menstrual discomfort. However, as many consumers and physicians are aware, NSAIDs have a number of side effects, including nausea, vomiting, rash, dizziness, headache, and drowsiness. Acupuncture rarely has any kind of side effects other than the occasional stinging sensation when the needle is inserted or a deep ache around it after it is in place.

Acupuncture has proven helpful with relieving a number of kinds of pain, so researchers at Charité University Medical Center in Berlin wanted to find out how effective it might be in combating cramps and other menstrual discomforts.

More than 200 women were enrolled in the study, and after three months and approximately 10 sessions, the women who were treated with acupuncture reported significantly less pain than those in the control group who received no treatment at all. They also reported a 33 percent improvement in their symptoms. Because of these findings, the researchers came to the conclusion that “acupuncture should be considered as a viable option in the management of these patients.”

- 31.** What conclusion is suggested by this study from Germany?
- A. So far, acupuncture does not have much credibility as a treatment option.
 - B. Acupuncture can relieve women of all menstrual discomfort.
 - C. NSAIDs are generally more effective than acupuncture for treating cramps.
 - D. Acupuncture is a reasonable treatment choice for cramps.
- 32.** What is the meaning of the word *viable* as used in the last paragraph?
- A. Reasonable
 - B. Unresolved
 - C. Contemporary
 - D. Consistent
- 33.** Identify the overall tone of the essay.
- A. Cautionary
 - B. Unconvinced
 - C. Optimistic
 - D. Insensitive
- 34.** Which detail is *not* given as a side effect of NSAIDs?
- A. Nausea

- B. Headache
- C. Weight loss
- D. Dizziness

Caffeine and Pregnancy

The health risks of coffee have long been debated, but a recent study has added another argument against too much coffee consumption. This study looked at the effect of drinking coffee on pregnant women. Conducted by physicians at Kaiser Permanente, the study explored the connection between caffeine and the risk of miscarriage.

This study followed more than 1,000 women who became pregnant within a two-year period. The amount of caffeine they drank was logged, as well as which women experienced a miscarriage. The results, as published in the January 2008 issue of the *American Journal of Obstetrics and Gynecology*, stated that the risk of miscarriage more than doubled in women who consumed 200 mg or more of caffeine per day—about what is found in two cups of coffee.

Why does caffeine carry this risk? Researchers are not sure, but they theorize that the caffeine restricts blood flow to the placenta. This, in turn, can harm the developing fetus.

Does this mean the physicians will start advising women to quit drinking coffee while pregnant? Yes and no. Some doctors will certainly take this report to heart and encourage their patients to stay away from more than one cup of coffee a day, just as they recommend not drinking alcohol or smoking cigarettes. Others are not so convinced and doubt that this single study is enough to overturn the established guidelines of the American College of Obstetricians and Gynecologists. Instead, they believe that a lot more research needs to be done.

35. What is the main idea of the passage?

- A. Coffee carries some obvious health risks for people.
- B. Two cups of coffee a day may be enough to raise the risk of miscarriage.
- C. There is a link between miscarriages and morning sickness.

- D. Miscarriage rates are on the rise internationally.
36. What is the meaning of the word *overturn* in the last paragraph of the passage?
- A. Justify
 - B. Invalidate
 - C. Support
 - D. Review
37. Based on this passage, what can the reader infer about the advice physicians will give their pregnant patients about coffee consumption?
- A. Almost all of them will advise women to stop drinking any caffeine until after the baby is born.
 - B. The majority will ignore the study altogether and continue to advise caffeine in moderation as before.
 - C. All of them will demand additional research be done before they change what they tell their patients.
 - D. Some will continue to make their normal recommendations about caffeine, while others will be more cautious than before.
38. Which of the following statements is an opinion?
- A. People continue to debate the risks of caffeine.
 - B. Doctors studied the link between caffeine and miscarriage.
 - C. Two cups of coffee hold about 200 mg of caffeine.
 - D. To be safe, pregnant women must avoid coffee.

A New Vision for PE

In some schools around the country, physical education classes look a lot different than they did a generation or two ago. Kids are still in motion, stretching, running, lifting, and sweating. But instead of everyone doing the same activity at the same time as a team, they are exercising independently. They are being taught movements and activities that their teachers hope

they will incorporate into their lives rather than just perform long enough to get a good grade.

By teaching kids the pleasure of exercise, gym teachers hope to instill important lessons about maintaining good health, staying fit, and keeping weight under control. Students can also participate in low-impact sports like yoga, martial arts, and weight lifting. Instead of playing basketball or baseball, they can focus on more general skills like passing the ball.

A growing number of physical education (PE) teachers are also putting more of an emphasis on general nutrition and health. With the continual increase in the number of children who are obese, there is greater pressure to teach students how to stay fit. To do this, gym teachers have to look at new ways to introduce exercise to their students that will not intimidate or overwhelm them but instead intrigue and engage them.

One other difference found in some modern gym classes is the grading system. Instead of being graded on their ability to run laps in a set time or make a certain number of baskets, the students are graded simply on the effort they make in the class. Some even get extra credit if they are the sweatiest students in the room!

39. What would be the best title for this passage?
- A. "Being a Team in PE"
 - B. "A New Kind of Grade"
 - C. "Learning Martial Arts"
 - D. "PE for School and Life"
40. What is the meaning of the word *instill* as used in the second paragraph of the passage?
- A. Impart
 - B. Propagandize
 - C. Demand
 - D. Create
41. Which is *not* listed as an example of a low-impact sport?
- A. Martial arts

- B. Basketball
- C. Yoga
- D. Weight lifting

42. What can the reader infer about the “sweatiest students” referred to in the last sentence in the passage?
- A. These students are more overweight than anyone else.
 - B. These students have worked harder during class.
 - C. These students do not need extra credit.
 - D. These students are behind all of their classmates.

Studying Alzheimer’s

Years of research have proven that Alzheimer’s disease, along with other types of dementia, elevates the risk of dying early in the majority of patients. In a recent study performed by the Institute of Public Health at the University of Cambridge, scientists set out to determine exactly how long people were likely to survive following the onset of dementia.

Currently, approximately 24 million people throughout the world suffer from the memory loss and orientation confusion that comes with Alzheimer’s disease and other forms of dementia. That number appears to double every 20 years, and experts predict that by the year 2040, there will be 81 million people living with some level of the condition. The more researchers and doctors can learn about what causes the problem, as well as how to treat it, the better prepared they will be to handle these millions of future patients.

To determine how people’s life spans are affected by this medical condition, the scientists studied 13,000 seniors for a period of 14 years. During that time, 438 people developed dementia, the vast majority of whom died. The factors of age, disability, and gender were analyzed to see how they affected longevity as well.

Conclusions from the study showed that women tended to live slightly longer than men, averaging 4.6 years from the onset of dementia, as opposed to 4.1 years for men. The patients who were already weak or frail at the onset of the dementia died first, regardless of age. Marital status,

living environment, and degree of mental decline, although relevant factors, were not shown to be influential.

Researchers from the University of Cambridge hope that this new information will help patients, clinicians, care providers, service providers, policy makers, and others who deal with dementia. The more they know, the better they will be able to respond to this heartbreaking condition.

43. What is the main idea of the passage?
- A. More than 24 million people suffer from some form of dementia.
 - B. A recent study looked at the longevity of dementia sufferers.
 - C. Women with dementia live slightly longer than men do.
 - D. Dementia is a heartbreaking disease that is hard on families.
44. What is the meaning of the word *onset* as used in the first paragraph?
- A. Cure rate
 - B. Incubation period
 - C. Remainder
 - D. Commencement
45. What is the author's primary purpose in writing this essay?
- A. To persuade
 - B. To entertain
 - C. To inform
 - D. To analyze
46. Identify the overall tone of the essay.
- A. Anxious
 - B.irate
 - C. Indifferent
 - D. Sympathetic
47. Choose the best summary of the passage.

- A. Marital status, age, and gender seem not to be issues in the longevity of patients who suffer from dementia. Out of 438 people with dementia, the vast majority were dead within a few years.
- B. In hopes of discovering information that can assist with care for dementia patients, Cambridge researchers studied 13,000 seniors. They found that dementia sufferers lived on average slightly longer than four years.
- C. Alzheimer's is just one form of dementia, a medical condition that affects millions and whose prevalence is expected to increase greatly over the next few decades.
- D. Researchers at Cambridge University have discovered that men with dementia live longer than women with the condition, but frailty is a definite indicator of an early death in patients with dementia.

CHECK YOUR WORK ON THIS SECTION ONLY.**

VOCABULARY AND GENERAL KNOWLEDGE

50 items

Suggested time: 50 minutes

1. Select the meaning of the underlined word in the following sentence.

The chemicals in plastic containers may be deleterious to children's health.

- A. Harmful
- B. Deleting
- C. Delightful
- D. Inoffensive

2. What is another word for *deferentially*?

- A. Imperfectly
- B. Respectfully
- C. Competently
- D. Energetically

3. What is the meaning of *perused*?

- A. Passed judgment on
- B. Engaged in
- C. Read thoroughly
- D. Took notes about

4. Select the meaning of the underlined word in the following sentence.

What is the prognosis for those accident victims?

- A. Expected outcome
- B. Treatment option
- C. Fabrication
- D. Fabrication

5. If a patient's condition is upgraded, he is _____.

- A. getting worse
- B. improving in status
- C. released from the hospital
- D. approved for surgery

6. *Concise* is best defined as being _____.

- A. exact
- B. brief
- C. accurate
- D. assembled

7. Select the meaning of the underlined word in the following sentence.

The night nursing staff is accountable for those records.

- A. Receptive
- B. Notorious
- C. Responsible
- D. Preoccupied with

8. A blood vessel that is distended is _____.

- A. overturned
- B. swollen
- C. twisted
- D. overlong

9. Something that is viscous is thick and sticky. Another word for this might be _____.

- A. fluid
- B. molten
- C. gelatinous
- D. malleable

10. An overt symptom is _____.

- A. dangerous
- B. hidden
- C. obvious
- D. controlled

11. What is another word for *toxin*?

- A. Impurity
- B. Element
- C. Remedy
- D. Poison

12. Select the meaning of the underlined word in the following sentence.

The pain of childbirth may often be acute.

- A. Escalating

- B. Emergent
- C. Eased
- D. Intense

13. Select the meaning of the underlined word in the following sentence.

We will do more tests, as the data so far are inconclusive.

- A. Unsettled
- B. Convincing
- C. Unfavorable
- D. Bewildering

14. Which word names an infected swelling with liquid inside?

- A. Blast
- B. Gash
- C. Hive
- D. Boil

15. What is another word for *asymmetric*?

- A. Proportionate
- B. Impartial
- C. Uneven
- D. Magnified

16. What is the meaning of *counterfeit*?

- A. Over-the-counter
- B. Foreign
- C. Fake
- D. Unidentified

17. What is the best description for the word *efficacy* in the following sentence?

The quality, safety, and efficacy of counterfeit medicines are not known.

- A. Effectiveness
- B. Significance
- C. Corollary
- D. Conclusion

18. If illegal operators are *posing* as licensed pharmacists, what are they doing?

- A. Modeling
- B. Inquiring
- C. Positioning
- D. Pretending

19. One muscle in the shoulder is the _____.

- A. dendrite
- B. delphic
- C. deltoid
- D. dentate

20. Select the meaning of the underlined word in the following sentence.

It is a clear, yellowish liquid having a peculiar ethereal, fruity odor.

- A. Aerated
- B. Incapacitating
- C. Delicate
- D. Distinctive

21. The voice box may be called the _____.

- A. larynx
- B. lynx
- C. pharynx
- D. phalanx

22. Select the meaning of the underlined word in the following sentence.

The interns observed the contour of the patient's rash.

- A. Shape
- B. Answers
- C. Amount
- D. Extension

23. What is the meaning of *incorrigible*?

- A. Clever
- B. Potential
- C. Incurable
- D. Undistinguished

24. Select the meaning of the underlined word in the following sentence.

The patient will need to undergo additional testing.

- A. Fail
- B. Offer
- C. Experience
- D. Succumb

25. *Ventral* refers to which part of the body?

- A. Top
- B. Bottom
- C. Front
- D. Back

26. What is the best description for the term *anodyne*?

- A. Emulsified
- B. Liquefied
- C. Contaminated
- D. Painkilling

27. Select the meaning of the underlined word in the following sentence.

At this point, we are providing mainly palliative care.

- A. Scientific
- B. Surgical
- C. Soothing

- A. \$0.90
- B. \$1.35
- C. \$1.80
- D. \$3.60

35. What date in Arabic numerals is Roman numeral MCMLV? (Enter numeric value only.)

36. Lulu is 5 years younger than her sister, who is 7 years older than their 15-year-old cousin. How old is Lulu?

- A. 27
- B. 22

- C. 19
- D. 17

37. Multiply: $0.05 \times 0.22 =$

- A. 1.1
- B. 0.11
- C. 0.011
- D. 0.0011

38. Multiply: $0.6 \times 0.06 =$

- A. 0.0036
- B. 0.036
- C. 0.36
- D. 3.6

39. If the outside temperature is currently 22 degrees on the Celsius scale, what is the approximate temperature on the Fahrenheit scale?

- A. 56°F
- B. 62°F
- C. 66.5°F
- D. 71.6°F

40. A landscaping plan is drawn on a 1:50 scale. If a deck in the plan measures 12 cm by 10 cm, how large is the deck in real life?

- A. 12 m by 10 m
- B. 6 m by 5 m
- C. 5 m by 2 m
- D. 4 m by 3 m

41. A team from the highway department can replace 14 streetlights in 7 hours of work. If they work a 30-hour week at this job, in how many weeks will they replace all 120 downtown streetlights?

- A. $1\frac{1}{2}$ weeks

- B. 2 weeks
- C. $2\frac{1}{2}$ weeks
- D. 3 weeks

42. Divide: $4.5 \div 0.9 =$

- A. 0.05
- B. 0.5
- C. 5
- D. 50

43. Subtract and simplify: $\frac{4}{10} - \frac{1}{4} =$

- A. $\frac{5}{20}$
- B. $\frac{3}{10}$
- C. $\frac{3}{20}$
- D. $\frac{9}{40}$

44. If a helicopter flies at about 80 mph, how long will it take to travel 140 miles?

- A. 1 hour 15 minutes
- B. 1 hour 20 minutes
- C. 1 hour 30 minutes
- D. 1 hour 45 minutes

45. Subtract and simplify: $5\frac{1}{4} - 3\frac{5}{6} =$

- A. $2\frac{1}{6}$
- B. $1\frac{1}{2}$
- C. $1\frac{7}{24}$
- D. $1\frac{5}{12}$

46. Express $\frac{9}{25}$ as a decimal.

- A. 0.09
- B. 0.18
- C. 0.9

D. 0.36

47. 105 is 35% of what number? (Enter numeric value only.)

48. Wallace expects a 3% raise on his salary of \$36,055. What will his salary be then?

A. \$36,375.20

B. \$37,095

C. \$37,136.65

D. \$38,010.25

49. The nursing staff is currently composed of 20 female and 5 male nurses. Over the next year, the clinic hopes to increase the male nursing staff to equal at least 25% of the total nursing staff. If everyone now working retains his or her job, what is the least number of people the clinic will need to hire? (Enter numeric value only.)

50. How many ounces are there in 4 cups?

A. 16 ounces

B. 24 ounces

C. 28 ounces

D. 32 ounces

Suggested time: 25 minutes

1. Which organelle is the site of energy production?

- A. Mitochondrion
- B. Vacuole
- C. Cell membrane
- D. Ribosome

2. What happens to glucose during glycolysis?

- A. Its energy is entirely lost.
- B. It splits into molecules of pyruvic acid.
- C. It is stored in NADH.
- D. It joins with molecules of citric acid.

3. What process do cells in the tip of a plant's root undergo to increase in number?

- A. Meiosis
- B. Cytokinesis
- C. Fractioning
- D. Mitosis

4. How do RNA and DNA derive their names?

- A. From the sugar each contains
- B. From the structure of their nucleotides
- C. From the information they transfer
- D. From their formative processes

5. Huntington's disease is carried on the dominant allele. In a situation where two heterozygous parents have the disease, what percentage of their offspring are predicted to be disease-free?

- A. 0%
- B. 25%
- C. 50%
- D. 100%

6. If bacteria are placed in a strong solution of salt water, they will shrink as water moves out of the bacteria. What is this process called?

- A. Dehydration synthesis
- B. Hydrolysis
- C. Osmosis
- D. Isotonic transport

7. Which animal has an open transport system?

- A. Grasshopper
- B. Earthworm
- C. Dolphin
- D. Chicken

8. How does an enzyme work on a chemical reaction that occurs in a substrate?

- A. An enzyme slows down the chemical reaction.
- B. An enzyme speeds up the chemical reaction.
- C. An enzyme has no effect on the chemical reaction.
- D. An enzyme stops most chemical reactions.

9. Where is the ovary located in a flowering plant?

- A. Anther
- B. Pistil
- C. Stamen
- D. Calyx

10. Two organisms live in a relationship from which both benefit. What is this called?

- A. Mutualism
- B. Parasitism
- C. Commensalism
- D. Competition

11. Which gives the order of four taxonomic categories from least to most specific?
- A. Kingdom, phylum, class, order
 - B. Kingdom, phylum, order, class
 - C. Kingdom, order, phylum, class
 - D. Kingdom, class, order, phylum
12. Which molecules contain only carbon, hydrogen, and oxygen?
- A. Lipids and proteins
 - B. Carbohydrates and lipids
 - C. Proteins and carbohydrates
 - D. Nucleic acids and proteins
13. Which structure is found in protists but not in monerans?
- A. Golgi apparatus
 - B. Chromosome
 - C. Cytoplasm
 - D. Cell membrane
14. How does yeast reproduce?
- A. Binary fission
 - B. Spore formation
 - C. Budding
 - D. Cloning
15. What takes place during anaphase?
- A. Chromosomes move to opposite ends of the spindle.
 - B. Nuclear membrane and nucleoli disintegrate.
 - C. Chromatids line up at the center of the spindle.
 - D. Nuclear membrane and nucleoli form.
16. Which is *not* found in the nucleotide of DNA?
- A. Simple sugar

- B. Nitrogen base
 - C. Phosphate group
 - D. Citric acid
17. Hemophilia is a sex-linked trait carried on the X chromosome. In an example of a male with hemophilia and a female carrier, what ratio of the offspring are predicted neither to carry nor to manifest the disease?
- A. 0 female : 1 male
 - B. 1 female : 1 male
 - C. 1 female : 0 male
 - D. 2 female : 1 male
18. Which is *not* a product of the Krebs cycle?
- A. ATP
 - B. Carbon dioxide
 - C. Glucose
 - D. NADH
19. A student was asked to count birds in a given location over a 24-hour period. Which count would make her data most valid?
- A. Count birds at one feeder every 6 hours.
 - B. Count birds at three feeders at noon and 6:00 P.M.
 - C. Count birds at one feeder at noon and 6:00 P.M.
 - D. Count birds at three feeders every 6 hours.
20. Whose efficiency of energy is greater?
- A. Herbivore
 - B. Carnivore
 - C. Omnivore
 - D. Decomposer
21. How should a researcher test the hypothesis that radiation from cell phones is significant enough to raise the temperature of water in a test

tube?

- A. Dial a cell phone that rests beside a test tube of water, let it ring for two minutes, and record the temperature of the water before and after the two-minute interval.
- B. Dial a cell phone that rests beside a test tube of water; let it ring for two, three, and four minutes; and record the temperature of the water before and after each interval.
- C. Use three different brands of cell phone; dial each as it rests beside its own test tube of water, let it ring for two minutes, and record the temperature of the water before and after the two-minute interval.
- D. Use three different brands of cell phone, dial each and let one ring for two minutes, one for three minutes, and one for four minutes; record the temperature of the water before and after each interval.

22. What is the function of decomposition in the carbon cycle?

- A. To produce light energy
- B. To convert carbon to fuel
- C. To release carbon dioxide
- D. To store food for consumers

23. Which light color would be most effective for growing green plants indoors?

- A. Blue
- B. Yellow
- C. Green
- D. Orange

24. Which bacteria are spherical in shape?

- A. Clostridia
- B. Bacilli
- C. Spirilla
- D. Cocci

25. What is the term for the breakdown of glycogen into glucose subunits?

- A. Hydrolysis
- B. Reduction
- C. Metabolism
- D. Transpiration

CHEMISTRY

25 items

Suggested time: 25 minutes

1. The energy required to remove the outermost electron from an atom is called _____.
 - A. covalent bonding
 - B. electronegativity
 - C. atomic radius
 - D. ionization energy
2. In the presence of an acid, what color is phenolphthalein?
 - A. Clear
 - B. Blue
 - C. Pink
 - D. Red
3. Fifty-six kg of a radioactive substance has a half-life of 12 days. How many days will it take the substance to decay naturally to only 7 kg?
 - A. 8
 - B. 12
 - C. 36
 - D. 48

4. Which compound contains a polar covalent bond?
- A. O_2
 - B. F_2
 - C. Br_2
 - D. H_2O
5. $\text{AB} \rightarrow \text{A} + \text{B}$ represents what type of chemical reaction?
- A. Synthesis
 - B. Decomposition
 - C. Single replacement
 - D. Double replacement
6. Among the following elements, which is a nonmetal?
- A. Mercury
 - B. Magnesium
 - C. Sulfur
 - D. Potassium
7. You contain two odorous gases in vials with porous plugs. Gas A has twice the mass of Gas B. Which observation is most likely?
- A. You will smell Gas A before you smell Gas B.
 - B. You will smell Gas B before you smell Gas A.
 - C. You will smell Gas A but not Gas B.
 - D. You will smell Gas B but not Gas A.
8. The three important allotropic forms of phosphorus are red, white, and _____.
- A. green
 - B. gray
 - C. black
 - D. silver

9. Here are the solubilities of four substances at 0°C, in grams of solute per 100 mL of water.

Solid citric acid	49
Solid potassium phosphate	44
Gaseous nitrogen	0.0030
Gaseous oxygen	0.0070

If the temperature increases to 20°C, what would you expect to happen to the solubility figures?

- A. Citric acid and potassium phosphate will decrease; nitrogen and oxygen will increase.
 - B. Citric acid and potassium phosphate will increase; nitrogen and oxygen will decrease.
 - C. All four figures will increase.
 - D. All four figures will decrease.
10. What is the name of the compound $\text{CH}_3\text{-CH}_2\text{-CH}_2\text{-CH}_3$?
- A. Cyclobutane
 - B. Butane
 - C. Butene
 - D. Butyne
11. When balanced, the reaction $\text{Fe} + \text{O}_2 \rightarrow \text{Fe}_2\text{O}_3$ will be
- A. $2\text{Fe} + 2\text{O}_2 \rightarrow 3\text{Fe}_2\text{O}_3$
 - B. $4\text{Fe} + 6\text{O}_2 \rightarrow 6\text{Fe}_2\text{O}_3$
 - C. $2\text{Fe} + 3\text{O}_2 \rightarrow 2\text{Fe}_2\text{O}_3$
 - D. $4\text{Fe} + 3\text{O}_2 \rightarrow 2\text{Fe}_2\text{O}_3$
12. Which two elements are most alike in reactivity?
- A. He and H

- B. K and Ar
- C. Cl and P
- D. Ba and Mg

13. How many electrons are shared in a single covalent bond?

- A. 1
- B. 2
- C. 3
- D. 4

14. How many neutrons are in an atom of carbon-12?

- A. 2
- B. 4
- C. 6
- D. 24

15. What is the correct electron configuration for magnesium?

- A. $1s^2 2s^2$
- B. $1s^2 2s^2 2p^6$
- C. $1s^2 2s^2 2p^6 3s^2$
- D. $1s^2 2s^2 2p^6 3s^2 3p^1$

16. What is the molarity of a solution containing 0.45 moles of NaCl in 4 liters?

- A. 0.11 M NaCl
- B. 0.45 M NaCl
- C. 1.8 M NaCl
- D. 8.9 M NaCl

17. Where would you expect tap water to fall on the pH scale?

- A. Between 1 and 3
- B. Between 4 and 6

- C. Between 6 and 8
 - D. Between 8 and 10
18. To the nearest whole number, what is the mass of one mole of sodium chloride?
- A. 36 g/mol
 - B. 43 g/mol
 - C. 58 g/mol
 - D. 72 g/mol
19. What form of radiation is composed of electrons traveling at around 16,000 km/sec?
- A. Alpha radiation
 - B. Beta radiation
 - C. Gamma radiation
 - D. Delta radiation
20. What is the correct name of ZnSO_4 ?
- A. Zinc sulfate
 - B. Zinc sulfide
 - C. Zinc sulfur
 - D. Zinc oxide
21. What is the oxidation state of the oxygen atom in the compound NaOH ?
- A. -2
 - B. -1
 - C. 0
 - D. +2
22. Which of these intermolecular forces would have the lowest boiling point?
- A. Dipole-dipole interaction

- B. London dispersion force
 - C. Keesom interaction
 - D. Hydrogen bonding
23. Concentrated HCl has a molarity of 12.0. What volume of concentrated HCl should be used to prepare 500 mL of a 3.00 M HCl solution?
- A. 75 mL
 - B. 100 mL
 - C. 125 mL
 - D. 150 mL
24. What is the correct formula for potassium chloride?
- A. NaCl
 - B. KCl
 - C. KCl₂
 - D. ClK
25. Which of these elements has the greatest atomic mass?
- A. Au
 - B. Ba
 - C. I
 - D. W

<p>STOP. IF YOU HAVE TIME LEFT OVER, CHECK YOUR WORK ON THIS SECTION ONLY.</p>

ANATOMY AND PHYSIOLOGY

25 items

Suggested time: 25 minutes

1. The lateral side of the right knee would be _____.

- A. the kneecap
 - B. closest to the left knee
 - C. farthest from the left knee
 - D. on the underside of the knee
2. In which part of the lungs do nearly all the gaseous exchanges between air and blood take place?
- A. Pleura
 - B. Trachea
 - C. Bronchioles
 - D. Alveoli
3. How do the intercostal muscles between the ribs assist with respiration?
- A. By protecting the delicate bronchioles and alveoli
 - B. By signaling a decrease in intra-alveolar pressure
 - C. By enlarging and reducing the space in the thorax
 - D. By maintaining a medial separation between pleurae
4. In which organ do muscles push food into the stomach via peristalsis?
- A. Mouth
 - B. Small intestine
 - C. Epiglottis
 - D. Esophagus
5. For the average person, what is true about caloric intake?
- A. It should increase with age after age 25.
 - B. It should decline with age after age 25.
 - C. It should remain constant over a lifetime.
 - D. It should decline and then increase with age.
6. The corpus callosum facilitates communication between _____.
- A. the left and right brain
 - B. the skeletal and neural systems

- C. the brain and spinal cord
- D. the thalamus and hypothalamus

7. How does the integumentary system work with the nervous system?

- A. The integumentary system removes heat from the neurons in the nervous system.
- B. The nervous system circulates nutrients outward to the integumentary system.
- C. Touch input via the integumentary system sends messages to the nervous system.
- D. Messages from the nervous system affect the color and texture of the skin.

8. When the pulmonary valve and aortic valves are open, where can blood flow?

- A. Between the two ventricles of the heart
- B. From atrium to ventricle within the heart
- C. Between the heart and the rest of the body
- D. Between the atria in the heart

9. Which might be a result of stenosis, or narrowing of a heart valve?

- A. Abdominal pain
- B. Blood clots
- C. Edema (swelling) in organs
- D. Irregular heartbeat

10. The human skull contains about how many bones?

- A. About 5
- B. About 30
- C. About 60
- D. About 210

11. The arteries are part of the _____.

- A. nervous system
- B. endocrine system
- C. lymphatic system
- D. cardiovascular system

12. Which is a secondary defense for the body against pathogens?

- A. Tears
- B. Urine
- C. Inflammation
- D. Mucus

13. Which organ system is primarily responsible for storing minerals?

- A. The skeletal system
- B. The endocrine system
- C. The lymphatic system
- D. The cardiovascular system

14. The vena cavae drain blood from the body into the _____.

- A. right atrium
- B. right ventricle
- C. left atrium
- D. left ventricle

15. Beriberi is a disease caused by lack of _____.

- A. thiamine
- B. vitamin C
- C. niacin
- D. protein

16. How does the endocrine system work with the reproductive system?

- A. The reproductive system transforms minerals into useful nutrients.
- B. The endocrine system determines the sex of the embryo.

- C. The reproductive system controls the growth of secondary sex organs.
 - D. The endocrine system produces chemicals that regulate sexual function.
17. Which hormone controls sleep, mood, and appetite?
- A. Serotonin
 - B. Oxytocin
 - C. Cortisol
 - D. Aldosterone
18. Which part of the brain is most posterior?
- A. Frontal lobe
 - B. Parietal lobe
 - C. Temporal lobe
 - D. Occipital lobe
19. Which of the following is an HDL cholesterol level that might warrant regular testing?
- A. 70
 - B. 60
 - C. 50
 - D. 40
20. How does a transverse section divide the body?
- A. Into right and left regions
 - B. Into upper and lower regions
 - C. Into front and back regions
 - D. Between the dorsal and ventral cavities
21. What is the function of amylase?
- A. Breaking down starch
 - B. Digesting fat

- C. Breaking down protein
 - D. Absorbing water
22. The spleen is part of the _____.
- A. nervous system
 - B. integumentary system
 - C. lymphatic system
 - D. urinary system
23. Which mineral is important for the formation of red blood cells?
- A. Selenium
 - B. Calcium
 - C. Magnesium
 - D. Copper
24. The dorsal body cavity is _____ to the ventral body cavity.
- A. medial
 - B. deep
 - C. posterior
 - D. anterior
25. Which organ system is primarily responsible for preventing water loss?
- A. The nervous system
 - B. The integumentary system
 - C. The lymphatic system
 - D. The urinary system

<p>STOP. IF YOU HAVE TIME LEFT OVER, CHECK YOUR WORK ON THIS SECTION ONLY.</p>

PHYSICS

25 items

Suggested time: 50 minutes

1. A kilogram of air is compressed from 1 m^3 to 0.5 m^3 . Which statement is true?
 - A. The density is doubled.
 - B. The density is halved.
 - C. The mass is doubled.
 - D. The mass is halved.

2. An airplane travels 500 miles northeast and then, on the return trip, travels 500 miles southwest. Which of the following is true?
 - A. The displacement of the plane is 1,000 miles, and the distance traveled is 0 miles.
 - B. The displacement of the plane is 1,000 miles, and the distance traveled is 1,000 miles.
 - C. The displacement of the plane is 0 miles, and the distance traveled is 0 miles.
 - D. The displacement of the plane is 0 miles, and the distance traveled is 1,000 miles.

3. A bicycle and a car are both traveling at a rate of 5 m/s . Which statement is true?
 - A. The bicycle has more kinetic energy than the car.
 - B. The bicycle has less kinetic energy than the car.
 - C. Both vehicles have the same amount of kinetic energy.
 - D. Only the car has kinetic energy.

4. A car, starting from rest, accelerates at 10 m/s^2 for 5 seconds. What is the velocity of the car after 5 seconds?
 - A. 2 m/s
 - B. 5 m/s
 - C. 50 m/s

- D. The answer cannot be determined from the information given.
5. A 10-kg object moving at 5 m/s has an impulse acted on it causing the velocity to change to 15 m/s. What was the impulse that was applied to the object?
- A. 10 kg·m/s
 - B. 15 kg·m/s
 - C. 20 kg·m/s
 - D. 100 kg·m/s
6. Which substance's volume would be most affected by temperature change?
- A. Liquid nitrogen
 - B. Salt crystals
 - C. Hydrogen gas
 - D. Iron filings
7. A box is moved by a 15 N force over a distance of 3 m. What is the amount of work that has been done?
- A. 5 W
 - B. 5 N·m
 - C. 45 W
 - D. 45 N·m
8. A 110-volt hair dryer delivers 1,525 watts of power. How many amperes does it draw?
- A. 167,750 amperes
 - B. 1,635 amperes
 - C. 1,415 amperes
 - D. 13.9 amperes
9. How do you determine the velocity of a wave?
- A. Multiply the frequency by the wavelength.

- B. Add the frequency and the wavelength.
 - C. Subtract the wavelength from the frequency.
 - D. Divide the wavelength by the frequency.
10. A 50-kg box of iron fishing weights is balanced at the edge of a table. Peter gives it a push and it falls 2 meters to the floor. Which of the following statements is true?
- A. Once the box hit the floor, it lost its kinetic and potential energy.
 - B. The box had kinetic energy when it was balanced at the edge of the table.
 - C. The box had both kinetic and potential energy after it fell.
 - D. Once the box hit the floor, it still had kinetic energy.
11. When the heat of a reaction is negative, which statement is true?
- A. The products have less energy and are less stable.
 - B. The products have more energy and are more stable.
 - C. The products have less energy and are more stable.
 - D. The products have more energy and are less stable.
12. Longitudinal waves have vibrations that move _____.
- A. at right angles to the direction of the vibrations
 - B. in the direction opposite to that of the wave
 - C. in the same direction as the wave
 - D. in waves and troughs
13. Which of the following describes a vector quantity?
- A. 5 miles per hour due southwest
 - B. 5 miles per hour
 - C. 5 miles
 - D. None of the above
14. Why are boats more buoyant in salt water than in fresh water?
- A. Salt decreases the mass of the boats.

- B. Salt increases the volume of the water.
 - C. Salt affects the density of the boats.
 - D. Salt increases the density of the water.
15. Two objects attract each other with a gravitational force of 12 units. If you double the mass of both objects, what is the new force of attraction between the two?
- A. 3 units
 - B. 6 units
 - C. 24 units
 - D. 48 units
16. Four 1.5 V batteries are connected in a series. What is the total voltage of the circuit?
- A. 1.5 V
 - B. 3.0 V
 - C. 4.5 V
 - D. 6.0 V
17. The relationship between acceleration and force is expressed in _____.
- A. Newton's first law of motion
 - B. Newton's second law of motion
 - C. Newton's third law of motion
 - D. none of Newton's laws of motion
18. A 5-cm candle is placed 20 cm away from a concave mirror with a focal length of 10 cm. What is the image distance of the candle?
- A. 20 cm
 - B. 40 cm
 - C. 60 cm
 - D. 75 cm

19. A wave in a rope travels at 12 m/s and has a wavelength of 3.2 m. What is the frequency?
- A. 38.4 Hz
 - B. 15.2 Hz
 - C. 4.6 Hz
 - D. 3.75 Hz
20. Which vehicle has the greatest momentum?
- A. A 9,000-kg railroad car traveling at 3 m/s
 - B. A 2,000-kg automobile traveling at 24 m/s
 - C. A 1,500-kg MINI Coupe traveling at 29 m/s
 - D. A 500-kg glider traveling at 89 m/s
21. How might the energy use of an appliance be expressed?
- A. Power = energy \times time
 - B. Time + energy = power
 - C. Energy = power \times time
 - D. Energy/power = time
22. A force of 12 kg stretches a spring 3 cm. How far will the spring stretch given a force of 30 kg?
- A. 6 cm
 - B. 7.5 cm
 - C. 9 cm
 - D. 10.5 cm
23. A 2,000-kg car runs around a track at 10 m/s with a centripetal acceleration of 4 m/s^2 . What is the radius of the track?
- A. 1,000 m
 - B. 400 m
 - C. 25 m
 - D. 12 m

24. Two 5-ohm resistors are placed in a series and wired into a 100-V power supply. What current flows through this circuit?
- A. 2 amp
 - B. 10 amp
 - C. 20 amp
 - D. 50 amp
25. An object with a charge of $4\ \mu\text{C}$ is placed 1 meter from another object with a charge of $2\ \mu\text{C}$. What is the magnitude of the resulting force between the objects?
- A. 0.04 N
 - B. 0.072 N
 - C. 80 N
 - D. 8×10^{-6} N

A2 PRACTICE TEST 2 EXPLANATORY ANSWERS

Reading Comprehension

1. (A) Remember that the main idea is the most important theme, one that carries throughout the passage. If someone asked you what this passage was about, you would be most likely to answer “the role of bacteria in the development of the immune system,” making A the best answer.
2. (B) Details A and C appear in paragraph 2, and detail D is in the opening sentence of paragraph 1. Detail B is never mentioned or implied.
3. (B) The author is not trying to convince you of anything, as a persuasive essay might do (choice A). The basic purpose here is to provide information on a topic.
4. (C) A summary cannot go beyond the information given in the passage, as summaries A, B, and D seem to do. Only summary C focuses on what is suggested by the passage.

5. (C) *Staphylococcus aureus* is ubiquitous in hospitals—it is found everywhere.
6. (D) Choice A is illogical, choice B is close but does not cover all of the information in the passage, and choice C is never suggested. The best overall statement about the passage is D.
7. (C) A statement of fact can be proved or checked. A statement of opinion is what someone thinks or believes. In this case, statements A, B, and D could be proved scientifically, but statement C is simply someone's belief.
8. (D) If a statement cannot be inferred by the reader, either there is not enough information to draw conclusions about it, or the passage contradicts the inference. The passage implies that MRSA is transmitted primarily by skin-to-skin contact—it is described as a “skin infection,” and while using someone's razor might put you at risk, buying used clothing that has been washed is unlikely to be hazardous.
9. (B) Canola oil is a source of unsaturated fat, but it is never mentioned in the passage.
10. (A) Think about other words you know that look like the word in question. To eat foods in moderation means to eat moderate, sensible amounts of those foods.
11. (A) Each choice has something to do with the passage, but only choice A covers the breadth of the topic as it is presented.
12. (D) Although the passage gives a lot of information, the author is mainly trying to convince the reader to eat a moderate amount of unsaturated fat and to consume little or no trans fat.
13. (A) Caloric density is never mentioned. The reader can conclude that unsaturated fat is healthier than saturated fat, making A the right choice.
14. (B) Choices A and C are minor details, and choice D is never suggested. The best choice is B.
15. (A) Look at the word in context. Ordinary diets don't give enough for seniors' needs; they need extra, or supplementation.
16. (D) The passage's tone is the attitude of the author toward the material being discussed. The author sticks to the facts in a serious manner,

resulting in a pragmatic, or practical, tone.

17. (C) Details A and B are found in paragraph 2, and detail D is found in the last paragraph. The author does not mention nitrates at all, and these compounds would be unlikely to be important for seniors or anyone else.
18. (B) Choice A is a stretch, choice C is even more of a stretch, and choice D is simply untrue, given the information in the final paragraph. The most logical conclusion is B.
19. (A) The word *should* is a clue that this is what someone thinks or believes. The other statements could be checked or proved.
20. (B) The paragraph discusses sleep duration—the amount of time that people sleep.
21. (C) Choices A, B, and D may be details, but choice C is the only statement that applies to every paragraph in the passage.
22. (D) Word choice can hint at the author’s attitude. In this case, *frightening*, *heavy price*, and *toxic mess* all suggest strong disapproval.
23. (B) If you conform to cultural ideals, you fit in with others in your culture.
24. (D) A quick skim of the passage should reveal that choices A, B, and C are mentioned, but D is not.
25. (A) The author ends with a statement that makes a plea to the reader. He wants to persuade the reader to be a careful consumer of cosmetics.
26. (D) Choice A appears in paragraph 2; choices B and C are in paragraph 3. Choice D is never suggested.
27. (B) Patients are dying from medical errors; the author suggests that they need someone to guard against this.
28. (B) The founder suggests in his quote that even cutting-edge hospitals can be dangerous, making choice B the best conclusion.
29. (D) A fact can be proved or checked, as the location of the organization could easily be.
30. (C) Choices B and D are minor details. Choice A is major, but the passage as a whole is about Lifewings, making choice C a better response.

31. (D) The passage seems to argue against choice A. A 33 percent improvement is not a cure of all pain, making B the wrong choice. NSAIDs are one treatment, but there is no comparison of their efficacy with acupuncture, so you cannot conclude choice C. The best choice is D.
32. (A) Acupuncture may now be considered a viable option, meaning that it is practicable, or reasonable.
33. (C) The mention of the study's conclusions in the last paragraph makes the overall tone one of optimism (choice C) rather than skepticism (choice B) or concern (choice A).
34. (C) The complete list of side effects appears in paragraph 2.
35. (B) What is the passage mostly about? It's about caffeine in coffee and its link to miscarriage. Choices A and D are too broad, and choice C is not part of the essay.
36. (B) One study is not enough to reverse, or invalidate, the guidelines—but more studies might do so.
37. (D) There is no support for choices A, B, or C, but the final paragraph of the passage certainly implies that doctors will select different options (choice D).
38. (D) Choices A, B, and C could be proved, but so far, choice D cannot. It remains a matter of opinion.
39. (D) Choice A is never mentioned, choices B and C are too narrow, and choice D comes close to covering the point of the passage—that PE is being aimed at life outside of school as well as in the classroom.
40. (A) *Propagandize* (choice B) and *demand* (choice C) have more negative connotations than the context requires, and *create* (choice D) does not fit at all. To instill is to fill with something, in this case, information. *Impart* (choice A) is a reasonable synonym.
41. (B) Basketball is mentioned, but not as a low-impact sport.
42. (B) Rereading the final paragraph of the passage should prove that choice B is the only logical option here.
43. (B) Choices A and C are details from the passage. Choice D could be a main idea of a different passage; this one never deals with the cost of dementia to families. The best choice is B.
44. (D) The onset of dementia is its beginning, or commencement.

45. (C) The author is not trying to get the reader to do or believe anything (choice A); he is merely giving information (choice C).
46. (D) Referring to dementia as “heartbreaking” indicates a sympathetic tone.
47. (B) The summary must include all of the main focuses of the passage, and in this case, only choice B fulfills that objective.

Vocabulary and General Knowledge

1. (A) From the same root as *delete*, which means “to blot out or destroy,” *deleterious* means “to injure.”
2. (B) To defer to someone is to show respect.
3. (C) To peruse is to examine in detail. You can peruse a book without taking notes on it (choice D).
4. (A) The word literally translates as “before knowing.” It has to do with predicting or forecasting.
5. (B) An upgrade is an improvement. Moving from serious to fair condition might be one example.
6. (B) *Concise* comes from a root that means “to cut.” Other words with this root include *precise*, *excise*, and *circumcise*.
7. (C) If you are accountable, you can account for your actions.
8. (B) *Tendere* means “to stretch,” as in *extend*. *Dis* means “apart,” as in *distant*.
9. (C) Something that is fluid (choice A) is liquid. Something that is molten (choice B) is hot and melted. Something that is malleable (choice D) is flexible. Only choice C is a synonym for *viscous*.
10. (C) The opposite of *overt* is *covert*, or hidden (choice B).
11. (D) A toxin is any poisonous compound.
12. (D) The word is from a root that means “sharp.”
13. (A) If results of tests are inconclusive, they do not imply a conclusion. The data are unsettled, or undecided.
14. (D) A boil is an inflamed, pus-filled swelling caused by local infection.
15. (C) Something that is asymmetric is not symmetrical; it is irregular, or uneven.
16. (C) *Counterfeit* literally translates as “to make in opposition.” A counterfeit watch is fake.

17. (A) *Effectiveness* and *efficacy* stem from the same root; both mean “the power to produce intended results.”
18. (D) The illegal operators are pretending to be licensed pharmacists.
19. (C) The large triangular muscle that raises the arm from the side is the deltoid, named for the Greek letter *delta*, which is triangular.
20. (C) Something ethereal is light and airy, like the ether, or upper regions of space.
21. (A) A lynx (choice B) is a wildcat; the pharynx (choice C) is part of the alimentary canal, and a phalanx (choice D) may be a bone in the fingers or toes.
22. (A) *Contour* means “to go around” and refers to the outline of an object.
23. (C) To be incorrigible is to be uncorrectable. It is often used to describe the behavior of rambunctious young children.
24. (C) To undergo is to go through, or experience.
25. (C) The ventral part of the body is that where the belly is located; *venter* means “belly.” In humans, that part is in front.
26. (D) *Anodyne* translates to “without pain.”
27. (C) Palliative care is care that lessens pain and gives comfort without actually curing.
28. (D) Although we tend to think of it as a type of material, in its adjectival form, *plastic* means “capable of being molded,” or “flexible.”
29. (A) To lie prone is to lie face down. Its opposite is *supine*, meaning “face up.”
30. (B) Euphoria is a strong feeling of well-being or ecstasy.
31. (C) The word *gonads* may refer to either male or female sex glands—either testes or ovaries.
32. (C) A deluge is a flood, or downpour.
33. (B) If a treatment is contraindicated, it is not indicated, or inadvisable.
34. (D) Ulcers may appear on the skin or on a mucous membrane, whether external or internal.
35. (D) To permeate is to spread throughout, or to infiltrate.
36. (B) If it is detrimental, it causes damage.

37. (B) *Censure*, from the same root as *censor*, refers to the expression of extreme disapproval.
38. (C) The DTs are a product of excessive drinking of alcohol. Characteristic signs include sweating, trembling, and hallucinating.
39. (C) Essentially “post burial” (*humus* means “ground”), a posthumous donation is made from the estate of someone who has died.
40. (A) The recording of vital signs is typical of hospital rounds or checkups. It is a way to indicate the efficient functioning of the body.
41. (D) *Belli*, as in *antebellum*, means “war.” Children who are bellicose exhibit warlike behavior.
42. (B) In a recall, the product in question is pulled from the shelves of retailers.
43. (C) Use the sentence context to choose the best definition.
44. (D) An audit is literally a hearing, but an audit check has nothing to do with the ears (choice C). It is an inspection, especially of financial records.
45. (B) HPV, or human papillomavirus, causes warts and lesions of the oral, genital, and anal mucous membranes.
46. (A) A volatile liquid is one that, due to its chemical instability, can easily explode, catch fire, or emit noxious gases.
47. (B) The root in *vivify* has to do with life, as in *revive* or *survival*. To vivify is to give life to, or animate.
48. (D) Truculence is fierceness and is often used to describe speech or writing.
49. (B) The best synonym for *counseling* is *advising*.
50. (A) The gingival margin is the edge of the gums.

Grammar

1. (C) A comma must appear between the introductory phrase *Having finished the exam early* and the independent clause *Rudy checked it over for errors*. No other commas are needed.
2. (B) The verbs in the sentence must be parallel.
3. (C) If there are four boys, the possessive noun that refers to them all must be *boys'*, with an apostrophe after the plural noun.

4. (C) Reading the choices aloud may help you determine which choice has a logical order of phrases and clauses. The least convoluted sentence is choice C.
5. (B) The word that means “at a previous time” is *formerly*, not *formally*.
6. (A) The correct pronoun must be a subject pronoun. Only choice A is a subject pronoun.
7. (B) The only possible pronoun that completes the sentence is a subject pronoun. It could be *she* or *he*.
8. (B) *Who’s* means “who is.” *Whose* means “belonging to whom.”
9. (D) Substitute the choices in the blank to find the one that makes sense in context.
10. (A) The sentence is missing an end mark, which must be a period in this case.
11. (C) From the Latin word *amator*, or lover, an amateur does something for the love of it, not for money.
12. (D) Again, reading this aloud and substituting choices should help you find the one that best fits.
13. (D) She probably complimented her counselor, or one who gave her counsel, rather than her councilor, or one who serves on a council.
14. (D) *Taken* is the verb form that goes with *having*.
15. (A) Ms. Schuster is the one tapping the beat, so the modifying phrase should be as close as possible to her name.
16. (B) The subject of the sentence is *one*, so the verb should be singular.
17. (C) The notes belong to the doctor and me; they belong to us. The correct possessive pronoun is *our*.
18. (A) The role of the clinic is principal, meaning “foremost,” not principle, meaning “rule.”
19. (D) Placing a semicolon between the two clauses (*Dr. Levine could not answer all of our questions and she promised to research the topic and return with a recommendation the next day*) makes the sentence correct.
20. (A) Although it derives from the same root as *machine* (choice D), the word *machine* is not in *mechanical*.

21. (B) Only the introductory clause requires a comma to separate it from the independent clause it precedes.
22. (B) If something is situated in the middle of two other things, it is between them.
23. (B) The past tense of *lead* is *led*, and that is the word that should be used here. A present-tense sentence might use the word *leads*; either correction would be permissible.
24. (C) The reflexive pronoun must correspond to the subject, *Mary Ann*. Only *herself* is appropriate in number and gender.
25. (A) If in doubt, read the sentences aloud and pick the one that is least convoluted.
26. (A) The car is not in the apartment house; the friends are. Moving the phrase *in the apartment house* to the end of the sentence would improve the logic of the sentence.
27. (C) Only the infinitive phrase works with the rest of the sentence.
28. (D) The verb form that goes with *had* is *eaten*, not *eat*.
29. (D) The action takes place tomorrow, and it takes place to Angela, not by Angela. Only choice D fits.
30. (B) Placing a comma after *freeway* separates the introductory adverbial phrase from the rest of the sentence.
31. (A) In this type of question, you must make sure that the tense of verbs remains consistent. Because *had* is past tense, the correct answer contains another past-tense verb, *spoke*.
32. (B) The boys leapt up *happily*, an adverb, not *happy*, an adjective.
33. (C) Because the pronouns follow the verb and receive the action, they must be object pronouns. That eliminates choices A and D. Grammatically, it is correct to name oneself last, making choice C the best answer.
34. (D) The wife did not collect her own belongings (choice A); she collected her husband's (choice D).
35. (A) The correct pronoun is the object of a preposition (*to*) and must therefore be an object pronoun.
36. (C) A comma is used correctly (choice B), and the sentence has an end mark (choice A). It is missing an apostrophe in *hospital's*.

37. (D) The word is related to *perceive*.
38. (C) *Everybody* is singular, so *pretends* is the correct verb. *Few* is plural, so the correct verb is *understand*.
39. (A) Notice that the first verb in the sentence is in the past tense, so it makes sense that the second verb would be, too.
40. (B) To infer is to deduce, or conclude. A person's grimace cannot do that. A grimace may, however, imply or indicate loathing.
41. (D) To be clear and correct, the phrase *with silver tires* should lie as close as possible to the word it modifies, *car*, and the phrase *parked behind the building* should clearly refer to the car with silver tires, not to the people seeing the car.
42. (B) The subject is *one*, which is singular. Therefore, the correct verb must agree with a singular subject. *Is completed* (choice D) is ungrammatical.
43. (B) A comma after *long* would separate the two independent clauses.
44. (B) This is a commonly misspelled word whose spelling must simply be memorized.
45. (D) *Nurses'* is a plural possessive noun that must be replaced by a plural possessive pronoun.
46. (A) The boy must be moving *stealthily*; *stealthy* is an adjective, not an adverb.
47. (D) Who was watching the TV news? Was it the criminals, or was it the person speaking? Only choice D places the modifying phrase next to the word it modifies.
48. (D) Look for the phrase that, if moved, would improve the sentence. The danger of drugs and alcohol is not limited to the auditorium; a better sentence would be "At a presentation in the auditorium, he informed us about the dangers of drugs and alcohol."
49. (B) The word *and* indicates addition. *Or* (choice A) indicates choice, and this is not a situation in which one or the other will do. *But* (choice C) and *yet* (choice D) indicate contrast, but both actions have to do with cleaning, so no contrast is indicated.
50. (C) Choice C contains all of the information in a logical order.

Basic Math Skills

1. (B) Express $2\frac{1}{8}$ as an improper fraction: $\frac{17}{8}$. Then multiply numerators and denominators: $\frac{2}{3} \times \frac{17}{8} = \frac{34}{24}$. Finally, express this as a mixed number in lowest terms: $1\frac{10}{24} = 1\frac{5}{12}$.
2. (B) Think: $0.80x = 24$. Solve: $x = 24 \div 0.80$. The answer is 30.
3. (D) Set this up as a proportion: $\frac{2}{5} = \frac{x}{145}$. You may cross-multiply to solve: $2 \times 145 = 5x$, $290 = 5x$, $x = \frac{290}{5}$, or 58.
4. (A) First, determine how much Stu spent for the cups:
 $\$.25 \times 6 = \1.50 . Then find out what he spent for the plates:
 $\$.75 \times 6 = \4.50 . Add those sums: $\$1.50 + \$4.50 = \$6.00$. Finally, subtract that total from \$10.00: $\$10.00 - \$6.00 = \$4.00$.
5. (D) 1.25 equals $1\frac{25}{100}$, or $1\frac{1}{4}$ in lowest terms.
6. (4,000) One liter = 1,000 milliliters, so 4 liters = 4,000 milliliters.
7. (A) 2,000 = MM, 7 = VII.
8. (C) Multiplying a numbers with two digits to the right of the decimal point by a number with one digit to the right of the decimal point should result in a product with three digits to the right of the decimal point. However, since the final digit is 0, you can state the product as 0.33 rather than 0.330.
9. (B) Multiplying two numbers with two digits to the right of the decimal point should result in a product with four digits to the right of the decimal point. However, in this case, the final digit, 0, is dropped off.
10. (25) You are asked to find the percentage of SUVs out of the whole number of vehicles, so first you must add to find the number of vehicles in all: $7 + 7 + 28 + 14 = 56$. 14 is $\frac{1}{4}$ of 56, so the percentage of SUVs is 25%.
11. (D) There are 5 stars in our Arabic or decimal system of numbers. In the binary system, that would be 101, where 1 = 1 four, 0 = 0 twos, and 1 = 1 one.
12. (30) The least common denominator is the least number into which both denominators divide. Finding the common multiples is the easiest way to find this number. Factors of 6 = 6, 12, 18, 24, 30, 36. Multiples of 15 = 15, 30, 45, 60, 75. The least multiple that both numbers have in common is 30.

13. (D) Military time starts with hours before noon. After noon, 1:00 p.m. is 1300, 2:00 p.m. is 1400, and so on.
14. (D) You must find the ratio that is equivalent to 6:16. 60:160 would be equivalent, making choice A incorrect. 72:192 would be equivalent, making choice B incorrect. 120:320 would be equivalent, making choice C incorrect. The answer is choice D: multiplying both sides of the original ratio by 35 gives you 210:560.
15. (B) Begin by expressing the mixed numbers as improper fractions: $3\frac{1}{2} = \frac{7}{2}$, and $1\frac{1}{10} = \frac{11}{10}$. To divide by a fraction, multiply by its reciprocal. Therefore, $\frac{7}{2} \div \frac{11}{10} = \frac{7}{2} \times \frac{10}{11}$. Now reduce to lowest terms: $\frac{70}{22} \div \frac{2}{2} = \frac{35}{11}$. Finally, express $\frac{35}{11}$ as a mixed number: $3\frac{2}{11}$.
16. (B) First, find $\frac{1}{3}$ of \$434.79 by dividing the total by 3—\$144.93. Subtract that from \$434.79 to find what Lenore has left after putting aside her share of the rent: $\$434.79 - \$144.93 = \$289.86$. Now subtract the amount she spends on groceries:
 $\$289.86 - \$75 = \$214.86$.
17. (94) $\$8.99 \times 6 = \53.94 . $\$3.99 \times 10 = \39.99 . Adding the two gives you $\$53.94 + \$39.99 = \$93.93$. Rounding that to the nearest dollar gives you \$94. Notice that in this case (although not in every case), rounding first before you multiply gives you the correct answer:
 $(\$9 \times 6) + (\$4 \times 10) = \$94$.
18. (A) Solve by dividing Clara's homes by the total and expressing the resulting decimal as a percent. $244 \div 1,525 = 0.16$.
19. (D) Since 1 inch equals 2.54 centimeters, 12 inches (1 foot) equals 2.54×12 , or 30.48 centimeters.
20. (C) If 1 inch is equivalent to 6 inches, 6 inches is equivalent to 36 inches, or 1 yard.
21. (C) You can eliminate choices A and B here just by rounding each added to the nearest one and estimating the answer.
22. (15) In other words, $0.80x = 12$. $\frac{12}{0.8} = 15$.
23. (B) First, find the lowest common denominator. $\frac{2}{15} \times \frac{4}{4} = \frac{8}{60}$.
 $\frac{1}{12} = \frac{5}{60} = \frac{5}{60}$. $\frac{8}{60} + \frac{5}{60} = \frac{13}{60}$.
24. (B) The paperbacks cost $\$.35 \times 5$, or \$1.75. The hardcover books cost $\$2.50 \times 3$, or \$7.50. Together, they cost $\$1.75 + \7.50 , or \$9.25.

Subtract that from \$10 to find the change: $\$10.00 - \$9.25 = \$0.75$.

25. (B) Military times greater than 1200 are times after noon.
26. (C) Don't get bogged down in the verbiage here; just do the math. A gross is 12 dozen. The farm sells 15×12 dozen eggs a week, or 180 dozen eggs, so 180 containers are needed.
27. (A) Multiply 90 by the decimal equivalent of 60%: $0.60 \times 90 = 54$.
28. (C) The calculation would look like this:

$$\begin{array}{r} 121 \text{ r}1 \\ 31 \overline{) 727} \\ \underline{6} \\ 12 \\ \underline{12} \\ 07 \\ \underline{6} \\ 1 \end{array}$$

29. (C) You need to multiply 15 minutes by the number of days in two weeks, 14: $15 \times 14 = 210$. 210 minutes is equal to 3 hours 30 minutes.
30. (B) Use the decimal equivalent: $0.35 \times 70 = 24.50$, or 24.5.
31. (C) Simply divide to find the decimal equivalent: $17 \div 5 = 3.4$. It should be clear from looking at the answer choices that only choice C makes sense.
32. (A) 1,000 milliliters = 1 liter, so 2,500 milliliters = 2.5 liters.
33. (B) Percentages are essentially ratios where the second number is 100. Divide 13 by 60 to find a decimal equivalent: $13 \div 60 = 0.2166666$, which rounds to 22%.
34. (C) If two cost 36 cents, one costs 18 cents, and 10 cost \$1.80. This should be easy enough to do in your head.
35. (1955) Reading from left to right, M = 1,000, CM = 900, L = 50, and V = 5, making the date 1955.
36. (D) You can do this algebraically or as a guess-and-check. Algebraically, Lulu = L, her sister = S, and their cousin = C. $L = S - 5$, and $S = C + 7$. Since $C = 15$, $S = 22$, and $L = 17$.
37. (C) Ordinarily, multiplying two numbers with two digits right of the decimal point would result in a product with four digits to the right of

- the decimal point. Here, however, the last digit, zero, is dropped off.
38. (B) Since you are multiplying a number with two digits after the decimal point by a number with one digit after the decimal point, the answer should have three digits after the decimal point.
39. (D) The formula is $C \times \frac{9}{5} + 32 = F$. $22 \times \frac{9}{5} + 32 = 71.6$.
40. (B) You can find the answer by setting up the easier of the two possible proportions: $\frac{1}{50} = \frac{10}{x}$, so $x = 500$ cm. Since $500 \text{ cm} = 5 \text{ m}$, you should be able to rule out all of the choices but choice B.
41. (B) If they replace 14 in 7 hours, they work at a rate of about 2 per hour. They can do 120 in 60 hours, or two 30-hour weeks.
42. (C) The answer will be very close to 4.5 divided by 1, so the most reasonable answer (without computation) is choice C.
43. (C) Find the least common denominator and subtract: $\frac{8}{20} - \frac{5}{20} = \frac{3}{20}$.
44. (D) Think of this as a proportion: 1 hour/80 miles = x hours/140 miles. Cross-multiply to solve: $140 = 80x$; $x = \frac{140}{80}$, or 1.75 hours, which equals 1 hour 45 minutes.
45. (D) Express each mixed number as an improper fraction: $2\frac{1}{4} - 2\frac{3}{6}$. Then find the lowest common denominator and restate those fractions: $\frac{126}{24} - \frac{92}{24}$. Solve, and express as a mixed number in lowest terms: $\frac{34}{24} = 1\frac{10}{24} = 1\frac{5}{12}$.
46. (D) There are two simple ways to do this: divide 9 by 25, or recognize without computing that $\frac{9}{25} = \frac{36}{100}$.
47. (300) In other words, $0.35x = 105$. $105 \div 0.35 = 300$.
48. (C) Find 3% of \$36,055 and add that to Wallace's salary. $0.03 \times \$36,055 = \$1,081.65$. $\$36,055 + \$1,081.65 = \$37,136.65$.
49. (2) The key here is that everyone is retaining his or her job, so you are adding to the total. You can do this by guessing and checking. Right now, there are $\frac{5}{25}$ male nurses, or 20% of the nursing staff. If you add just 1 more male nurse, the total will be $\frac{6}{26}$ male nurses, or 23% of the nursing staff. Adding another brings you to $\frac{7}{27}$ male nurses or just more than 25% of the nursing staff. So adding a minimum of 2 staffers would solve your diversity problem—as long as both were male.
50. (D) There are 8 ounces in a cup and 32 ounces in 4 cups.

Biology

1. (A) The mitochondrion is the organelle found in eukaryotes that supplies most of the cell's energy by manufacturing ATP.
2. (B) ATP energizes glucose so that it can be broken down, and then the glucose molecules in the cytoplasm of the cell split in half, with each half of the six-carbon glucose becoming a three-carbon substance called pyruvic acid, releasing energy in the process in the form of ATP.
3. (D) Mitosis is cell division that produces new cells with the same number of chromosomes as the original cell. Meiosis (choice A) is the type of cell division that produces cells with half of the organism's normal chromosome number.
4. (A) RNA is ribonucleic acid; its sugar is ribose. DNA is deoxyribonucleic acid; its sugar is deoxyribose.
5. (B) If the disease is carried on the dominant allele, only the *aa* combination of recessive genes represents a disease-free offspring. On a Punnett square, that would be one out of four offspring.
6. (C) If cells are placed in a very salty solution, water molecules can diffuse across the cell membrane to move from an area of greater concentration of water molecules (inside the cells) to an area with a lesser concentration of water molecules (the solution of salt water).
7. (A) Unlike many creatures, grasshoppers and other insects have a system in which blood circulates through blood vessels that open into spaces between their body organs. Carbon dioxide and oxygen are not exchanged through the blood but instead pass between the cells and the outside of the grasshopper through the tracheas and spiracles.
8. (B) Enzymes are catalysts that speed up reactions. They do this by lowering the amount of energy needed to begin the reaction.
9. (B) The pistil is the female reproductive organ in a flowering plant.
10. (A) Mutualism is the form of symbiosis through which both species receive mutual benefit.
11. (A) The taxonomic categories in order from least to most specific are: kingdom, phylum, class, order, family, genus, species.
12. (B) Carbohydrates and lipids are made up of different combinations of carbon, hydrogen, and oxygen. Proteins are made up of amino acids, which center around carbon atoms and always contain hydrogen and

oxygen plus nitrogen. Nucleic acids contain carbon, hydrogen, and oxygen in their simple sugars plus nitrogen and phosphates.

13. (A) Monerans are prokaryotic, and they do not have vacuoles, centrioles, mitochondria, lysosomes, endoplasmic reticula, nuclear membranes, or Golgi apparatuses.
14. (C) During budding, a cell or cells in the parent's body produce a smaller version of the parent called a bud. All buds have the exact DNA of the parent. Yeast, hydras, and some plants use this form of asexual reproduction.
15. (A) Anaphase is the second step in mitosis. At this stage, the chromatids pull apart and move toward the centrioles at opposite sides of the cell. Once separated, they are called chromosomes. As anaphase ends, a complete set of chromosomes is at each end of the spindle.
16. (D) DNA is composed of deoxyribose, a simple sugar; nitrogen bases; and a phosphate group.
17. (A) Picture a Punnett square. Reading the chart clockwise from top left, the cross would yield one female carrier, one female hemophiliac, one male hemophiliac, and one normal male who neither carries nor manifests the disease.
18. (C) The Krebs, or citric acid cycle, is the third step in carbohydrate catabolism, the breakdown of sugar. Before it begins, glucose has been broken down via glycolysis into pyruvic acid. In the Krebs cycle, pyruvic acid breaks down into carbon dioxide, releasing two ATPs and 10 NADHs.
19. (D) The more measurements made, the more valid the data are likely to be. Using three sites rather than one allows the researcher to increase observations.
20. (A) The greatest energy content is at the base of the energy pyramid; therefore, producers > primary consumers > secondary consumers > decomposers. An herbivore would be a primary consumer; carnivores and omnivores are more likely to be secondary consumers.
21. (C) This choice reduces the possibility that one brand might emit more radiation than another; it also allows for a before-and-after measurement that is parallel for each test.

22. (C) In the carbon cycle, carbon passes from the environment through the bodies of living organisms and back into the environment. The dead bodies of organisms are broken down by bacteria and other decomposers, which produce carbon dioxide and release it into the environment.
23. (A) Of the colors listed, the one best absorbed by chlorophyll is blue. Fluorescent grow lights produce a good deal of blue light.
24. (D) Most bacteria are spherical (choice D), rod-shaped (choice B), or spiral-shaped (choice C).
25. (A) In hydrolysis, any class of compound is broken down into subunits through the addition of water.

Chemistry

1. (D) The ionization energy of an atom is the energy required to remove the outermost electron from the atom. This energy is needed to overcome the attraction between the positively charged protons and the negatively charged electrons.
2. (A) Phenolphthalein is a common indicator used to determine the pH of a substance. In the presence of an acid, it will be colorless. In the presence of a base, it will turn magenta.
3. (C) For a substance to decay from 56 kg to 7 kg it must undergo 3 half-lives ($56 \rightarrow 28 \rightarrow 14 \rightarrow 7$). If the half-life of the substance is 12 days, then three half-lives would be 36 days.
4. (D) If the elements in a covalent bond have different electronegativity values, the unequal sharing of electrons causes the bond to be polar. H_2O is the only choice with a polar covalent bond.
5. (B) This type of equation represents decomposition, the breaking down of a compound into its component parts.
6. (C) Sulfur is located on the upper right side of the periodic table. It is soft, lacks luster, and does not conduct heat or electricity well, making it a nonmetal.
7. (B) A gas with a greater mass effuses less rapidly than a gas with a lesser mass. Therefore, the gas with less mass would be smelled sooner. Since both gases are odorous, and both do effuse eventually, choices C and D are incorrect.

8. (C) White phosphorus is made by condensing phosphorus vapor. Red phosphorus is made by heating white phosphorus in a vacuum to around 250°C. Black phosphorus is less common and is made by subjecting phosphorus to extreme pressure or by crystallizing white phosphorus.
9. (B) Substances that are gases at room temperature and pressure decrease in solubility with an increase in temperature. Substances that are solids at room temperature and pressure increase in solubility with an increase in temperature.
10. (B) The compound has four carbon atoms joined by single bonds, making it a molecule of butane.
11. (D) In the original equation, there is one atom of iron (Fe) on the left side and two on the right, so the coefficient 2 is needed to balance iron. Before you limit your choices to A and C, look at the oxygen. There are two atoms of oxygen on the left and three on the right. The only way to balance this is by placing a 3 as a coefficient on the left and 2 as a coefficient on the right. That brings the atoms of iron up to four on the right, so a coefficient of 4 on the left is needed to balance.
12. (D) Reactivity has to do with the tendency of an element to lose electrons. The least reactive elements are the noble gases, and in general, reactivity increases across the periodic table from left to right. Since magnesium and barium are in the same column of the table, they are similar in reactivity.
13. (B) In a single bond, one pair of electrons are shared. In a double bond, two pairs of electrons are shared (choice D).
14. (C) Calculate the number of neutrons by subtracting the atomic number from the mass number. The mass number of carbon-12 is 12, and the atomic number for carbon is 6, so $12 - 6 = 6$.
15. (C) The electron distribution of an atom is divided into shells, which in turn contain subshells composed of the orbitals in which the electrons reside. In electron configuration, the symbols 1s, 2s, 2p, and so on, are used to designate subshells, with superscripts indicating the number of electrons in each subshell. There is a maximum number of electrons per subshell. Magnesium has atomic number 12, meaning that it has 12 protons, and in its balanced state, 12 electrons. Looking at the

superscripts alone should tell you that only the superscripts in choice C add up to 12.

16. (A) You need simply to divide the number of moles by the number of liters to determine the molarity: $0.45/4 = 0.1125$, which rounds to 0.11.
17. (C) Tap water is relatively neutral and could be expected to fall in that neutral range.
18. (C) A mole of atoms consists of Avogadro's number of atoms and has a mass in grams numerically equal to the atomic weight of the element. So, one mole of salt, NaCl, has a mass in grams equal to the atomic weight of one atom of sodium plus one atom of chlorine—about 23 + 35, or 58 g.
19. (A) Alpha particles are ejected from a radioactive substance at about 16,000 km/sec. Beta rays (choice B) are streams of electrons that travel faster, at around 130,000 km/sec.
20. (A) Zn is zinc, and SO_4 is a sulfate. ZnS would be zinc sulfide (choice B). ZnO would be zinc oxide (choice D).
21. (A) With a few rare exceptions, oxygen has an oxidation number of -2 in a compound.
22. (B) Weak intermolecular forces have a low boiling point. Strong intermolecular forces have a high boiling point.

London dispersion < dipole-dipole < H-bonding < ion-ion

London dispersion is the weakest force of those shown. (A Keesom interaction is one form of dipole-dipole interaction.)

23. (C) You can use the molarity/dilution equation to solve this.

$$M_1V_1 = M_2V_2$$

$$3 \times 500 = 12 \times x$$

$$1,500 = 12x$$

$$x = 125$$

24. (B) Potassium is K, and chlorine is Cl. Putting them together forms potassium chloride. A chloride is simply a compound of chlorine with another element.

25. (A) Gold (Au) has an atomic mass of 196.96655 amu. Barium (Ba) has an atomic mass of 137.327 amu. Iodine (I) has an atomic mass of 126.90447 amu. Tungsten (W) has an atomic mass of 183.84 amu.

Anatomy and Physiology

1. (C) Something that is lateral is toward the outer side of the body. The side of the right knee farthest from the left knee would fit this description.
2. (D) The alveoli are the tiny air sacs in the lungs where the exchange of oxygen and carbon dioxide takes place.
3. (C) The ribs themselves protect the lungs (choice A), but the intercostals are muscles that expand and contract the chest, allowing it to draw in and expel air.
4. (D) The esophagus connects the stomach and the oral cavity in the human digestive system.
5. (B) The height of calorie intake for healthy, active people is approximately their mid-20s. After that, calorie intake should decline slightly as energy needs decline.
6. (A) The corpus callosum is a broad band of nerve fibers that join the two hemispheres of the brain.
7. (C) The integumentary system includes the skin, hair, nails, and assorted glands. Receptors embedded in the skin receive information regarding heat, pain, air flow, and so on, which is transported through the nervous system to the brain.
8. (C) The two valves connect the heart to the pulmonary artery and the aorta, which carry blood from the heart to the rest of the body.
9. (D) Narrowing of the valves means that blood moves with difficulty out of the heart. Results may include chest pain, edema in the feet or ankles, and irregular heartbeat.
10. (B) At birth we have 44 separate bony structures in our skulls, but many of those fuse as we age.
11. (D) The arteries carry blood away from the heart as a key feature of the cardiovascular system.
12. (C) Tears (choice A), urine (choice B), and mucus (choice D) are all primary lines of defense, because they work to prevent infection.

Inflammation (choice C) is an example of a secondary line of defense, because it kicks in once the body has been infected.

13. (A) Bone tissue stores a variety of minerals, from calcium to phosphorus, releasing them into the bloodstream as needed.
14. (A) Deoxygenated blood first enters the heart via the right atrium.
15. (A) Thiamine (B_1) deficiency is often found in people whose diet consists largely of polished white rice; in refining the rice, the thiamine-rich husk is removed. Beriberi may affect several systems in the body and may lead to paralysis or death.
16. (D) The hormones produced by the endocrine system are critical in sexual development and reproduction.
17. (A) Oxytocin (choice B) facilitates birth and breast-feeding. Cortisol (choice C) increases blood sugar and controls some aspects of fat breakdown. Aldosterone (choice D) controls reabsorption of ions and regulates blood pressure. Serotonin (choice A) is a neurotransmitter found in the gut that regulates appetite and sleep as well as some aspects of mood.
18. (D) The occipital lobe is farthest back in the skull, posterior to the other parts of the brain.
19. (D) HDL (“good”) cholesterol levels in healthy adults range from around 40 to 120 mg/dL, with the mean being a bit over 53. Smoking, obesity, and a sedentary lifestyle may lead to lower HDL. A level of 40 would indicate the need for regular monitoring.
20. (B) A transverse section is a cross section.
21. (A) Amylase is present in saliva, where it begins to break down starch into sugar.
22. (C) The spleen uses lymphocytes and macrophages to filter out bacteria, dead tissue, and foreign matter.
23. (D) Although iron is vital for red blood formation, copper is important for proper iron metabolism. A copper deficiency can quickly lead to anemia.
24. (C) The dorsal body cavity contains the spinal column, making it posterior, or toward the back of the body, compared to the ventral body cavity, which contains the structures of the chest and abdomen.

25. (B) The integumentary system (the skin and its appendages) waterproofs the body from outside and guards against excess fluid loss from inside.

Physics

1. (A) The mass remains the same, at 1 kg. Because the volume is now halved, the density (mass/volume) is doubled.
2. (D) The plane traveled a total of 1,000 miles, but because it ended back where it started, the displacement is 0.
3. (B) Kinetic energy is the energy of an object in motion. The greater the mass of that object, the greater its kinetic energy.
4. (C) The velocity of the car is equal to the time multiplied by the acceleration.
5. (D) An impulse is a change in momentum. The 10-kg object had a change in its velocity of 10 m/s. Using the equation $\Delta p = m\Delta v$, change in momentum equals mass times change in velocity, you can see that the answer is 100 kg·m/s.
6. (C) Increasing the temperature of a substance increases its volume and decreases its density. Such changes are far more evident in gases than in liquids or solids.
7. (D) Work is the force that is applied to an object over a distance: $W = Fd$. The force is 15 N, and the distance is 3 m, giving a total amount of work equal to 45 N·m.
8. (D) Based on the equation $P = IV$, the current is P/V , or power divided by voltage. Dividing 1,525 watts by 110 volts gives you approximately 13.9 amperes.
9. (A) The velocity of a wave is determined by multiplying its frequency by its wavelength.
10. (A) The box had potential energy when it was balanced at the edge of the table—it could move toward the floor. Once the box hit the floor, it had no potential energy—and when it came to rest, it had no kinetic energy.
11. (C) Exothermic reactions are characterized by negative heat flow, because heat is lost into the environment. Exothermic reactions usually

proceed from a higher-energy, less stable reactant to a lower-energy, more stable product.

12. (C) The vibrations in longitudinal waves move in the same direction as the wave.
13. (A) Only choice A has both direction and magnitude, making it a vector.
14. (D) Fresh water has a density of around $1,000 \text{ kg/m}^3$, whereas that of salt water is around $1,030 \text{ kg/m}^3$. The difference in density of the fluids makes objects in salt water more buoyant than those in fresh water.
15. (D) If the mass of each object is doubled, the force of attraction is quadrupled.
16. (D) Attaching batteries in a series gives you a voltage equivalent to the combined voltage of all the batteries.
17. (B) Newton's second law of motion states that the greater the force applied to an object, the greater is its acceleration.
18. (A) Look at the relationship between the object distance (d_o), the image distance (d_i), and the focal length (f). Use the equation: $\frac{1}{f} = \frac{1}{d_o} + \frac{1}{d_i}$ where $f = 10 \text{ cm}$ and $d_o = 20 \text{ cm}$.

$$\frac{1}{10} = \frac{1}{20} + \frac{1}{d_i}$$

The image distance is 20 cm.

19. (D) Speed equals wavelength times frequency ($v = f\lambda$). In this problem, $12 = 3.2\lambda$, so $\lambda = 3.75 \text{ Hz}$.
20. (B) Momentum is the product of velocity and mass, and the greatest product of the four presented here is $48,000 \text{ kg}\cdot\text{m/s}$.
21. (C) Using this formula, energy is often measured in kilowatt-hours. For example, if you use a 100-watt light bulb 12 hours a day for 30 days, you will have used 100×360 watt-hours, or 36 kilowatt-hours.
22. (B) Force equals the extension of the spring times a constant ($F = dk$). If a force of 12 kg stretches this particular spring 3 cm, the constant is 4. Apply that same constant to the increased force: $30 = d \times 4$. The distance of the extension must be $30 \div 4$, or 7.5 cm.

23. (C) Acceleration equals the speed squared divided by the radius ($a = v^2/R$). In this case, $a = 4 \text{ m/s}^2$ and $v = 10 \text{ m/s}$, so the radius must be $100 \div 4$, or 25 m. The mass of the car is irrelevant to the problem.
24. (B) According to Ohm's law, current (I) equals voltage (ΔV) divided by resistance (R), or $I = \Delta V/R$. In this case, you know voltage and resistance, so $I = 100/10$, or 10 amp.
25. (B) Use Coulomb's law to find the force. The equation to use is this:

$$\frac{F_{\text{elect}} = k \times Q_1 \times Q_2}{d^2}$$

Remember that 1 coulomb = 10^6 microcoulombs. Q_1 this case equals $4 \times 10^{-6} \text{ C}$, Q_2 equals $2 \times 10^{-6} \text{ C}$ and d , distance, = 1 m. Now, you must recall Coulomb's constant, $k = (9.0 \times 10^9 \text{ N}\cdot\text{m}^2/\text{C}^2)$. Once more, it's all about computation:

$$\frac{\frac{9.0 \times 10^9 \text{ N}\cdot\text{m}^2}{\text{C}^2} \times (4 \times 10^{-6} \text{ C}) \times (2 \times 10^{-6} \text{ C})}{(1 \text{ m})^2} = \frac{72 \times 10^{-3}}{1} = 0.072 \text{ N}$$

CHAPTER 5

A2 Practice Test 3

READING COMPREHENSION

47 items

Suggested time: 60 minutes

Boys Will Be Boys

One of the most common stereotypes surrounding young teenage boys is that they are hostile, belligerent, and generally display “attitude.” Some considered this just a phase in the maturing process, some thought it was a reflection of poor parenting skills, and others placed blame on everything from violent video games to too much television.

A recent study by a team of Australian and American researchers may prove all of those theories wrong. These researchers say that boys’ aggressive behaviors may actually be due to overly large amygdalae in the boys’ brains.

The amygdala is a part of the brain found deep within the medial temporal lobes. It is intricately involved in emotional responses such as fear and anger. As the researchers reported in an article for the *Proceedings of the National Academy of Science*, boys may show no ability to control their emotions because they literally do not have the brain development to do so until their early twenties.

The study required 137 twelve-year-old boys and their parents to sit down and discuss emotionally sensitive issues such as homework, bedtime, and hours spent on the Internet. Afterward, the boys’ brains were scanned. The boys who had the largest amygdalae behaved more aggressively than boys who had smaller ones. They also appeared to have smaller-than-usual prefrontal cortexes, the region of the brain that is involved with regulating emotions.

The researchers concluded that those boys who had less brain development—less development of critical connections among parts of the brain—had a much stronger tendency to be negative and even hostile when they interacted with their parents. Just do not tell the teenage boys—it gives them a built-in excuse!

1. What is the main idea of the passage?

- A. How best to discipline unruly young people
- B. Why scientists think that the amygdala affects emotions
- C. How behavior may be linked to brain development
- D. Why parents and teenage boys tend to have disagreements

2. Which of the following is *not* listed as a detail in the passage?

- A. The location of the amygdala
- B. The number of boys in the study
- C. The size of the boys' amygdalae
- D. The homeland of the researchers

3. What is the author's primary purpose in writing this essay?

- A. To inform
- B. To persuade
- C. To entertain
- D. To analyze

4. Choose the best summary of the passage.

- A. By looking at teenage boys' reactions to violent videos, researchers were able to establish that brain development is related to aggressive behavior. The boys who behaved most aggressively had the least developed prefrontal cortexes.
- B. Researchers studying aggressive responses in young boys determined that the amygdalae of aggressive boys were larger than those in other boys. Their lack of brain development may inhibit them from controlling their emotions.

- C. Boys in Australia are known to be less aggressive than boys in the United States, and researchers suspect that this is because of an excess of violent video games and television. Now it appears that a little-understood part of the brain may be to blame.
- D. While studying the effect of certain aggressive behaviors on young boys, researchers on two continents accidentally located the part of the brain that controls aggressive response and regulates emotions. The next step is to study this in girls as well.

Using Light to Heal

Phototherapy, commonly referred to as light therapy, has been an established form of medicine for more than a century. In recent years it has become closely associated with seasonal affective disorder, of which it is an effective and well-known treatment, but it is also used to treat a broad range of medical issues including acne, psoriasis, and eczema.

The most common form of light therapy involves a patient sitting in front of a medically designed light box for a prescribed amount of time every morning. The light is positioned at an exact distance from the patient's eyes so that it strikes both the skin and the retina. The light box mimics the effects of natural sunlight, but the UV rays are filtered to ensure there is no damage to the patient's skin or eyes. Phototherapy is thought to be a safe method of reducing the amount of bacteria on the skin, reducing inflammatory responses, and affecting the chemicals in the brain associated with mood.

One of the most recent technologies to be associated with phototherapy is the phototherapy blanket. In the late 1960s it was discovered that phototherapy can be used to treat jaundice in newborn babies. Neonatal jaundice, a yellowing of the skin in newborn infants due to excess bilirubin levels in the blood, is usually harmless but can cause brain damage if left untreated. Newborns are given a phototherapy blanket, a small pad with flexible LED light panels sewn into the fabric, to sleep with until their livers are able to process the excess bilirubin.

The many benefits of phototherapy make it a valuable resource for addressing a variety of ailments. Emerging innovations in LED and photo

technologies ensure that many more practical applications will be developed for this particular form of treatment in the years to come.

5. What is the meaning of the word *established* as used in the first paragraph?
 - A. Created
 - B. Ascertained
 - C. Founded
 - D. Reputable
6. What is the main idea of the passage?
 - A. Phototherapy has been an established form of medicine for more than a century.
 - B. Phototherapy is a safe method of reducing the amount of bacteria on a person's skin.
 - C. The many benefits of phototherapy make it a valuable resource for addressing a variety of ailments.
 - D. Emerging innovations in LED and photo technologies ensure that many more practical applications will be developed for phototherapy in the years to come.
7. Which of the following statements is a fact?
 - A. Nurses should watch for jaundice in newborns.
 - B. Untreated jaundice may cause brain damage.
 - C. Phototherapy blankets are a valuable invention.
 - D. Avoid neonatal units that lack phototherapy.
8. Which statement would *not* be inferred by the reader?
 - A. Some forms of phototherapy have been around for decades.
 - B. New applications of phototherapy continue to be developed.
 - C. Phototherapy is most often used to treat skin problems.
 - D. Ultraviolet rays can cause damage to eyes and skin.

Risks of Spanking

Put a dozen parents together in a room, and you will most likely have a dozen different theories of parenting. One of the most debated issues in raising kids is how to discipline them, especially when it comes to the question of to spank or not to spank. Some moms and dads are sure that it is an integral part of showing their kids what is right and wrong. Others are equally sure that spanking is a cruel act of violence against kids. Which is it?

According to a new study reported at the American Psychological Association Summit Conference on Violence and Abuse in Relationships, spanking or other forms of corporal punishment apparently increase the risk of future sexual problems such as violent or coercive sex with partners. “The more children are spanked, the more aggressive they are and the more likely they are to engage in delinquent or at-risk behaviors,” says Elizabeth Gershoff from the University of Michigan’s School of Social Work. “Kids may learn that sometimes there’s pain and fear involved in loving relationships.”

Naturally, there are those who disagree as well. Some scientists believe that spanking two- to six-year-old children can be very helpful as long as parents are not angry or out of control emotionally. Human development researcher Robert Larzelere adds that parents simply must be able to differentiate between appropriate and inappropriate use.

Although opinion on spanking remains divided, research continues on this contentious issue. In the meantime, however, the American Academy of Pediatrics advises parents to use other methods of discipline.

9. Which is *not* mentioned as a possible result of being spanked in childhood?
- A. Aggression
 - B. Coercive sex
 - C. Delinquency
 - D. Incontinence
10. What does the word *integral* mean as used in the first paragraph of the passage?

- A. Central
- B. Initial
- C. Trifling
- D. Irrelevant

11. Choose the best summary of the passage.

- A. Although some parents believe firmly in spanking, others disagree. Researchers continue to study both the perpetrators and the recipients of regular spankings, but they have found little to corroborate either side of the argument.
- B. Is spanking a cruel act of violence, or is it a necessary form of discipline? A nationwide study reviewed the use of spanking in different cultures and determined that violent aggressors were frequently those who had been spanked in their youth.
- C. A new study on spanking indicates that being a recipient of multiple spankings can result in sexual problems later in life as well as other troublesome behaviors. Nevertheless, there remains no solid agreement on whether spanking is always bad.
- D. Whether or not you choose to use spanking as a form of discipline in your household, you should be aware of the negative effects it has on certain children later in life, and you should use it sparingly and with control.

12. What is the author's primary purpose in writing this essay?

- A. To reflect
- B. To persuade
- C. To inform
- D. To entertain

13. Which statement would *not* be inferred by the reader?

- A. Most criminals were victims of childhood abuse.
- B. Aggression may have roots in childhood discipline.
- C. Parents disagree over the use of spanking.
- D. Researchers disagree over the value of spanking.

Forty Winks

When most people think about taking a nap, they typically envision being down for the count for at least an hour or two. A German study, however, has shown that if you really want to refresh your brain, a six-minute catnap will do it. Not only will you feel better afterward, but your ability to learn and remember will have improved as well.

As described in a recent article in the *Journal of Sleep Research*, students at the University of Dusseldorf participated in experiments in which they had to memorize a list of words and then either take a nap or play a video game. The ones who napped scored consistently higher than those who stayed awake.

The study may help scientists learn more about what happens when people go to sleep. They already know that the brain undergoes a number of significant changes in the process. “There are dramatic shifts in brain chemistry and electrophysiology,” said Dr. Matthew Tucker, researcher at Harvard University School of Medicine and the Center for Sleep and Cognition. “For example, we know that levels of the transmitter acetylcholine go down. And we think that when acetylcholine gets to a low point, it should have an enhancing effect on memory.”

Experts believe that sleeping is the brain’s chance to decide which details and memories from the day need to be placed in permanent storage and which ones need to be thrown out. It has to do this because there is only so much room in the brain for information.

Of course, those catnaps may be wonderful, but they can never replace the value of a solid eight hours of sleep. As Dr. Olaf Lahl, the study’s lead author, remarks, “A regular sleep schedule still plays an important role in overall well-being and health.”

14. What is the main idea of the passage?

- A. Everyone has to have eight hours of sleep each night.
- B. Brief naps are enough to help energize most people.
- C. There is a limited amount of room in the brain for storage.
- D. Memorizing lists of words is more difficult than you’d think.

15. What is the meaning of the word *shifts* as used in the third paragraph?

- A. Alterations
 - B. Stints
 - C. Removals
 - D. Transfers
16. Identify the overall tone of the essay.
- A. Impersonal
 - B. Instructive
 - C. Disgusted
 - D. Disbelieving
17. Sleeping apparently helps with everything EXCEPT _____.
- A. fatigue
 - B. memory
 - C. learning
 - D. appetite

Get Off the Couch!

It sounds contradictory, but here is some new advice for people who are feeling unusually tired: get out and get some exercise. Studies have shown that regular, low-impact workouts such as short strolls or brief bike rides can help increase overall energy levels by 20 percent and decrease fatigue levels by 65 percent. In other words, if you are feeling tired, the best way to feel more energetic is to get some exercise.

This advice is based on a study done by the University of Georgia's Exercise Pathology Lab. Three dozen people who did not get any kind of regular exercise yet consistently felt exhausted were divided into three groups. One group did not exercise at all. A second group worked out intensively on an exercise bike three times a week. The third group also worked out but at a slower pace. Of the two groups that exercised, both reported a 20 percent increase in energy levels. However, the group that exercised at a more leisurely pace stated that they experienced far less fatigue than the high-intensity group.

This was not the first study to point out a link between regular exercise and energy levels. The same team that conducted it also published one several years ago that stated that low-impact exercise can also help reduce fatigue in patients with serious health conditions such as heart disease and cancer. Clearly, it is time to get off the couch and onto the track.

18. Which statement could be inferred from the passage?
- A. The Georgia lab had done a previous study on the connection between exercise and energy.
 - B. Exercise regimes are not recommended for patients with serious health problems.
 - C. An increase in energy levels always corresponds directly to a reduction in fatigue.
 - D. There were fewer than 10 participants in each group in the Georgia study.
19. Which of the following statements is an opinion?
- A. The laboratory in Georgia studied 36 subjects.
 - B. One group worked out on an exercise bike.
 - C. Low-impact exercise can increase energy levels.
 - D. Fatigued people need to get out and exercise.
20. The word *track* as used in the last paragraph of the passage can best be defined as _____.
- A. keep a record of
 - B. a new attitude
 - C. follow carefully
 - D. a paved, circular path
21. What is the main idea of the passage?
- A. Low-impact exercise is always better for people than intensive exercise.
 - B. The best way to address fatigue is to get out and exercise hard every single day.

- C. If people feel tired, they can best improve their energy levels by regular exercise.
- D. Low-impact exercise helps people with serious conditions such as heart disease and cancer.

Obsession Plus Addiction

It is hard to imagine how the eating disorders anorexia and bulimia could be any worse than they already are, but somehow people have found a way. Known unofficially as *drunkorexia*, this condition is a blend of self-imposed starvation or bingeing and purging mixed with alcohol abuse. Anorexics may use alcohol either to soothe their conscience for eating something they feel they should not, or as their only sustenance. Bulimics binge on alcohol for emotional reasons and then purge by vomiting it back up.

Our current culture's obsession with thinness, coupled with widespread acceptance of drug and alcohol abuse, have made this combination particularly attractive. Dr. Doug Bunnell, former president of the National Eating Disorders Association, said, "Binge drinking is almost cool and hip, and losing weight and being thin is a cultural imperative for young women in America. Mixing both is not surprising, and it has reached a tipping point in terms of public awareness."

Some experts are beginning to explore the possible psychological and neurological links between eating disorders and substance abuse. Does eating or bingeing somehow trigger the same pleasure centers as drugs or alcohol? Another avenue being explored is what to do if a person has both conditions.

Treatment for addiction is abstinence, but no one can abstain completely from food. As Dr. Kevin Wandler, vice president for medical services at an eating disorders center, phrases it, "Eating normally would be an effective behavior, but it's easier to give up alcohol and drugs because you never need them again. If your drug is food, that's a challenge."

22. Identify the overall tone of the essay.

- A. Dismayed

- B. Fascinated
 - C. Reassured
 - D. Suspicious
23. What is the meaning of the word *abstain* as used in the last paragraph?
- A. Dishonor
 - B. Go without
 - C. Connect to
 - D. Liberate
24. Which of the following is *not* listed as a detail in the passage?
- A. Anorexics' use of alcohol as sustenance
 - B. Bulimics' use of alcohol for emotional reasons
 - C. Cultural reasons for drunkorexia
 - D. Medical cures for drunkorexia
25. What is the author's primary purpose in writing this essay?
- A. To inform
 - B. To persuade
 - C. To entertain
 - D. To analyze

Sleep Loss

The Centers for Disease Control and Prevention (CDC) is always busy monitoring health issues and sending out regular warnings to make sure people know of any impending threats. One of the most recent warnings, however, caught Americans by surprise. The CDC announced that one of today's most underrecognized public health problems is sleep loss. It is estimated that between 50 and 70 million Americans suffer from this problem.

Adequate sleep is essential to good mental and physical health. If you do not get enough sleep on a regular basis, you run an increased risk of obesity, diabetes, high blood pressure, stroke, cardiovascular disease,

depression, cigarette smoking, and excessive drinking. Those are not minor health issues!

To find out how many Americans are not getting enough sleep, the CDC surveyed almost 20,000 adults in four states. Ten percent of the people studied reported not getting enough sleep every single day of the previous month, and 38 percent reported not getting enough in seven or more days in the previous month.

How much sleep is enough sleep? According to the National Sleep Foundation, adults need 7 to 9 hours each night, whereas children under 12 need 9 to 11 hours and teenagers need between 8½ and 9½ hours. Unfortunately, instead of sleeping, many people stay up late at night to surf the Internet or watch television.

Along with the health risks that chronic sleep loss can bring, experts also believe it is responsible for thousands of people who die on the road each year from accidents caused by sleepy drivers. There is no doubt that spending less time with eyes closed can make your days longer, your health worse, and your driving riskier.

26. All of the following are mentioned in the passage as potential risks from inadequate sleep EXCEPT _____.
- A. cancer
 - B. obesity
 - C. diabetes
 - D. depression
27. What does the word *surf* mean as used in the fourth paragraph?
- A. Spend time swimming in the ocean
 - B. Look at different websites
 - C. Watch late-night television
 - D. Complete online assignments
28. Which statement would *not* be inferred by the reader?
- A. Children need more sleep than adults do.
 - B. The CDC study was not nationwide.

- C. Most auto accidents are caused by tired drivers.
 - D. Sleep loss can have dramatic effects on health.
- 29.** Which of the following statements is an opinion?
- A. Lack of sleep correlates with obesity and diabetes.
 - B. The CDC surveyed several thousand people.
 - C. Many people stay up late to watch TV.
 - D. Driving when tired is irresponsible behavior.
- 30.** The main idea of the passage is _____.
- A. the CDC keeps an eye out for new potentially threatening health issues
 - B. children require several more hours of sleep per night than adults do
 - C. more people are staying up at night to surf the Internet or watch television
 - D. lack of adequate sleep is becoming a major national health problem

Eat Your Vegetables

By studying the role diet might have in the prevention of cancer, recent studies have also noted that a vegetarian, or meatless, diet can help improve a person's overall health. A true vegetarian diet consists of a variety of grains, fruits, vegetables, nuts, and pulses—edible seeds from legumes such as peas, beans, and lentils. A modified vegetarian diet, known as lacto-ovo vegetarian, may include dairy products and eggs. A vegan diet excludes any food with animal origins, including butter, eggs, and honey.

When properly planned, a true vegetarian diet can provide a person with all essential nutrients, protein, and carbohydrates. In one study, researchers at Oxford University noted that overall, a vegetarian diet is lower in saturated fats and higher in fiber than other diets. The study noted that people who followed a vegetarian diet were generally found to have lower cholesterol and lower BMI (a measure of body fat based on a person's weight and height) and to be at a lower risk for certain types of heart disease. From the evidence presented, researchers suggested that the

adoption of a vegetarian diet could prevent more than 30,000 deaths a year that are attributed to heart disease.

Other available information indicates that vegetarians live, on average, seven years longer than meat eaters do. Throughout the world, breast, colon, and prostate cancers are more common among people who have a high-fat, high-meat, low-fiber diet. Former Surgeon General C. Everett Coop has said that diet is a factor in 70 percent of all people who die from disease in the United States. On the whole, vegetarians are less likely to be afflicted with chronic diseases than those who make meat a centerpiece of their diet.

31. Which statement would *not* be inferred by the reader?
- A. Removing meat from the diet may lower risk of heart disease.
 - B. High-fat diets correlate to certain kinds of cancers.
 - C. People on a vegan diet may eat yogurt and cheese.
 - D. Fiber is more prevalent in vegetables than in meat.
32. What is the meaning of the word *pulses* as it appears in the first paragraph?
- A. The regular throbbing of the arteries caused by successive contractions of the heart
 - B. The general attitude of the public or a specific population toward health concerns
 - C. The edible seeds produced by legumes such as peas, beans, or lentils
 - D. Any type of food with animal origins such as butter, honey, or eggs
33. What is the author's attitude toward vegetarianism?
- A. Scoffing
 - B. Positive
 - C. Cautious
 - D. Uninterested
34. A vegetarian diet is said to lower all of the following EXCEPT _____.

- A. the need for protein
- B. the percentage of body fat
- C. the risk of heart disease
- D. cholesterol

... And I Can't Get Up!

Without a doubt, one of the biggest risks to the elderly today is falling. It is also one of the most common accidents that people age 65 and older experience. Some just receive a few bumps and bruises, while others are hurt so badly that they cannot ever fully recover.

U.S. health officials surveyed thousands of elderly people and found that approximately one in six of them had fallen in the past three months. A third of these people sustained considerable injuries, including the most dreaded break of all, a hip fracture. Approximately 16,000 people even died from the injuries they suffered, whereas even more were left completely disabled. Center for Disease Control and Prevention (CDC) epidemiologist Judy Stevens stated, "It's a tremendous public health problem because so many older adults are affected."

It only takes one fall to completely steal an older person's self-confidence. According to a CDC report, "Even when those injuries are minor, they can seriously affect older adults' quality of life by inducing a fear of falling, which can lead to self-imposed activity restrictions, social isolation, and depression."

Along with an admonition to move slowly and carefully, the CDC also recommends that the elderly get enough gentle exercise or physical therapy to help strengthen their muscles and improve their balance. This will not only reduce the number of falls but also give a real boost to older adults' self-esteem.

35. What is the main idea of the passage?

- A. Most falls experienced by the elderly are either disabling or fatal.
- B. Falling is one of the biggest health risks for older people.
- C. Elderly people's self-confidence is threatened by falling.
- D. The CDC claims that regular exercise will prevent all falls.

36. What is the meaning of the word *admonition* as used in the last paragraph?
- A. Permission
 - B. Prescription
 - C. Caution
 - D. Verdict
37. Which statement would *not* be inferred by the reader?
- A. Falls can result in permanent disability.
 - B. One-third of all falls involve hip fractures.
 - C. Physical therapy can reduce the risk of falling.
 - D. Some elderly people die from falling.
38. Which of the following statements is an opinion?
- A. Elderly people fall frequently.
 - B. Elderly people may restrict activities.
 - C. Elderly people can improve their balance.
 - D. Elderly people should not live alone.

Bone Density Testing

Almost everyone knows, thanks to everything from newspaper articles to endless television commercials, that bone density is a major health concern for women. Osteoporosis has become a familiar term, and more and more women are booking bone density tests to make sure all is well underneath the skin.

In all the hype, however, there are certain people who are being overlooked: men. It appears that older men need routine checks for bone thinning as well. A new computerized tool sponsored by the World Health Organization is being used to identify the people most at risk for experiencing a broken bone. One of its findings is that men older than 70 years of age should have a bone mineral density x-ray test on a regular basis.

This tool, called FRAX, calculates the risk of a person experiencing a hip, wrist, shoulder, or spine fracture within the next decade. Those tested were age 40 or older and either had osteoporosis or low bone mass. FRAX takes many different elements into consideration when figuring a person's risk level. It factors in diet, exercise, and exposure to sunlight, for example. It also looks at where people live, what genetic factors might be involved, as well as lifestyle factors such as smoking, heavy alcohol consumption, and the use of steroids.

The National Osteoporosis Foundation has used the FRAX predictions to create updated guidelines. Their new recommendations not only include bone density tests for men but also a stronger emphasis on the importance of weight-bearing and muscle-strengthening exercises and an increased amount of vitamin D supplementation.

39. What is the main idea of the passage?
- A. Osteoporosis is a terrible disease for women to have.
 - B. The risk of osteoporosis is greater than it was decades ago.
 - C. The World Health Organization is concerned about osteoporosis.
 - D. New technology shows that men are also at risk from osteoporosis.
40. What is the meaning of the word *booking* as used in the first paragraph?
- A. Scheduling
 - B. Contracting
 - C. Traveling
 - D. Charging
41. FRAX takes into account all of the following factors EXCEPT _____.
- A. lifestyle choices
 - B. exposure to toxins
 - C. genetic heritage
 - D. exposure to sunlight
42. What conclusion can you draw from the first sentence of the passage?

- A. Osteoporosis is more common than anyone previously imagined.
- B. The media give a lot of overall coverage to osteoporosis.
- C. Only women are at high risk for developing bone thinning.
- D. Thinning bones is not considered a serious medical problem.

Singing the Blues

Almost anyone who lives in a place where the winter months are mostly dark and rainy or snowy knows what it is like to yearn longingly for “just a few rays.” For some people, however, this feeling is much more than a simple longing; it is a physical and emotional need. These people suffer from seasonal affective disorder (SAD).

Although in the past the experience has been put down to nothing more than “winter blues,” more and more physicians are recognizing the fact that for some, it is much more than a mood swing. Those with SAD not only get depressed, they struggle with lethargy and chronic fatigue, often to the point of impairing their daily lives. Other symptoms include anxiety, social withdrawal, appetite changes, weight gain, and insomnia.

Although more women than men are diagnosed with SAD, men seem to have the most severe symptoms. Those who live in the north and those with a family history of SAD are at highest overall risk.

Currently SAD is considered a subtype of bipolar disorder and/or depression, and physicians rely on thorough psychological and physical examinations to determine if a patient actually has the condition. If left untreated, SAD can actually lead to complications such as substance abuse or even suicidal thoughts. Treatment focuses primarily on light therapy but may be supplemented with medications and psychotherapy.

43. What is the main idea of the passage?

- A. Everyone should move to the Sunshine State.
- B. The “winter blues” are exaggerated.
- C. Sadness may sometimes be seasonal.
- D. Men get the worst SAD symptoms.

44. The word *lethargy* as used in the second paragraph of the passage can best be defined as _____.
- A. sluggishness
 - B. irritability
 - C. energy
 - D. starvation
45. What is the author's primary purpose in writing this essay?
- A. To entertain
 - B. To inform
 - C. To reflect
 - D. To persuade
46. Identify the overall tone of the essay.
- A. Sympathetic
 - B. Lighthearted
 - C. Irritated
 - D. Offended
47. Choose the best summary of the passage.
- A. Sufferers of SAD know that it is more than just longing for light, but doctors have been slow to recognize that it is a real syndrome with serious consequences. Doctors whose patients gain weight or have trouble sleeping in winter might wish to test for SAD.
 - B. SAD is a series of symptoms rather than a disorder in its own right. It affects mostly women during the winter months. Treatments for SAD include light therapy, and complications may include suicidal thoughts.
 - C. SAD is a physical and emotional need for light that can have ill effects on health. It affects northern dwellers and is considered a type of depression or bipolar disorder. Light therapy, psychotherapy, and medication may help.
 - D. More women than men have SAD, but men have worse symptoms, which may include anxiety, weight gain, and insomnia. Physicians

are beginning to recognize that this phenomenon is more than just a mood swing and are treating it energetically.

VOCABULARY AND GENERAL KNOWLEDGE

50 items

Suggested time: 50 minutes

1. Select the meaning of the underlined word in the following sentence.

The steady breeze caused dry leaves to waft over the creek.

- A. Sink
- B. Dive
- C. Wave
- D. Float

2. What is another word for *contemptuous*?

- A. Sympathetic
- B. Exhausted
- C. Scornful
- D. Insensitive

3. What is the meaning of *ostracize*?

- A. Snub
- B. Hide from
- C. Condescend to
- D. Hire

4. Select the meaning of the underlined word in the following sentence.

The hospital accepts a certain quota of indigent patients.

- A. Impoverished
- B. Resentful
- C. Apathetic
- D. Uninjured

5. A nit is a kind of _____.

- A. abscess
- B. parasite
- C. bandage
- D. infection

6. *Hypothetical* is best defined as being _____.

- A. rigorous
- B. short-term
- C. assumed
- D. convinced

7. Select the meaning of the underlined word in the following sentence.

Please swathe the baby and take her to the nursery.

- A. Nurse
- B. Cleanse
- C. Change
- D. Wrap

8. In medicine, to be resistant is to be _____.

- A. unwilling
- B. unaffected by
- C. opposed to
- D. accepting of

9. Something that is systematic is organized and planned. Another word for this might be _____.

- A. involuntary
- B. universal
- C. formulaic
- D. manual

10. A synthetic drug is _____.

- A. man-made
- B. phony
- C. atypical
- D. futile

11. What is another word for *antidote*?

- A. Purity
- B. Habitat
- C. Remedy
- D. Venom

12. Select the meaning of the underlined word in the following sentence.

Surgery is often a sanguinary procedure.

- A. Hopeful or cheerful
- B. Involving bloodshed
- C. Difficult and protracted
- D. Tricky and sensitive

13. Select the meaning of the underlined word in the following sentence.

Older patients with dementia may show signs of puerilism.

- A. Congeniality
- B. Depression
- C. Irritability
- D. Childishness

14. Which word refers to the surgical removal of an organ's contents?

- A. Vivisection
- B. Amputation
- C. Evisceration
- D. Augmentation

15. What is another word for *flux*?

- A. Quantity
- B. Discharge
- C. Inflation
- D. Strength

16. What is the meaning of *regulations*?

- A. Adjustments
- B. Supervisors
- C. Rules and laws
- D. Government officials

17. What is the best description for *assembled product* in the following sentence?

The provisions apply to any “electronic product,” which is defined as any manufactured or assembled product (or component, part, or accessory of such product) that, when in operation, (i) contains or acts as part of an electronic circuit and (ii) emits electronic product radiation.

- A. A product that is collected
- B. A product that is legislated
- C. A product that is put together
- D. A product that is agreed upon

18. What is the best description of the verb *emit*?

- A. To discharge
- B. To exclude
- C. To dismiss

D. To moderate

19. One cranial bone is the _____.

- A. partial
- B. parietal
- C. pariah
- D. parhelion

20. Select the meaning of the underlined word in the following sentence.

This vaccine must only be used intramuscularly and as a single-dose vial.

- A. Between muscles
- B. Into muscles
- C. Without muscles
- D. On top of muscles

21. The ankle bone may be called the _____.

- A. talus
- B. talon
- C. fascia
- D. fascine

22. Select the meaning of the underlined word in the following sentence.

The professor's lecture seemed to be a bit derivative.

- A. Unoriginal
- B. Monotonous
- C. Condescending
- D. Long-winded

23. What is the meaning of *histrionics*?

- A. Accomplishments
- B. Daring acts

- C. Examinations
- D. Emotional behavior

24. Select the meaning of the underlined word in the following sentence.

Did the interns contravene the doctor's orders?

- A. Comply with
- B. Misjudge
- C. Comprehend
- D. Disregard

25. *Caudal* refers to which part of the human torso?

- A. Top
- B. Bottom
- C. Front
- D. Back

26. What is the best description for the term *aseptic*?

- A. Combined
- B. Purified
- C. Sedating
- D. Tainted

27. Select the meaning of the underlined word in the following sentence.

Ten patients will receive the experimental drug while 10 take a placebo.

- A. Fallback
- B. Substitute
- C. Control
- D. Curative

28. What does *simulated* mean?

- A. Imitated

- B. Dampened
- C. Motivated
- D. Recapped

29. Select the meaning of the underlined word in the following sentence.

Did that dosage appear to ameliorate the tenderness?

- A. Cause
- B. Improve
- C. Reveal
- D. Restore

30. What is the best description for the term *doleful*?

- A. Unwell
- B. Deprived
- C. Conceited
- D. Downcast

31. Another word for the collarbone might be the _____.

- A. cloaca
- B. cannula
- C. clavicle
- D. clavier

32. What is another word for *unruffled*?

- A. Concerned
- B. Wholesome
- C. Tedious
- D. Composed

33. Select the meaning of the underlined word in the following sentence.

Occasionally, this medicine causes an adverse reaction.

- A. Unfavorable

- B. Contrary
- C. Noticeable
- D. Startling

34. The *C* in *C-section* stands for _____.

- A. Carthusian
- B. Caesarean
- C. Cartesian
- D. Caedmon

35. Select the meaning of the underlined word in the following sentence.

Contusions or scratches may be treated on-site.

- A. Breaks
- B. Disorientation
- C. Bruises
- D. Abrasions

36. A condition that is chronic is _____.

- A. harmless
- B. critical
- C. contagious
- D. recurring

37. To alleviate a symptom is to _____.

- A. relieve it
- B. diagnose it
- C. suffer from it
- D. manage it

38. If you give a patient medication BID, you give it _____.

- A. as needed
- B. every two hours

- C. twice daily
- D. with food

39. Select the meaning of the underlined word in the following sentence.

Many interesting discoveries were made at the inquest.

- A. Tryout
- B. Intake
- C. Autopsy
- D. Checkup

40. A mass of tissue formed in the ovary is known as the _____.

- A. corpus delicti
- B. corpus luteum
- C. corpus striatum
- D. corpus callosum

41. Select the meaning of the underlined word in the following sentence.

Julia and her coterie are often out at local clubs until the wee hours.

- A. A close group of friends
- B. An extended family
- C. An engaged person
- D. A manager or director

42. What is the meaning of *verified*?

- A. Belittled
- B. Confirmed
- C. Anecdotal
- D. Implicit

43. If a pharmacy is in compliance, it _____.

- A. shows flexibility

- B. receives criticism
- C. meets requirements
- D. has been disciplined

44. What is the best description for the abbreviation *CDC*?

- A. An online social network
- B. A test for postgraduate students
- C. A well-known pharmaceutical
- D. A public health association

45. The abbreviation PDR refers to a _____.

- A. drug
- B. procedure
- C. book
- D. muscle group

46. Select the meaning of the underlined word in the following sentence.

The accident left her with a painful laceration.

- A. Gait
- B. Cut
- C. Headache
- D. Welt

47. A hemostat would be used to limit _____.

- A. pain
- B. bleeding
- C. fever
- D. coughing

48. An enervated patient is _____.

- A. anxious
- B. immature

- C. tired
- D. frightened

49. If a lump under the skin is palpable, what is true?

- A. It is malignant.
- B. It has burst.
- C. It is warm.
- D. It can be felt.

50. Select the meaning of the underlined word in the following sentence.

Apply a thin film of cream to the affected area once or twice a day depending on the acuteness of the condition.

- A. Involved
- B. Diseased
- C. Assumed
- D. Perceived

GRAMMAR

50 items

Suggested time: 50 minutes

1. Which sentence is written correctly?

- A. Maria has an unusual background, she started off as a student of geology.
- B. Maria has an unusual background; she started off as a student of geology.
- C. Maria has an unusual background she started off as a student of geology.

D. Maria has an unusual background: she started off as a student of geology.

2. Select the phrase that will make the following sentence grammatically correct.

Until the semester ends, Lily _____.

- A. is not traveling far from town
- B. has not traveled far from town
- C. will not have traveled far from town
- D. will not travel far from town

3. Which word is *not* spelled correctly in the context of the following sentence?

The ingenious foxes managed to lever open one side of the coop.

- A. ingenious
- B. foxes
- C. lever
- D. coop

4. Which sentence is grammatically correct?

- A. When the word was unfamiliar, Bonita grabbed the dictionary and looked up the word in her textbook.
- B. Bonita looked up the unfamiliar word from her textbook, having grabbed the dictionary.
- C. Bonita looked up the word in the dictionary, which was unfamiliar in her textbook.
- D. Grabbing the dictionary, Bonita looked up the unfamiliar word from her textbook.

5. Which word is used incorrectly in the following sentence?

Her mentor's advice was bound to effect her final decision.

- A. mentor's
- B. advice

- C. effect
- D. decision

6. Select the correct word for the blank in the following sentence.

Without _____, I never would have finished my degree.

- A. she
- B. he
- C. them
- D. hers

7. What word is best to fill in the blank in the following sentence?

Jenny loaned Luis 50 dollars, and he repaid _____ within the month.

- A. her
- B. she
- C. him
- D. its

8. Which word is used incorrectly in the following sentence?

She is already an adjunct at a college in Raleigh, the capitol of North Carolina.

- A. already
- B. adjunct
- C. college
- D. capitol

9. Which of the following words fits best in the following sentence?

_____ having finished her coursework, Lorene expects to spend another year on campus.

- A. Despite
- B. Although
- C. Thus

D. However

10. What punctuation is needed in the following sentence to make it correct?

Please order these supplies stethoscopes, notepads, and thermometers.

- A. Period
- B. Question mark
- C. Semicolon
- D. Colon

11. Which of the following is spelled correctly?

- A. Forfit
- B. Forefet
- C. Forfeit
- D. Forefit

12. Select the word or phrase that makes the following sentence grammatically correct.

I was extremely surprised _____ of her dismissal from the staff.

- A. learning
- B. to learn
- C. of learning
- D. have learned

13. Select the word in the following sentence that is *not* used correctly.

Try not to loose patience or suffer a drop in morale.

- A. loose
- B. patience
- C. suffer
- D. morale

14. Select the word that makes the following sentence grammatically correct.

The girls have apparently _____ curfew at least twice this week.

- A. broke
- B. break
- C. breaking
- D. broken

15. Which sentence is grammatically correct?

- A. With the black mustache, the actor had the largest role.
- B. The actor had the largest role with the black mustache.
- C. Having the largest role, the actor had a black mustache.
- D. The actor with the black mustache had the largest role.

16. Select the word that makes the following sentence grammatically correct.

The flock huddle against the wind that ruffles _____ feathers.

- A. its
- B. their
- C. it's
- D. they're

17. What word is best to substitute for the underlined words in the following sentence?

The staff sergeant and I reviewed the enlisted men's records.

- A. Us
- B. We
- C. They
- D. He

18. Which word is *not* spelled correctly in the context of the following sentence?

Nothing can be more delightful then a late-night swim in the reservoir.

- A. Nothing
 - B. delightful
 - C. then
 - D. reservoir
19. What punctuation is needed in the following sentence to make it correct?
- Although we had met earlier the busy doctor could not recall my name.
- A. Period
 - B. Question mark
 - C. Comma
 - D. Semicolon
20. Which of the following is spelled correctly?
- A. Labertory
 - B. Laberatory
 - C. Labratory
 - D. Laboratory
21. Which sentence is written correctly?
- A. Bao Lin has an excellent memory for faces; she recognized the patient at once.
 - B. Bao Lin has an excellent memory for faces, she recognized the patient at once.
 - C. Bao Lin has an excellent memory, for faces; she recognized the patient at once.
 - D. Bao Lin has an excellent memory (for faces) she recognized the patient at once.

22. Select the word that makes the following sentence grammatically correct.

She is very caring; _____, she needs more training before she is ready to work in the hospital.

- A. also
- B. nevertheless
- C. hitherto
- D. otherwise

23. Which word is *not* spelled correctly in the context of the following sentence?

To succeed in this position, it is necessary to menage people well.

- A. succeed
- B. position
- C. necessary
- D. menage

24. Select the word that makes the following sentence grammatically correct.

The centrifuge cannot run by _____; it requires constant attention.

- A. oneself
- B. itself
- C. herself
- D. themselves

25. Which sentence is the clearest?

- A. A vegetable garden was planted by the family behind their house.
- B. The family planted a vegetable garden behind their house.
- C. The family behind their house planted a vegetable garden.
- D. A vegetable garden behind their house was planted by the family.

26. Select the phrase or clause that is misplaced in the following sentence.

With torn pages, I returned the book I'd just bought to the store.

- A. With torn pages
- B. I returned the book
- C. I'd just bought
- D. to the store

27. Select the word or phrase that makes the following sentence grammatically correct.

Two students _____ the machine while the third oversaw their work.

- A. operate
- B. operating
- C. were operating
- D. has been operating

28. Select the phrase in the following sentence that is *not* used correctly.

Having complete the coursework that was required, Jorge now prepared for exam week.

- A. Having complete
- B. was required
- C. now prepared
- D. prepared for

29. Select the phrase that makes the following sentence grammatically correct.

I hope that my parents _____ if I am able to graduate early.

- A. are delighted
- B. were delighted
- C. will be delighted
- D. will have been delighted

- 30.** What punctuation is needed in the following sentence to make it correct?

Were you able to make sense out of the material in the third chapter

- A. Period
- B. Comma
- C. Question mark
- D. Semicolon

- 31.** Select the phrase that will make the following sentence grammatically correct.

Over the next few months, we _____.

- A. listen and learn
- B. listening and learning
- C. had listened and learned
- D. will listen and learn

- 32.** Which word is used incorrectly in the following sentence?

Jeremiah seemed enthusiastically when we reported on our astonishing success.

- A. seemed
- B. enthusiastically
- C. astonishing
- D. success

- 33.** Select the sentence that is grammatically correct.

- A. Kindly hand the keys over to him and me.
- B. Kindly hand the keys over to him and I.
- C. Kindly hand the keys over to me and him.
- D. Kindly hand the keys over to he and I.

34. What word is best to substitute for the underlined words in the following sentence?

Could Kendra manage to carry both Kendra's books and yours?

- A. her
 - B. his
 - C. she's
 - D. hers
35. Which sentence is grammatically correct?
- A. Dr. Lucas showed Jeb and they how to run the spectrometer.
 - B. Dr. Lucas showed Jeb and their how to run the spectrometer.
 - C. Dr. Lucas showed Jeb and theirs how to run the spectrometer.
 - D. Dr. Lucas showed Jeb and them how to run the spectrometer.
36. What punctuation is needed in the following sentence to make it correct?
- Do not be afraid to ask questions in his class he is very approachable and explains things well.
- A. Hyphen
 - B. Comma
 - C. Apostrophe
 - D. Semicolon
37. Which of the following is spelled correctly?
- A. Vulnerable
 - B. Vulnerble
 - C. Vulnrable
 - D. Vulnarbal
38. Which word is used incorrectly in the following sentence?
- Many pass through those doors, but only a few deserves their degrees.

- A. pass
- B. through
- C. deserves
- D. degree

39. Which of the following words or phrases fits best in the following sentence?

If you ever _____ at County Medical, you would know how grueling a shift there can be.

- A. work
- B. are working
- C. had worked
- D. working

40. Which word is *not* spelled correctly in the context of the following sentence?

I like the way the bride's stationery compliments her wedding decor.

- A. bride's
- B. stationery
- C. compliments
- D. decor

41. Which sentence is grammatically correct?

- A. Lying on the sidewalk, Jon found a silver woman's ring.
- B. Jon found a silver woman's ring lying on the sidewalk.
- C. Jon found a woman's silver ring lying on the sidewalk.
- D. Lying on the sidewalk, Jon found a woman's silver ring.

42. Select the word that makes the following sentence grammatically correct.

The committee finished _____ report in time for the annual review.

- A. its
- B. their
- C. it's
- D. they're

43. What punctuation is needed in the following sentence to make it correct?

Courtney ran around the track and her roommates kept track of her time.

- A. Period
- B. Comma
- C. Colon
- D. Apostrophe

44. Which of the following is spelled correctly?

- A. Insessant
- B. Incesant
- C. Incessant
- D. Incessant

45. What word is best to substitute for the underlined words in the following sentence?

The coats hanging on the hooks are the patients'.

- A. his
- B. their
- C. them
- D. theirs

46. Which word is used incorrectly in the following sentence?

Please give the folder to whoever replies to your page.

- A. give
- B. envelope

- C. whoever
- D. replies

47. Which sentence is the clearest?

- A. The car with the broken axle is now on blocks in his yard.
- B. The car is now on blocks with the broken axle in his yard.
- C. In his yard the car is now on blocks with the broken axle.
- D. With the broken axle the car is now in his yard on blocks.

48. Select the phrase or clause that is misplaced in the following sentence.

I noticed a number of workers from my car window who were repairing the road alongside the mall.

- A. of workers
- B. from my car window
- C. who were repairing the road
- D. alongside the mall

49. Select the word that will make the following sentence grammatically correct.

The patients are resting comfortably; _____, bed checks should still be done every half hour.

- A. despite
- B. however
- C. otherwise
- D. afterward

50. Which sentence is grammatically correct?

- A. Having cancelled her flight and driven home, Jessica typed an angry letter to the airline.
- B. After her flight was cancelled, Jessica drove home and typed an angry letter to the airline.
- C. When Jessica's flight was cancelled and she drove home, she typed to the airline an angry letter.

- D. Jessica typed an angry letter to the airline, driving home after her flight was cancelled.

BASIC MATH SKILLS

50 items

Suggested time: 50 minutes

1. Multiply and simplify: $2\frac{3}{5} \times 1\frac{1}{8} =$
 - A. $2\frac{37}{40}$
 - B. $2\frac{5}{8}$
 - C. $2\frac{3}{40}$
 - D. $3\frac{1}{20}$
2. In Downsville, a bus token cost 25¢ in 1990. This year, a bus token cost 75¢. What is the percent of increase in the cost of the token?
 - A. 50%
 - B. 75%
 - C. 200%
 - D. 300%
3. A cake recipe calls for $2\frac{1}{2}$ cups of flour. How many cups are needed to make 6 cakes?
 - A. 12 cups
 - B. 13 cups
 - C. 14 cups
 - D. 15 cups
4. Takuo bought snacks from the vending machine. He paid \$1.35 for cookies and got change from his \$5. Then he paid another \$1.75 for a

bag of chips. How much money did he have left?

- A. \$1.50
- B. \$1.70
- C. \$1.90
- D. \$2.10

5. Express $\frac{4}{5}$ as a percent.

- A. 20%
- B. 40%
- C. 50%
- D. 80%

6. How many kilometers are there in 12 miles?

- A. 7.5 miles
- B. 13.2 miles
- C. 19.2 miles
- D. 22 miles

7. What date in Arabic numerals is Roman numeral MCLXV? (Enter numeric value only.)

8. Multiply: $0.25 \times 0.4 =$

- A. 0.01
- B. 0.1
- C. 1
- D. 10

9. Multiply: $0.22 \times 0.75 =$

- A. 0.00165
- B. 0.0165
- C. 0.165
- D. 1.65

10. At the emergency room Thursday morning, ambulances delivered 5 laceration victims, 8 people with broken bones, 2 heart attack patients, and 5 patients with breathing difficulties. What percentage of the deliveries were people with broken bones? (Enter numeric value only.)
- _____
11. Which numeric system was a base 20 system?
- A. Mayan
 - B. Babylonian
 - C. Roman
 - D. Arabic
12. What is the least common denominator for $\frac{3}{8}$ and $\frac{1}{12}$? (Enter numeric value only.)
- _____
13. The trumpet blows reveille at 6:30 A.M. What time is that in military time?
- A. 0630
 - B. 6030
 - C. 1503
 - D. 1530
14. At Teeburg Community College, the ratio of teachers to students is 1:12. Which could be the actual student and teacher population at Teeburg?
- A. 24 teachers, 312 students
 - B. 85 teachers, 1,020 students
 - C. 89 teachers, 979 students
 - D. 92 teachers, 1,288 students
15. Divide and simplify: $4\frac{5}{8} \div 1\frac{1}{2} =$

- A. $4\frac{1}{24}$
- B. $3\frac{23}{24}$
- C. $3\frac{1}{12}$
- D. $3\frac{1}{16}$

16. Bai Lin estimates that of her monthly paycheck, she puts 10% in savings and spends 30% on living expenses. If she has \$1,545 left after that, how much is her monthly paycheck?
- A. \$2,175
 - B. \$2,250
 - C. \$2,575
 - D. \$2,650
17. The purchasing department ordered 500 surgical caps at \$4.99 apiece and 6 cases of nurse caps at \$23.99 per case. How much did they spend on this order? (Enter numeric value only. If rounding is necessary, round to the dollar.)
- _____
18. Grayson left a \$2.43 tip for a lunch that cost \$13.50. What percent tip did he leave?
- A. 16%
 - B. 18%
 - C. 20%
 - D. 22%
19. How many liters are there in 500 milliliters?
- A. 0.5 liters
 - B. 5 liters
 - C. 50 liters
 - D. 500,000 liters
20. A plan for a shed is drawn on a 1:10 scale. If the roof of the real shed measures 4 feet by 5 feet, what were the measurements on the plan?

- A. 80 inches by 100 inches
- B. 40 inches by 50 inches
- C. 4.8 inches by 6 inches
- D. 4 inches by 5 inches

21. Subtract: $43.21 - 1.234 =$

- A. 41.976
- B. 41.067
- C. 30.87
- D. 30.717

22. The number 8.4 is 15% of what number? (Enter numeric value only.)

23. Add and simplify: $5\frac{2}{3} + \frac{6}{7} =$

- A. $6\frac{1}{21}$
- B. $6\frac{1}{7}$
- C. $6\frac{3}{14}$
- D. $6\frac{11}{21}$

24. At the concession stand, Joanie bought a hot dog for \$1.25, popcorn for \$1.35, and a drink for \$2. She paid with a \$5 bill. What is the least number of coins she could have received as correct change?

- A. One
- B. Two
- C. Three
- D. Four

25. Convert this military time to regular time: 2120 hours.

- A. 9:20 A.M.
- B. 9:20 P.M.
- C. 2:12 A.M.
- D. 2:12 P.M.

26. Olivia's Bakery gives out one extra cupcake for each dozen sold, to make a "baker's dozen" of 13 in all. How many extra cupcakes does the bakery add to a special order of 180 cupcakes?

- A. 12
- B. 13
- C. 14
- D. 15

27. What is 110% of 40?

- A. 44
- B. 50
- C. 55
- D. 60

28. Divide: $92 \div 11 =$

- A. 8 r3
- B. 8 r4
- C. 8 r7
- D. 9 r1

29. Stanton runs 2 miles twice a week and 3 miles once a week. If he runs every week, how many miles does he run in a year?

- A. 185
- B. 260
- C. 330
- D. 364

30. What is 15% of 95?

- A. 14.25
- B. 18.5
- C. 24.25
- D. 28.5

31. Express $\frac{12}{30}$ as a decimal.
- A. 0.004
 - B. 0.04
 - C. 0.4
 - D. 4
32. How many kilograms are there in 11 pounds?
- A. 5 kilograms
 - B. 5.5 kilograms
 - C. 22.2 kilograms
 - D. 24.2 kilograms
33. Express the ratio of 6:7 as a percentage.
- A. 67%
 - B. 76%
 - C. 86%
 - D. 93%
34. At Cosmic Comix, Svante can buy three comic books for \$9.99. How many can he buy for \$50?
- A. 12
 - B. 15
 - C. 18
 - D. 21
35. Write the date 1776 in Roman numerals.
- A. MDCCLXXVI
 - B. MDDLXXI
 - C. MCCDLXVI
 - D. MCMLXXVI
36. In his stamp collection, Bruno has 15 more stamps from Europe than from Africa, and 18 more stamps from Asia than from Africa. If he

has 27 stamps from Europe, how many Asian stamps does he have?

- A. 12
- B. 22
- C. 30
- D. 40

37. Multiply: $5.2 \times 2.5 =$

- A. 0.013
- B. 0.13
- C. 1.3
- D. 13

38. Multiply: $0.88 \times 2.1 =$

- A. 0.01848
- B. 0.1848
- C. 1.848
- D. 18.48

39. If the outside temperature is currently 15 degrees on the Celsius scale, what is the approximate temperature on the Fahrenheit scale?

- A. 59°F
- B. 61°F
- C. 63.5°F
- D. 65.2°F

40. A landscaping plan is drawn on a 1:50 scale. If a deck in the plan measures 12 cm by 10 cm, how large is the deck in real life?

- A. 12 m by 10 m
- B. 6 m by 5 m
- C. 5 m by 2 m
- D. 4 m by 3 m

41. Rebecca is able to paint 12 pickets on her picket fence in an hour. Her fence is 72 feet long, with 2 pickets per foot. How long will it take her to paint the fence?
- A. 2.4 hours
 - B. 6 hours
 - C. 12 hours
 - D. 16.4 hours
42. Divide: $14.152 \div 12.2 =$
- A. 0.0116
 - B. 0.116
 - C. 1.16
 - D. 11.6
43. Subtract and simplify: $\frac{7}{4} - \frac{1}{12} =$
- A. $\frac{1}{2}$
 - B. $1\frac{3}{8}$
 - C. $1\frac{1}{4}$
 - D. $1\frac{2}{3}$
44. At the Farmer's Market, James bought 6 lemons for \$1.44. How many did Casey buy for \$4.80?
- A. 12
 - B. 18
 - C. 20
 - D. 24
45. Subtract and simplify: $2\frac{11}{12} - \frac{3}{16} =$
- A. $1\frac{7}{8}$
 - B. $2\frac{1}{8}$
 - C. $2\frac{5}{6}$
 - D. $2\frac{35}{48}$
46. Express 85% as a fraction in lowest terms.

- A. $\frac{17}{20}$
- B. $\frac{5}{6}$
- C. $\frac{13}{15}$
- D. $\frac{9}{10}$

47. 176 is 88% of what number? (Enter numeric value only.)

48. Carlotta earned 2% on her savings of \$1,050. How much did she have then?

- A. \$1,052
- B. \$1,060
- C. \$1,071
- D. \$1,075

49. Of the 300 patients receiving a placebo, 60% showed improvement in their symptoms. How many patients showed no improvement? (Enter numeric value only.)

50. How many cups are there in 2 gallons? (Enter numeric value only.)

BIOLOGY

25 items

Suggested time: 25 minutes

1. Which organelle provides storage space for the cell?

- A. Mitochondrion
- B. Vacuole

- C. Cell membrane
- D. Ribosome

2. Which is a byproduct of fermentation in muscle cells?
 - A. Ethanol
 - B. Pyruvic acid
 - C. Lactic acid
 - D. Oxygen
3. In which phase of mitosis do new nuclear membranes form around sets of chromosomes?
 - A. Prophase
 - B. Anaphase
 - C. Telophase
 - D. Interphase
4. Which names a final step in protein synthesis?
 - A. DNA unzips.
 - B. Amino acids bond.
 - C. Transfer RNA bonds to messenger RNA.
 - D. Messenger RNA moves to ribosomes.
5. Polydactylism, the presentation of extra digits on hands or feet, is carried on the dominant allele. In the case of two parents with polydactylism, what percentage of their offspring is predicted to manifest the anomaly?
 - A. 25%
 - B. 50%
 - C. 75%
 - D. 100%
6. Foods with a high salt content do not have to be refrigerated. What natural process prevents these foods from spoiling?

- A. Osmosis
 - B. Diffusion
 - C. Active transport
 - D. Passive transport
7. What is necessary for active transport through a membrane to take place?
- A. Glucose
 - B. Oxygen
 - C. Sodium
 - D. ATP
8. Which is true of enzymes?
- A. They are made from lipids.
 - B. They are made from proteins.
 - C. They form double chains of DNA.
 - D. They bind with catalysts.
9. Which is an example of a gymnosperm?
- A. Red cedar
 - B. Japanese cherry
 - C. Flowering dogwood
 - D. American chestnut
10. _____ is a symbiotic relationship in which one organism benefits and the other is not affected.
- A. Mutualism
 - B. Parasitism
 - C. Commensalism
 - D. Competition
11. Dogs are part of a larger animal group, the Carnivora. What classification is this?

- A. Kingdom
- B. Class
- C. Order
- D. Genus

12. What are saturated fats saturated with?

- A. Hydrogen atoms
- B. Carbon atoms
- C. Oxygen atoms
- D. Nitrogen atoms

13. Which is found in animal cells but not in plant cells?

- A. Centriole
- B. Cytoplasm
- C. Vacuole
- D. Golgi apparatus

14. Ocean waves may tear sponges into pieces, each of which may grow into a new sponge. What is this form of reproduction called?

- A. Budding
- B. Vegetative propagation
- C. Binary fission
- D. Fragmentation

15. How many pairs of homologous chromosomes do humans have?

- A. 13
- B. 23
- C. 26
- D. 46

16. What happens to messenger RNA as it reaches the cytoplasm?

- A. It attaches to a ribosome.
- B. It unzips, exposing nitrogen bases.

- C. It pairs with the DNA bases.
 - D. It pulls free of the DNA strand.
17. Hemophilia is a sex-linked trait carried on the X chromosome. In an example of a male with hemophilia and a female carrier, what percentage of the offspring is predicted to be carriers only?
- A. 0%
 - B. 25%
 - C. 50%
 - D. 100%
18. Which is *not* one of the raw materials needed for cellular respiration?
- A. ADP
 - B. Phosphate
 - C. Water
 - D. Glucose
19. Patient A, who weighs 68 kilograms, steps onto a scale 20 times. The scale consistently weighs Patient A as 75 kilograms. What is true of the measurement?
- A. It is valid, but not reliable.
 - B. It is reliable, but not valid.
 - C. It is both valid and reliable.
 - D. It is neither reliable nor valid.
20. Which one would have the least energy efficiency in nutrient consumption?
- A. Cow
 - B. Caterpillar
 - C. Coyote
 - D. Cricket
21. How should a researcher test the hypothesis that practicing yoga reduces blood pressure?

- A. Record the blood pressure of one male and one female participant before and after participating in a yoga class.
- B. Divide 30 female participants into two groups with similar average blood pressure; test each participant's blood pressure after having her participate in a yoga class.
- C. Divide 30 female participants into two groups with similar average blood pressure; have one group watch television for an hour while the other takes a yoga class, record each participant's blood pressure after the hour. Repeat daily for two weeks.
- D. Start with 15 men and 15 women; have the men watch television for an hour while the women take a yoga class, record each participant's blood pressure after the hour. Reverse, having the men take a yoga class while the women watch television.

22. How do green plants use nitrates in the nitrogen cycle?

- A. To synthesize proteins
- B. To store food
- C. To decompose ammonia
- D. To break down nitrites

23. Which color of light is least effective at driving photosynthesis?

- A. Violet
- B. Green
- C. Orange
- D. Red

24. Which might be described as a core of nucleic acid surrounded by a protein coat?

- A. RNA
- B. Virus
- C. Blue-green alga
- D. Saprophyte

25. In contrast with triglycerides, phospholipids are lacking one of which of the following components?
- A. Monosaccharide
 - B. Glycerol
 - C. Phosphates
 - D. Fatty acid

CHEMISTRY

25 items

Suggested time: 25 minutes

1. Aluminum (Al) has 13 protons in its nucleus. What is the number of electrons in an Al^{3+} ion?
 - A. 16
 - B. 13
 - C. 10
 - D. 3
2. Blood with a pH of 1.3 indicates what about the blood sample?
 - A. It is strongly acidic.
 - B. It is strongly basic.
 - C. It is weakly acidic.
 - D. It is weakly basic.
3. A radioactive isotope has a half-life of 20 years. How many grams of a 6-gram sample will remain after 40 years?
 - A. 8
 - B. 6

- C. 3
- D. 1.5

4. Which compound has a nonpolar bond in which the electrons are shared equally?
- A. H_2O
 - B. NH_3
 - C. Cl_2
 - D. CH_4

5. Name the reaction shown.

- A. Single displacement
 - B. Double displacement
 - C. Synthesis
 - D. Acid-base
6. In the solid state, you would expect a nonmetal to be _____.
- A. brittle
 - B. lustrous
 - C. malleable
 - D. conductive
7. The molar mass of some gases is as follows: carbon monoxide—28.00 g/mol; helium—4.00 g/mol; nitrogen—14.01 g/mol; and oxygen—16.00 g/mol. Which would you expect to diffuse most rapidly?
- A. Carbon monoxide
 - B. Helium
 - C. Nitrogen
 - D. Oxygen
8. Which is a triatomic allotrope of oxygen?

- A. Ozone
 - B. Water
 - C. Acidic oxide
 - D. Carbon dioxide
9. Which substance shows a decrease in solubility in water with an increase in temperature?
- A. NaCl
 - B. O₂
 - C. KI
 - D. CaCl₂
10. What is the product of combustion of a hydrocarbon in excess oxygen?
- A. Carbon dioxide and water
 - B. Naphthalene
 - C. Chlorine and bromine
 - D. Carbonium ions
11. Balance this equation: $\text{Zn} + \text{HCl} \rightarrow \text{ZnCl}_2 + \text{H}_2$.
- A. $\text{Zn} + 2\text{HCl} \rightarrow \text{ZnCl}_2 + \text{H}_2$
 - B. $\text{Zn} + \text{HCl} \rightarrow 2\text{ZnCl}_2 + \text{H}_2$
 - C. $2\text{Zn} + \text{HCl} \rightarrow 2\text{ZnCl}_2 + \text{H}_2$
 - D. $\text{Zn} + 4\text{HCl} \rightarrow \text{ZnCl}_2 + \text{H}_2$
12. On the periodic table, where are atoms with the largest atomic radius located?
- A. At the top of their group
 - B. In the middle of their group
 - C. At the bottom of their group
 - D. Along the right-hand side
13. Which of the following compounds is ionic?

- A. NaCl
- B. H₂O
- C. HCl
- D. NH₄

14. How many electrons are in a neutral atom of neon?

- A. 9
- B. 10
- C. 11
- D. 12

15. What is the correct electron configuration for carbon?

- A. $1s^2 2s^2 2p^1$
- B. $1s^2 2s^2 2p^2$
- C. $1s^2 2s^2 2p^3$
- D. $1s^2 2s^2 2p^6 3s^1$

16. A chemist takes 100 mL of a 0.40 M NaCl solution. She then dilutes it to 1L. What is the concentration (molarity) of the new solution?

- A. 0.04 M NaCl
- B. 0.25 M NaCl
- C. 0.40 M NaCl
- D. 2.5 M NaCl

17. A drop of one of these substances rapidly turns litmus dye from blue to red. What substance is it?

- A. Milk
- B. Sea water
- C. Ammonia
- D. Lemon juice

18. To the nearest whole number, what is the mass of one mole of hydrogen chloride?

- A. 36 g/mol
- B. 38 g/mol
- C. 71 g/mol
- D. 74 g/mol

19. What is the charge of a gamma ray?

- A. -1
- B. +1
- C. +2
- D. No charge

20. What is the correct name of MgO ?

- A. Manganese oxide
- B. Magnesium oxide
- C. Magnesium oxate
- D. Magnesium hydroxide

21. What is the oxidation state of the nitrogen atom in the compound NH_3 ?

- A. -3
- B. -1
- C. +1
- D. +3

22. Which of these intermolecular forces might represent attraction between atoms of a noble gas?

- A. Dipole-dipole interaction
- B. London dispersion force
- C. Keesom interaction
- D. Hydrogen bonding

23. If 58.5 g of NaCl (1 mole of NaCl) are dissolved in enough water to make 0.500 L of solution, what is the molarity of the solution?

- A. 1.0 M

- B. 2.0 M
- C. 11.7 M
- D. The answer cannot be determined from the information given.

24. What is the correct formula for sodium nitrate?

- A. Na_2NO
- B. Na_3NO
- C. NaNO_2
- D. NaNO_3

25. Why does fluorine have a higher ionization energy than oxygen?

- A. Fluorine has a smaller number of neutrons.
- B. Fluorine has a larger number of neutrons.
- C. Fluorine has a smaller nuclear charge.
- D. Fluorine has a larger nuclear charge.

ANATOMY AND PHYSIOLOGY

25 items

Suggested time: 25 minutes

1. Which is an anterior feature of the human head?

- A. The nose
- B. The ears
- C. The occipital lobe
- D. The temporal lobe

2. What is the primary hormone secreted by the thyroid?

- A. Oxytocin

- B. TSH
- C. Adrenaline
- D. T4

3. Enlargement of the thyroid, commonly known as a goiter, might be expected to affect _____.

- A. swallowing
- B. insulin levels
- C. sleep
- D. digestion

4. Which kinds of muscles are involved in peristalsis?

- A. Smooth muscles
- B. Cardiac muscles
- C. Skeletal muscles
- D. Epaxial muscles

5. Why might certain young people be underweight?

- A. They are growing in height faster than they are gaining weight.
- B. They eat little protein and too much fat and sugar.
- C. They eat several meals a day and fail to exercise enough.
- D. They seldom eat a meal that contains foods from all food groups.

6. What might an injury to the parietal lobe affect?

- A. Breathing
- B. Attention
- C. Memory
- D. Perception

7. How does the digestive system work with the urinary system?

- A. The digestive system controls the function of the ureter.
- B. The urinary system removes toxins from the products of digestion.

- C. The digestive system manufactures hormones that influence urination.
 - D. The urinary system eliminates some waste products of digestion.
8. Which gland is located superior to the kidney?
- A. Pituitary
 - B. Adrenal
 - C. Hypothalamus
 - D. Pancreas
9. To what two systems might the urethra belong?
- A. Reproductive and endocrine
 - B. Urinary and reproductive
 - C. Endocrine and urinary
 - D. Digestive and cardiovascular
10. The axial skeletal system contains all of these except _____.
- A. the skull
 - B. the ribs
 - C. the breastbone
 - D. the radius
11. The gall bladder is part of the _____.
- A. endocrine system
 - B. urinary system
 - C. digestive system
 - D. nervous system
12. Which is *not* an example of a nonspecific immune response?
- A. Inflammation
 - B. Vasodilation
 - C. Releases of histamine
 - D. Production of antibodies

13. Which organ system is primarily responsible for regulating electrolytes?
- A. The endocrine system
 - B. The urinary system
 - C. The lymphatic system
 - D. The nervous system
14. What is the function of the coronary artery?
- A. It carries oxygenated blood to the heart.
 - B. It carries deoxygenated blood to the lungs.
 - C. It distributes blood to the body.
 - D. It supplies blood to the heart muscle.
15. What condition might result from lack of vitamin C?
- A. Kwashiorkor
 - B. Pellagra
 - C. Rickets
 - D. Scurvy
16. How does the muscular system work with the skeletal system?
- A. Muscles attached to tendons contract to bend the skeleton at the joints.
 - B. The hard bones of the skeleton protect the voluntary muscles of the limbs.
 - C. The cardiac muscles produce calcium that is needed for sturdy bones.
 - D. Smooth muscles on internal organs leach excess minerals from the bones.
17. Which is *not* produced by the pituitary gland?
- A. FSH
 - B. TRH
 - C. LH

D. ADH

18. The ribs are _____ to the lungs in the human body.
- A. medial
 - B. superior
 - C. anterior
 - D. deep
19. What is the normal pH of human arterial blood?
- A. 6.8
 - B. 7.4
 - C. 7.9
 - D. 8.2
20. Which cut is considered a cross section?
- A. A sagittal or frontal section
 - B. A cut along the coronal plane
 - C. A cut along the median plane
 - D. A cut through the transverse plane
21. Which enzyme functions to break down a specific sugar?
- A. Catalase
 - B. Lipase
 - C. Protease
 - D. Lactase
22. The hypothalamus is part of the _____.
- A. cardiovascular system
 - B. endocrine system
 - C. respiratory system
 - D. lymphatic system
23. Which mineral helps to maintain fluid balance in the body?

- A. Potassium
- B. Cobalt
- C. Chromium
- D. Sulfur

24. The skull is _____ to the spinal cord.

- A. anterior
- B. posterior
- C. lateral
- D. superior

25. Which organ system is primarily responsible for integrating voluntary movements?

- A. Cardiovascular system
- B. Digestive system
- C. Respiratory system
- D. Nervous system

<p style="text-align: center;">STOP. IF YOU HAVE TIME LEFT OVER, CHECK YOUR WORK ON THIS SECTION ONLY.</p>

PHYSICS

25 items

Suggested time: 50 minutes

1. Which one has the lowest density?

- A. Water
- B. Cork
- C. Aluminum
- D. Steel

2. Marilyn is driving to a wedding. She drives 4 miles south before realizing that she left the gift at home. She makes a U-turn, returns home to pick up the gift, and sets out again driving south. This time, she drives 1 mile out of her way to pick up a friend. From there, they continue 5 miles more to the wedding. Which of these statements is true about Marilyn's trip?
- A. The displacement of her trip is 6 miles, and the distance traveled is 6 miles.
 - B. The displacement of her trip is 14 miles, and the distance traveled is 14 miles.
 - C. The displacement of her trip is 8 miles, and the distance traveled is 14 miles.
 - D. The displacement of her trip is 6 miles, and the distance traveled is 14 miles.
3. If the force on an object is doubled, how does its acceleration change?
- A. It remains the same.
 - B. It is halved.
 - C. It is doubled.
 - D. It is eliminated.
4. An object has a constant velocity of 50 m/s and travels for 10 s. What is the acceleration of the object?
- A. 0 m/s^2
 - B. 5 m/s^2
 - C. 60 m/s^2
 - D. 500 m/s^2
5. When calculating an object's acceleration, you must do which of the following?
- A. Divide the change in time by the velocity.
 - B. Multiply the velocity by the time.
 - C. Find the difference between the time and velocity.

- D. Divide the change in velocity by the change in time.
6. Which property of a substance does *not* change with a change in temperature?
- A. Mass
 - B. Volume
 - C. Phase
 - D. Solubility
7. 100 N·m of work is done over 20 m. What force was applied to the object that was moved?
- A. 5 N
 - B. 80 N
 - C. 120 N
 - D. 2,000 N
8. A 110-volt appliance draws 2.0 amperes. How many watts of power does it require?
- A. 55 watts
 - B. 108 watts
 - C. 112 watts
 - D. 220 watts
9. A hummingbird's wings beat at 25 beats per second. What is the period of the wing beating in seconds?
- A. 0.04 s
 - B. 0.25 s
 - C. 0.4 s
 - D. 4 s
10. What is the kinetic energy of a 500-kg wagon moving at 10 m/s?
- A. 50 J
 - B. 250 J

C. 2.5×10^4 J

D. 5.0×10^5 J

11. The specific heat capacity of tin is $0.217 \text{ J/(g}^\circ\text{C)}$. Which of these materials would require about twice as much heat as tin to increase the temperature of a sample by 1°C ?
- A. Copper [$0.3844 \text{ J/(g}^\circ\text{C)}$]
 - B. Iron [$0.449 \text{ J/(g}^\circ\text{C)}$]
 - C. Gold [$0.1291 \text{ J/(g}^\circ\text{C)}$]
 - D. Aluminum [$0.904 \text{ J/g}^\circ\text{C}$]
12. A transverse wave transports energy from north to south. In what direction do the particles in the medium move?
- A. Only north to south
 - B. Both northward and southward
 - C. Only east to west
 - D. Both eastward and westward
13. Which of the following describes a vector quantity?
- A. 13 miles
 - B. 13 miles per hour
 - C. 13 miles south
 - D. 13 miles more
14. You drop a 50-g metal cube into a cylinder of water. How can you use displacement to find the density of the cube?
- A. Measure the volume of the displaced water and divide that into 50.
 - B. Measure the volume of the displaced water and divide it by 50.
 - C. Measure the mass of the displaced water and multiply it by 50.
 - D. Measure the mass of the displaced water and divide it by 50.
15. Two objects attract each other with a gravitational force of 12 units. If the distance between them is halved, what is the new force of attraction between the two objects?

- A. 3 units
- B. 6 units
- C. 24 units
- D. 48 units

16. Which of these can you conclude from Ohm's law?

- A. Voltage and current are inversely proportional when resistance is constant.
- B. The ratio of the potential difference between the ends of a conductor to current is a constant, R .
- C. Voltage is the amount of charge that passes through a point per second.
- D. Power (P) can be calculated by multiplying current (I) by voltage (V).

17. Coulomb's law has to do with _____.

- A. electrostatic interaction
- B. rigid body motion
- C. heat conduction
- D. universal gravitation

18. Jack stands in front of a plane mirror. If he is 2.5 feet away from the mirror, how far away from Jack is his image?

- A. 2.5 feet
- B. 3 feet
- C. 4.5 feet
- D. 5 feet

19. Ocean waves build during a storm until there is a vertical distance from high point to low of 6 meters and a horizontal distance of 9 meters between adjacent crests. The waves hit the shore every 5 seconds. What is the speed of the waves?

- A. 1.2 m/s
- B. 1.8 m/s

- C. 2.0 m/s
 - D. 2.4 m/s
20. If a 5.5-kg ball is moving at 4.5 m/s, what is its momentum?
- A. 10 kg·m/s
 - B. 16.2 km/h
 - C. 24.75 kg·m/s
 - D. There is not enough information to calculate momentum.
21. Household alternating current typically has a frequency of 60 Hz. Which statement is true?
- A. The circuit is appropriate for lighting 60-watt bulbs.
 - B. Circuits in the home may carry a current of 60 amperes.
 - C. The expected voltage drop is 60 volts per meter.
 - D. Electrons complete a cycle 60 times per second.
22. A 25-cm spring stretches to 28 cm when a force of 12 N is applied. What would its length be if that force were doubled?
- A. 31 cm
 - B. 40 cm
 - C. 50 cm
 - D. 56 cm
23. A 2,100-kg car runs around a 5-km long circular track with a centripetal acceleration of 3 m/s^2 . What is the net force acting upon the car?
- A. 450 N
 - B. 700 N
 - C. 1,500 N
 - D. 6,300 N
24. A circuit consists of three same-size resistors, wired in series to a 9-V power supply and producing 1 amp of current. What is the resistance of each resistor?

- A. 9 ohms
- B. 6 ohms
- C. 3 ohms
- D. 1 ohm

25. An object with a charge of $3\ \mu\text{C}$ is placed 30 cm from another object with a charge of $2\ \mu\text{C}$. What is the magnitude of the resulting force between the objects?

- A. 0.6 N
- B. 0.18 N
- C. 180 N
- D. 9×10^{-12} N

A2 PRACTICE TEST 3 EXPLANATORY ANSWERS

Reading Comprehension

1. (C) The main idea is the most important theme, one that carries throughout the passage. Although the other choices may connect to the topic, only choice C covers the overall passage.
2. (C) Although the relative size is mentioned (larger to smaller), specific size is never given. The other details appear in the passage.
3. (A) The basic purpose here is to provide information on a topic.
4. (B) The researchers did not look at reactions to violent videos (choice A). They did not compare boys in Australia to those in the United States (choice C), and there is no indication that they intend to study girls (choice D). Only choice B sticks to the material provided in the passage, as a summary must do.
5. (D) Light therapy is an “established form of medicine,” meaning not only that it exists, but also that it is customary and reputable.
6. (C) Choices A, B, and D are details, but choice C expresses the main idea of the entire passage.
7. (B) A statement of fact can be proved or checked. If necessary, you could prove that untreated jaundice may cause brain damage. The

other statements here express what someone thinks or believes.

8. (C) If a statement cannot be inferred by the reader, either there is not enough information to draw conclusions about it or the passage contradicts the inference. You can infer choice A from the fact that phototherapy has been around for more than a century. You can infer choice B from the final paragraph, and choice D from the fact that UV rays are filtered in light boxes to prevent such damage. Although you can infer that phototherapy is used to treat skin problems, there is no support for the conclusion that it is “most often” used for that purpose, making choice C correct.
9. (D) Skim the passage to identify the detail that does not appear.
10. (A) Substitute the choices in place of the vocabulary word. Only *central* (choice A) fits the context.
11. (C) Find the summary that best fits the overall substance of the passage. The passage never mentions studying the perpetrators of spankings (choice A) or spanking in various cultures (choice B). Choice D is a conclusion one might draw from the passage, but it is not a summary of the material in the passage.
12. (C) The author presents both sides but does not choose sides, as a persuasive essay might do (choice B).
13. (A) Choices B, C, and D have strong support in the passage. Choice A may or may not be true but is not supported by anything the author suggests.
14. (B) What is the passage mostly about? It is about napping and its effect on the brain.
15. (A) *Shifts* has a number of meanings, but in the context of “shifts in brain chemistry,” the best choice is choice A, alterations, or changes.
16. (B) The author does not insert himself or his opinions into the text, making choices C and D unlikely, but he does directly address the reader in paragraph 1, which means that choice A is not quite right, either.
17. (D) All of the details are mentioned in the passage, with the exception of choice D.
18. (A) Choice B is contradicted by information in the last paragraph. The low-intensity exercise group experienced less fatigue but similar

energy to the high-intensity exercise group, making choice C unlikely. There were three dozen participants in three groups, making choice D an unreasonable inference. The best choice is A—the passage states that this same team published a related study a few years ago.

19. (D) You could conclude this from the information given, but it would still be a matter of opinion rather than fact.
20. (D) If you don't read the word in context, you might choose any of the other choices. However, the author is clearly referring to the kind of track on which people jog or run.
21. (C) Choice A is a possible conclusion but not the main idea. Choice B refers to exercising hard, which is not what the passage suggests. Choice D is a detail. Choice C, the correct answer, reflects the overall theme of the passage.
22. (A) Ask yourself, "How does the author feel about drunkorexia? How does she make me feel about it?" The author's word choice evinces a feeling of dismay or concern.
23. (B) No one can abstain completely from food—no one can go without it.
24. (D) Choices A and B appear in paragraph 1, and choice C appears in paragraph 2. No mention is made of medical cures for this disorder.
25. (A) The answer would be choice B, to persuade, if the author were requesting an action or change in beliefs from the reader. Since the author is simply presenting facts and information, the better choice is A.
26. (A) Choices B, C, and D appear in a list in paragraph 2.
27. (B) To surf the Internet is to look at various websites.
28. (C) Choices A, B, and D receive clear support in the passage, but nowhere does the author imply that the majority of accidents are caused by sleepy drivers.
29. (D) *Irresponsible* is a value judgment; irresponsibility cannot be tested or proved. The other choices are testable.
30. (D) Choices A, B, and C are details from the passage, but only choice D covers the passage as a whole.
31. (C) Look for the statement that is unsupported by the information in the passage. That choice must be C—the passage states clearly that a

vegan diet includes no animal products, and dairy products are animal products.

- 32. (C) Look back at the paragraph in question, and you will see the word defined in context.
- 33. (B) The author describes the positive aspects of vegetarianism as a means of improving health.
- 34. (A) Choices B, C, and D appear in paragraph 2, but protein is never mentioned.
- 35. (B) The passage does not support choices A or D, and choice C is just a small detail. The best choice is B.
- 36. (C) The CDC gives the elderly an admonition to move slowly and carefully. In other words, it gives the elderly a warning, or caution.
- 37. (B) All of the other choices have some support in the passage. However, the passage indicates that one-third of the people who fall sustain serious injury, of which some unnamed percentage is to the hip, making B the best choice.
- 38. (D) With the correct experimentation or testing, you could prove or disprove choices A, B, and C. Choice D, however, remains a judgment call, or opinion.
- 39. (D) The main idea is introduced in paragraph 2—although women’s potential for bone brittleness has received attention, men have been overlooked until recently.
- 40. (A) When you book a bone density test, you schedule the test with your clinic or doctor.
- 41. (B) All of the choices but choice B are listed in paragraph 3.
- 42. (B) The question refers to the first sentence in the passage, so that is the sentence you must refer to in order to respond. The first sentence states, “Almost everyone knows, thanks to everything from newspaper articles to endless television commercials, that bone density is a major health concern for women.” That does not mean that only women are at high risk (choice C); it simply means that the media give osteoporosis a lot of attention.
- 43. (C) Look for the idea that applies to the passage as a whole.
- 44. (A) Even if you do not recognize the word, you can use the context (especially the term *chronic fatigue*) to eliminate choices C and D

entirely and focus on choice A as the best answer.

- 45. (B) The passage primarily gives information; it does not express an opinion or ask for the reader to act, as a persuasive essay would do (choice D).
- 46. (A) How does the author feel about the topic of SAD? The passage describes the negative aspects of SAD and its effects on patients, not in a lighthearted, irritated, or offended way, but in a relatively sympathetic way.
- 47. (C) Choice C is the only one that sticks to the basics of the passage without focusing too closely on one detail or moving beyond the scope of the essay.

Vocabulary and General Knowledge

- 1. (D) To waft is to propel lightly through the air.
- 2. (C) A feeling of contempt is a feeling of disdain, or scorn.
- 3. (A) *Ostracize* is from a Greek word meaning “banish” or “exile.” If you ostracize someone, you exclude him or her from your social group.
- 4. (A) *Indigent* translates literally as “in need.”
- 5. (B) A nit is the egg or young of a louse.
- 6. (C) If something is hypothetical, it is unproved but assumed to be true.
- 7. (D) To swathe is to wrap in a long strip of cloth, a blanket, or a bandage.
- 8. (B) A patient may be resistant to disease, or a microbe may be resistant to antibiotics. The effect is the same—they are unaffected.
- 9. (C) *Systematic* and *formulaic* both imply a sort of methodical arrangement.
- 10. (A) Although *synthetic* implies falseness (choice B), the better definition in the case of a drug is “man-made” (choice A).
- 11. (C) Often an antidote is given to counteract a poison.
- 12. (B) The root *sang* means “blood.” Think *sangria*, which is the color of blood, or *sang-froid*, which translates directly to “cold-blooded” and is used to mean “self-possession.”

13. (D) Someone who is puerile is childish. The word *puerperal* means “having to do with childbirth.”
14. (C) Evisceration has to do with removal of the viscera, the internal organs—or removal of their contents.
15. (B) *Flux* has a variety of meanings, all related to flowing or outflow. In medical terms it often refers to a discharge from the bowels.
16. (C) Regulations are used to regulate, or control, conduct in a business or government.
17. (C) A product that is assembled is one that is constructed, or put together.
18. (A) A hose might emit water; a lamp might emit light. The word means “to discharge” or “to radiate.”
19. (B) The parietal bones form part of the top and sides of the skull.
20. (B) The prefix *intra-* means “within” or “inside.”
21. (A) The talus joins with the ends of the fibula and tibia to create the ankle joint.
22. (A) If it is derivative, it derives from something else.
23. (D) *Histrionics*, from a Latin word for “actor,” implies overacting.
24. (D) To contravene is literally “to come against.” If you contravene orders, you go against them, or disregard them.
25. (B) In four-legged creatures, the caudal part is nearest the tail. In humans, it is at the base of the body, toward the feet.
26. (B) The prefix *a-* means “not,” so something that is aseptic is not septic, or not infected or diseased.
27. (C) A placebo is a harmless compound given as though it is medicine, usually as a control in an experiment testing new medication.
28. (A) From the same root as *same*, the word *simulated* means “gave the appearance of.”
29. (B) The dosage would not restore the tenderness (choice D); it would make it feel better (choice B).
30. (D) *Doleful*, as *dolor*, derives from a root that means “to suffer.” To be doleful is to be full of sorrow.
31. (C) The clavicle connects the scapula with the sternum.
32. (D) To be unruffled is to be “not ruffled,” or undisturbed.

33. (A) Although *adverse* may mean “in an opposite direction” (choice B), when it relates to a reaction to medicine, it means “harmful,” or “unfavorable.”
34. (B) According to legend, Julius Caesar was born this way—delivered by cutting through his mother’s abdominal and uterine walls.
35. (C) A contusion, unlike an abrasion (choice D), is an injury in which the skin is not broken.
36. (D) A chronic condition, from the root *chronos*, meaning “time,” is one that continues or recurs. Examples include asthma or arthritis.
37. (A) *Alleviate* contains a root meaning “light.” It means “to lighten” or “to relieve.”
38. (C) The Latin is *bis in die*, meaning “twice a day.”
39. (C) An inquest is essentially a coroner’s investigation of a death, which typically includes an autopsy, or dissection of the corpse.
40. (B) *Corpus delicti* (choice A) means “the body of facts proving a crime.” The corpus striatum (choice C) is the ganglia anterior to the thalamus. The corpus callosum (choice D) names the fibers that connect the cerebral hemisphere. The corpus luteum plays an important role in reproduction.
41. (A) Another word for this might be *clique*.
42. (B) *Verus*, as in *verify*, means “true.”
43. (C) Businesses are in compliance when they comply with, or obey, the rules of the trade.
44. (D) The Centers for Disease Control and Prevention, based in Atlanta, is charged with monitoring health, overseeing prevention, performing research, and promoting healthy behavior nationwide.
45. (C) The PDR is the *Physicians’ Desk Reference*, a compendium of prescription drugs, their dosages, interactions, functions, and chemical makeup.
46. (B) *Laceration* comes from a root that means “to tear.” Any jagged wound can be considered a laceration.
47. (B) The root *hemo*, as in *hemoglobin*, means “blood.” A hemostat compresses a blood vessel to reduce blood flow.

48. (C) To be enervated is to be nerveless, or weak. It may be used to describe someone who is exhausted or debilitated.
49. (D) To palpate something is to examine it by touching. A palpable lump can be touched, or felt.
50. (A) The affected area is the area that has an effect on it—the area that is involved. It does not necessarily imply that a disease is present (choice B).

Grammar

1. (B) The sentence is composed of two independent clauses. They could be written as two separate sentences, or they may be separated by a semicolon.
2. (D) The action takes place in the future—the time between now and when the semester ends. Therefore, the verb must be in the future tense.
3. (A) The foxes are not ingenuous, meaning “naive.” They are ingenious, meaning “clever.”
4. (D) Reading the choices aloud may help you determine which choice has a logical order of phrases and clauses. The least convoluted sentence is choice D.
5. (C) You can effect change, but you would affect a decision.
6. (C) The pronoun is the object of a preposition, so it must be an object pronoun. Object pronouns include *me*, *us*, *her*, *him*, *it*, and *them*.
7. (A) Jenny is a girl, so the feminine version of the object pronoun is required.
8. (D) A city may be a capital; a building may be a capitol.
9. (A) Try the choices in place of the blank. Only *despite* (choice A) fits the context.
10. (D) The words *these supplies* introduce a list. A colon should separate them from the list itself.
11. (C) To *forfeit* is from a root meaning “crime,” literally “to do beyond.” It is one of those spelling demons that you must simply memorize.
12. (B) The infinitive phrase makes the most grammatical sense in context.
13. (A) To *loose* is to release; to *lose* is to misplace or use up.

14. (D) If you get rid of the intervening word, you can see that *have broken* is the correct construction.
15. (D) Reading the choices aloud may help you to find the least tortuous one.
16. (B) The flock does not have feathers; the individuals in the flock have feathers. Since the flock is being treated as a group of individuals (as the verb *huddle* suggests), the pronoun should be plural.
17. (B) The pronoun required is a plural, first-person, subject pronoun.
18. (C) *Then* is an adverb meaning “at that time.” The word required here is *than*, a conjunction.
19. (C) A comma should come between the introductory clause (*Although we had met earlier*) and the rest of the sentence.
20. (D) Thinking about laboring in the laboratory may help you remember how to spell this word.
21. (A) The sentence is composed of two independent clauses that could stand on their own as sentences. A semicolon must divide the clauses.
22. (B) The sentence calls for a word that indicates contrast, as *but* would—despite the fact that she is caring, she needs more training. *Nevertheless* is the correct word here.
23. (D) A menage is a household or group. To manage is to supervise.
24. (B) The pronoun must refer back to the subject, *centrifuge*, a genderless word that calls for a genderless pronoun.
25. (B) Was the family behind their house? No, the garden was. Choice B offers the best, most logical construction.
26. (A) I did not have torn pages; my book did. Placing the phrase closer to the word it modifies would improve the sentence.
27. (C) Choice A would be correct if the second verb in the sentence were in the present tense. *Operated* would be correct if it were presented as a choice. Only choice C works in the context of the sentence.
28. (A) To match the tense in the rest of the sentence, the verb phrase should be *Having completed*.
29. (C) The second half of the sentence talks about the future, so the first half should as well.
30. (C) This is a question that lacks end punctuation.

31. (D) The next few months are in the future, so the appropriate verbs will be in the future tense.
32. (B) Jeremiah could seem enthusiastic, an adjective, but he could not seem enthusiastically, an adverb. He could cheer enthusiastically, but *seem* is a linking verb that links Jeremiah to an adjective that describes him.
33. (A) Pronouns that are the objects of a preposition (*to*) must be object pronouns, and naming oneself last is a convention of standard English.
34. (A) The pronoun must replace *Kendra's*, so it must be a third-person, feminine, possessive pronoun. *Hers* (choice D) would only be correct if the pronoun were not modifying a noun (*books*).
35. (D) It may sound awkward, but choice D is correct. It features an object pronoun, which is the right choice when the pronoun is being used as an indirect object. Whom did Dr. Lucas show? He showed them.
36. (D) The following sentence is composed of two independent clauses: *Do not be afraid to ask questions in his class and he is very approachable and explains things well*. They should be separated by a semicolon.
37. (A) From the Latin *vulnerare*, “to wound,” this is a word that is easily spelled if it is pronounced correctly.
38. (C) *Few* is a plural subject that requires a plural form of the verb—*deserve*.
39. (C) Read the whole sentence before you choose. Plugging each choice into the blank may help you select the verb that fits the tense and mood of the rest of the sentence.
40. (C) The bride’s stationery does not compliment, or praise, her decor—it complements, or matches it.
41. (C) Who or what was lying on the sidewalk? Choices A and D make it seem as though Jon was on the sidewalk. Who or what was silver? Choice B makes it seem as though the woman was silver. Only choice C puts all modifiers near the words they modify, thus clarifying the meaning.
42. (A) The committee is working as a unit to produce a single report, so *its*, meaning “belonging to it,” is an appropriate pronoun. If the

- committee worked as separate individuals to prepare a variety of reports, the pronoun might be *their* (choice B).
43. (B) Two independent clauses separated by *and* require a comma before the conjunction.
44. (D) The word means “not ceasing,” which may help with its spelling.
45. (D) The coats belong to the patients. The coats are theirs.
46. (C) The pronoun is an indirect object, so it must be an object pronoun—*whomever*.
47. (A) What is now on blocks? The car with the broken axle is now on blocks. Choice A makes the description and action clearest.
48. (B) Of all the choices, only choice B, if moved to the beginning of the sentence, would make the action clear: “From my car window, I noticed a number of workers who were repairing the road alongside the mall.”
49. (B) The word *still* is a clue here—even though the patients are resting comfortably, bed checks must be done. *However* best expresses this “in spite of X, Y” connection between ideas.
50. (B) Think about what happened to make Jessica mad. Her flight was cancelled. Then she drove home. Then she typed the letter. Choice B puts these actions in logical order.

Basic Math Skills

1. (A) Express the mixed numbers as improper fractions: $1\frac{3}{5} \times \frac{9}{8}$. Then multiply numerators and denominators for a product of $\frac{117}{40}$. Finally, express this as a mixed number in lowest terms: $2\frac{37}{40}$.
2. (C) First find the difference in price: $75¢ - 25¢ = 50¢$. Then put the difference over the original price to find the percent change: $\frac{50¢}{25¢} = 2$, or 200%.
3. (D) Set this up as a proportion: $2.5/1 = x/6$. You may cross-multiply to solve: $2.5 \times 6 = x$. $x = 15$. Alternatively, just think: 1 cake takes 2.5 cups, so 6 take 2.5×6 cups.
4. (C) Takuo started with \$5 and spent $\$1.35 + \1.75 in all. Subtract that total, \$3.10, from \$5 to get the amount left—\$1.90.

5. (D) Percents are fractions of 100, so you must multiply numerator and denominator by 20 to find the percent.
6. (C) If 1 mile equals 1.6 kilometers, 12 miles equals 1.6×12 , or 19.2 kilometers.
7. (1165) Reading from left to right, $M = 1,000$, $C = 100$, $L = 50$, and $XV = 15$, making the date 1165.
8. (B) Use common sense—0.25 is the same as $\frac{1}{4}$, so you are being asked to find $\frac{1}{4}$ of 0.4, which would be 0.1.
9. (C) Multiplying two numbers with two digits to the right of the decimal point should result in a product with four digits to the right of the decimal point. However, in this case, the final digit, 0, is dropped off.
10. (40) There were $5 + 8 + 2 + 5$ deliveries in all, or 20 patients. 8 out of $20 = 40$ out of 100, so the percentage of people with broken bones was 40%.
11. (A) The Mayan system is based on 20. The Babylonian system (choice B) is based on 60.
12. (24) The least common denominator is the least number into which each denominator divides. 8 does not divide into 12, but it does divide into 24.
13. (A) This is the correct form for times before noon.
14. (B) The actual population must be an equivalent ratio to 1:12. In the case of choice B, $(1 \times 85):(12 \times 85) = 85:1,020$.
15. (C) Express the mixed numbers as improper fractions, and multiply the first by the reciprocal of the second. $4\frac{5}{8} = \frac{37}{8}$. $1\frac{1}{2} = \frac{3}{2}$. $\frac{37}{8} \times \frac{2}{3} = \frac{74}{24}$. Now reduce to lowest terms and express the answer as a mixed number. $\frac{74}{24} = \frac{37}{12} = 3\frac{1}{12}$.
16. (C) Think: Bai Lin uses 10% + 30% of some unknown total, x , on savings and living expenses. She uses 40%, so \$1,545 must represent 60% of that total. Now you have enough information to set up an equation. 60% of $x = \$1,545$. $0.60x = \$1,545$. $\$1,545 \div 0.60 = x$, so $x = \$2,575$.
17. (2,639) This is one of those times when, even though the dollar amounts are so close to whole numbers, you should not round before you calculate. $500 \times \$5 = \$2,500$, and $\$24 \times 6 = \144 . Adding those totals gives you \$2,644. However, doing the actual math:

$500 \times \$4.99 = \$2,495$, and $\$23.99 \times 6 = \143.94 . Adding those totals gives you $\$2,638.94$, which is $\$2,639$ to the nearest dollar. Pennies add up quickly when you are talking about 500 of them!

18. (B) To find the percent $\$2.43$ is of $\$13.50$, simply divide: $\$2.43 \div \13.50 . The answer is 0.18, or 18%.
19. (A) One milliliter = 0.001 liters, so 500 milliliters = 0.5 liters.
20. (C) You can find the answer by setting up a proportion. First convert the feet to inches: 4 feet = 48 inches. Then solve the proportion: $\frac{1}{10} = \frac{x}{48}$, so $x = 4.8$ inches. You do not even need to complete the proportion for 5 feet, or 60 inches.
21. (A) Estimation should eliminate choices C and D, and looking at place value should show you that $43.210 - 1.234$ will give you an answer whose last digit is 6, not 7. The correct answer is A.
22. (56) Solve this as you would any other problem of this sort. Think: $0.15x = 8.4$. $8.4 \div 0.15 = 56$. Check by thinking: Does it make sense that 15% of 56 would be around 8?
23. (D) Express the mixed number as an improper fraction: $17\frac{1}{3}$. Then find the lowest common denominator and restate the two fractions: $\frac{119}{21} + \frac{18}{21}$. Solve, and express as a mixed number in lowest terms: $\frac{137}{21} = 6\frac{11}{21}$.
24. (C) First determine how much Joanie spent in all: $\$1.25 + \$1.35 + \$2 = \4.60 . Subtract to find out how much change she was owed: $\$5.00 - \$4.60 = \$0.40$. There are many combinations of coins that add up to $\$0.40$; the smallest combination is 1 quarter + 1 dime + 1 nickel, for 3 coins in all.
25. (B) Choice A would translate as 0920. The correct answer is choice B.
26. (D) Start by determining how many dozens are in 180: $180 \div 12 = 15$. The bakery must add 1 cupcake per dozen, or 15 in all.
27. (A) You may not need pencil and paper for this one. 110% is slightly more than 100%. Solve by thinking: $1.10 \times 40 = 44$.
28. (B) Think: $92 \div 11$ is around 8. $8 \times 11 = 88$. $92 - 88 = 4$, so the remainder is 4.
29. (D) If you know that there are 52 weeks in a year, this should be fairly simple. He runs $4 + 3$ miles a week, so he runs 7×52 miles a year, or 364 miles.

30. (A) Change the percent to a decimal and multiply to solve:
 $0.15 \times 95 = 14.25$.
31. (C) You may not need to calculate this if you use common sense, but if you do need to calculate, simply divide 12 by 30. $12 \div 30 = 0.4$.
32. (A) Since 2.2 pounds = 1 kilogram, 11 pounds = $1\frac{1}{2.2}$ kilograms, or 5 kilograms.
33. (C) Think: $6 \div 7 = 0.857142 \dots$
34. (B) If three cost \$9.99, the unit price is \$3.33. Dividing that into \$50 gives you 15 with a bit left over. You might also consider that \$9.99 is close to \$10, and $\$50 = 5 \times \10 , so he could buy approximately 5 times the three comic books, or 15 in all.
35. (A) 1,000 = M. 700 = DCC. 70 = LXX. 6 = VI.
36. (C) Call Europe x , Africa y , and Asia z . $x = 27$, so $y = 27 - 15$, or 12. Therefore, $z = 12 + 18$, or 30.
37. (D) Use common sense. The first number is a bit more than 5. The second is a bit more than 2. Multiplying them must get you a product that is greater than 10.
38. (C) Try estimating. The numbers being multiplied are a little less than 1 and a little more than 2, so the answer will be around 2. You can find the answer without working out the computation.
39. (A) The formula is $F = (\frac{9}{5})C + 32$. $(\frac{9}{5})15 + 32 = 59$.
40. (B) In real life, the deck is 12×50 cm by 10×50 cm, or 600 cm by 500 cm. Since there are 100 centimeters in a meter, you should be able to tell right away that the answer will be 6 m by 5 m, or choice B.
41. (C) Rebecca's fence must have 144 pickets. She can paint 12 an hour, so she can do 144 in $144 \div 12$, or 12 hours.
42. (C) Since you are essentially dividing 12 into 14, the answer must be close to 1. Only choice C makes sense.
43. (D) $\frac{7}{4} = \frac{21}{12}$. $\frac{21}{12} - \frac{1}{12} = \frac{20}{12}$, which is the same as $1\frac{8}{12}$, or $1\frac{2}{3}$.
44. (C) If James paid \$1.44 for 6 lemons, each lemon cost $\frac{\$1.44}{6}$, or \$0.24. Divide that into \$4.80 to find how many Casey bought: $\frac{\$4.80}{\$0.24} = 20$.
45. (D) To add and subtract fractions, first find the lowest common denominator and convert each fraction to an equivalent fraction with that denominator. Here, the lowest common denominator is

48. $2\frac{44}{48} - \frac{9}{48} = 2\frac{35}{48}$. That fraction cannot be reduced further, so the answer is D.
46. (A) $85\% = \frac{85}{100}$. $\frac{85}{100} \div \frac{5}{5} = \frac{17}{20}$.
47. (200) Since 88 is 88% of 100, twice 88, or 176, must be 88% of 200.
48. (C) Take 2% of \$1,050. $0.02 \times \$1,050 = \21 . Now add that to \$1,050: $\$1,050 + \$21 = \$1,071$.
49. (120) If 60% showed improvement, 40% did not. $0.40 \times 300 = 120$.
50. (32) There are 16 cups in a gallon and 32 cups in 2 gallons.

Biology

- (B) Vacuoles are saclike structures in eukaryotic cells that contain water and solutions of salt and food materials.
- (C) Fermentation is an incomplete form of cellular respiration. When it occurs in yeast, pyruvic acid is converted into ethanol and carbon dioxide. When it occurs in muscle cells that are not receiving enough oxygen, pyruvic acid is converted into lactic acid.
- (C) Telophase is the phase in which the spindle dissolves and new membranes and nucleoli form, leading to two new cells.
- (B) In protein synthesis, coded information from DNA is translated into a finished protein. First, DNA unzips and RNA nucleotides bond with bases on each unzipped segment, forming messenger RNA. Then messenger RNA leaves the nucleus and attaches to a ribosome in the cytoplasm. Transfer RNA moves into position along the messenger RNA, and the amino acids attached to the transfer RNA molecules bond, forming the protein.
- (C) If the trait is carried on the dominant allele, either an AA combination or an Aa combination result in the manifestation of the trait. On a Punnett square, that would represent 3 out of 4 choices.
- (A) Osmosis is the process whereby molecules of water move from an area of greater concentration to an area of lesser concentration. Bacteria and fungi that land on salty foods lose water from their cells and die.
- (D) A substance may move across a cell membrane from an area of low concentration to one of high concentration if it is pushed or pulled via the use of energy from ATP.

8. (B) Enzymes are proteins that function as catalysts in chemical reactions.
9. (A) Gymnosperms do not produce flowers or encase their seeds in fruit. Evergreens and conifers are gymnosperms.
10. (C) This is the definition of commensalism. An example might be cattle egrets and cattle. The cattle stir up insects, and the egrets consume them.
11. (C) In order, dogs belong to the kingdom Animalia, the phylum Chordata, the class Mammalia, the order Carnivora, the family Canidae, the genus *Canis*, and the species *lupus*.
12. (A) In saturated fats, all carbons are attached to two hydrogen atoms.
13. (A) The centriole is involved in animal cell reproduction. Vacuoles (choice C) are found in plant cells but not in animal cells.
14. (D) The asexual reproduction technique known as fragmentation is common in plants and less common in animals, but it does occur in sponges, coral, and some worms.
15. (B) Humans have 23 pairs of homologous chromosomes, for a total of 46.
16. (A) Messenger RNA carries the code to form a protein. Its first step once it receives that code is to leave the cytoplasm and attach to a ribosome, where its message is decoded by transfer RNA.
17. (B) Displayed on a Punnett square, the cross would yield one female carrier, one female hemophiliac, one male hemophiliac, and one normal male who neither carries nor manifests the disease. Only one of the four, a female X_hX , would be a carrier only.
18. (C) Cellular respiration breaks down glucose and oxygen into carbon dioxide and water, using ADP.
19. (B) The measurement is reliable, because repeating it yields the same result. However, because it does not equal Patient A's true weight, it is not valid.
20. (C) The greatest energy content is at the base of the energy pyramid. A coyote, being a secondary consumer, is higher up the energy chain than any of the other choices.
21. (C) Although it may be useful to compare men and women in a later study (choice D), the study in choice C does a good job of comparing

- yoga to another activity over a reasonable period of time.
- 22. (A) A nitrate is a nitrogen-containing material found in soil. Green plants take in nitrates through their roots and use them to make amino acids, the building blocks of proteins.
 - 23. (B) Green light is reflected rather than absorbed by chlorophyll, so it is not useful in photosynthesis.
 - 24. (B) This is essentially the composition of a virus.
 - 25. (D) Triglycerides, as their name suggests, are composed of three fatty acids attached to glycerol. Phospholipids contain two fatty acids, glycerol, and a phosphate group, so they lack one of the fatty acids found in triglycerides.

Chemistry

- 1. (C) Aluminum as an atom has 13 electrons. For an aluminum ion to have a +3 charge indicates that the atom lost 3 electrons and now has 10.
- 2. (A) The pH scale has a range of 1 to 14 with the number 7 indicating a neutral solution. An acidic sample will have a lower pH value, whereas a basic solution will have a higher pH value. Blood with a pH of 7.3 would be considered slightly basic.
- 3. (D) Forty years represent two half-lives. After one half-life, 3 grams will remain. After two, 1.5 grams will remain.
- 4. (C) All of the compounds listed are covalently bonded because they contain all nonmetals. The equal sharing occurs when the electronegativity of the elements is the same.
- 5. (C) This combination of iron and sulfur forms iron (II) sulfide and is a synthesis reaction.
- 6. (A) Nonmetals are poor conductors (choice D), dull (choice B), and brittle (choice A) rather than malleable (choice C), at least in the solid state.
- 7. (B) A gas with low molar mass will diffuse more rapidly than one with greater molar mass.
- 8. (A) Molecular oxygen is O_2 ; ozone is O_3 . It is thermodynamically unstable and highly reactive.

9. (B) Gases decrease in solubility as temperatures increase. Solids increase in solubility as temperatures increase.
10. (A) Hydrocarbons are formed of hydrogen and carbon. Complete combustion in oxygen forms CO_2 and H_2O .
11. (A) The zinc is balanced across the equation, but the chlorine and hydrogen are not. Choice A gives you two atoms of each on either side of the equation.
12. (C) On the periodic table, the atomic radii of atoms tend to decrease across a period from left to right and increase down a group, with the largest radii appearing in group I and at the bottoms of groups.
13. (A) An ionic bond is a chemical bond in which one atom loses an electron to become a positive ion, and another gains an electron to become a negative ion. Usually the bond is between a metal cation and a nonmetal anion. Sodium chloride is a typical example:
 $\text{Na} + \text{Cl} \rightarrow \text{Na}^+ + \text{Cl}^- \rightarrow \text{NaCl}$.
14. (B) A neutral atom has the same number of electrons as protons. Neon, with atomic number 10, has 10 protons and thus 10 electrons in its neutral state.
15. (B) The electron distribution of an atom is divided into shells, which in turn contain subshells composed of the orbitals in which the electrons reside. In electron configuration, the symbols 1s, 2s, 2p, and so on, are used to designate subshells, with superscripts indicating the number of electrons in each subshell. There is a maximum number of electrons per subshell. Carbon has atomic number 6, meaning that it has 6 protons, and in its balanced state, 6 electrons. Looking at the superscripts alone should tell you that only the superscripts in choice B add up to 6.
16. (A) The number of moles remains constant, but the volume increases tenfold, so the moles/volume (molarity) is $\frac{1}{10}$ the original.
17. (D) Acids turn litmus paper red.
18. (A) Hydrogen chloride, HCl , has a mass in grams equal to the atomic weight of one atom of hydrogen plus one atom of chlorine—about 1 + 35, or 36 g.
19. (D) Unlike alpha and beta radiation, gamma rays have no mass and no charge.

- 20. (B) Magnesium oxide is used in a variety of products, notably antacids.
- 21. (A) Since hydrogen has an oxidation state of +1, in this case the nitrogen requires a state of -3 to balance the $+3$ of the H_3 molecule.
- 22. (B) London dispersion forces are the only attractive forces between neutral atoms (as in a noble gas).
- 23. (B) There are 58.5 grams in 1 mole of NaCl . Setting up to calculate the molarity of the solution, you divide 1.0 mole by 0.500 liters: $1.0 \text{ moles} \div 0.500 \text{ liters} = 2.0 \text{ M}$.
- 24. (D) Sodium nitrite is NaNO_2 (choice C). Sodium nitrate is NaNO_3 . It is used in fertilizer and as a preservative.
- 25. (D) Ionization energy is the minimum energy required to remove one electron from each atom in a mole of atoms in a gaseous state. On the periodic table, ionization potential tends to increase across a period, because the greater number of protons (not neutrons) attract orbiting electrons more strongly, thus requiring more energy to remove those electrons from orbit.

Anatomy and Physiology

- 1. (A) Something that is anterior is toward the front of the body. The nose is the most anterior feature on the list of choices.
- 2. (D) Thyroxine (T_4) aids in the regulation of metabolism.
- 3. (A) A goiter may put pressure on the trachea and esophagus, causing difficulty in breathing or swallowing.
- 4. (A) Peristalsis is mainly involuntary, taking part in the smooth muscles that line the intestines and other parts of the digestive tract.
- 5. (A) This is a common cause of underweight in adolescents. Choices B and C would be more likely to lead to overweight.
- 6. (D) The parietal lobe integrates sensory input and creates a spatial grid from which we perceive the world.
- 7. (D) The urinary system eliminates water, urea, and other waste products from the body in the form of urine.
- 8. (B) The adrenals sit atop the kidneys and produce a variety of hormones, from cortisol and testosterone to epinephrine (adrenaline) and norepinephrine.

9. (B) In men, the urethra is part of both the reproductive and the urinary systems.
10. (D) The axial skeletal system is the system of bones in the head and torso, encompassing the skull, spinal column, sternum, and ribs. The radius (choice D) is a bone in the arm.
11. (C) The gall bladder stores the fat-digesting bile produced by the liver.
12. (D) In nonspecific immunity, the response is immediate and antigen-independent, meaning that the invading organism need not be identified by the body. In specific immunity, the response takes some time and is antigen-dependent, as the production of specific antibodies would be.
13. (B) The body's electrolytes must be maintained at very precise concentrations. Excess water dilutes the body's electrolytes, whereas water restriction concentrates them. The kidneys regulate and help maintain the balance of water and electrolytes in the body.
14. (D) Choice A describes the pulmonary vein, and choice B describes the pulmonary artery. Most of the arteries of the body perform the function described in choice C, but the coronary artery's main function is to feed blood to the heart muscle to allow it to pump.
15. (D) Scurvy was once the disease of sailors because months at sea without fruits and vegetables led to vitamin C deficiency. Without vitamin C, the human body cannot synthesize collagen, leading to spongy tissue and bleeding sores.
16. (A) Messages from the nervous system tell the muscles to contract, which in turn moves the bones.
17. (B) FSH (choice A) and LH (choice C) regulate reproduction. ADH (choice D) promotes water retention. TRH (choice B) is produced in the hypothalamus and releases thyroid-stimulating hormone.
18. (C) The ribs are in front of the lungs in the human body, making them closer to the front of the body, or anterior.
19. (B) The range is about 7.35 to 7.45, making blood fairly neutral. Excess carbon dioxide can lead to acidosis, a pH below 7.35.
20. (D) A transverse section is a cross section; it separates the body horizontally into upper and lower sections.
21. (D) Lactase breaks down lactose into simpler sugars.

- 22. (B) The hypothalamus regulates the body's internal balance, or homeostasis. It also controls the pituitary gland and links the endocrine system to the nervous system.
- 23. (A) Fluid balance is connected to electrolyte balance. The key electrolytes in the human body include sodium, potassium, calcium, chloride, and bicarbonate.
- 24. (D) The skull sits atop the spinal cord, making it superior in position.
- 25. (D) The nervous system controls the voluntary movements of the skeletal system.

Physics

- 1. (B) Cork has holes throughout that reduce the volume of matter present (the cork is replaced by air), making it less dense than many other materials.
- 2. (D) Marilyn made a round trip of 8 miles to return to her starting point. Then she drove 1 mile plus 5 miles for a total of 6 miles to the wedding. Her displacement is 6 miles—the distance from her home to the wedding—but she drove a total distance of 14 miles.
- 3. (C) As long as the mass of the object remains the same, the relationship between force and acceleration is direct. Doubling the force will double the acceleration.
- 4. (A) An object that has a constant velocity does not experience any acceleration. Change in velocity is needed to calculate acceleration.
- 5. (D) Acceleration is defined as the change in velocity over time. In other words, $a = \Delta v / \Delta t$.
- 6. (A) Energy changes cannot affect mass. Increase and decrease in temperature can change volume (choice B), phase (choice C), and solubility (choice D). For example, heating water changes both its volume and its phase from liquid to gas. Sugar is more soluble in boiling water than in cold water.
- 7. (A) $W = Fd$, or $F = W/d$. The work, $100 \text{ N} \cdot \text{m}$, divided by 20 meters, gives a force of 5 N.
- 8. (D) Power equals voltage times current. The voltage is 110, and the current is 2.0, making the power 220 watts.

9. (A) The period is the time it takes for an event to repeat itself, measured in seconds. If the wings beat at 25 beats per second, the period of each wing beat is $\frac{1}{25}$ of a second, or 0.04 s.
10. (C) Kinetic energy can be found using this formula: $KE = \frac{1}{2} m(v^2)$, where m = mass and v = speed. In this problem, that would be $\frac{1}{2}(500 \times 100)$, or 2.5×10^4 Joules.
11. (B) Because the specific heat capacity of iron is close to twice that of tin, iron would require about twice as much heat to increase 1°C in temperature.
12. (D) In transverse waves, particle action is perpendicular to the motion of the wave.
13. (C) A vector quantity has both direction and magnitude.
14. (A) Density = mass/volume. Measuring the volume of the displaced water gives you the volume of the cube, and dividing that volume into the mass, 50, gives you the cube's density.
15. (D) Decreasing distance by a factor of 2 increases force by a factor of 2^2 . In this problem, $F = 48$.
16. (B) Ohm's law says that electric current is directly proportional to voltage and inversely proportional to resistance: $I = V/R$. The resistance is constant, independent of the current.
17. (A) According to Coulomb's law, like charges repel and opposite charges attract with a force proportional to the product of the charges and inversely proportional to the square of the distance between them.
18. (D) With a plane mirror, the distance from an object to the mirror is identical to the distance from the mirror to the image.
19. (B) The period is 5 seconds. From that you can determine the frequency; it is the reciprocal of the period, or $\frac{1}{5}$. The wavelength is 9 meters. Knowing that and the frequency, you can determine the speed using the equation $v = f\lambda$. $\frac{1}{5}(9) = \frac{9}{5}$, or 1.8 m/s.
20. (C) Multiply velocity by mass to find momentum.
 $4.5 \text{ m/s} \times 5.5 \text{ kg} = 24.75 \text{ kg}\cdot\text{m/s}$.
21. (D) Named for Heinrich Hertz, the hertz (Hz) is a unit of frequency defined as the number of cycles per second of a periodic phenomenon.

22. (A) Use the equation $k = F/x$, where k is the spring constant, F is the force, and x is the elongation. The spring elongated by 3 cm when stretched by a force of 12 N, so the constant is $12/3 = 4$ N/cm. Applying that constant to the new equation with double the force gives you $x = 24/4$, or 6 cm. Finally, add that number of centimeters to the original length, 25 cm, to get a total of 31 cm.
23. (D) Use the equation $F_{\text{net}} = ma$. The answer is $2,100 \times 3$, or 6,300 N.
24. (C) Resistance equals voltage divided by current, so the resistance must equal 9 ohms, divided over three same-size resistors, for 3 ohms apiece.
25. (A) Use Coulomb's law to find the force. The equation to use is this:

$$\frac{F_{\text{elect}} = k \times Q_1 \times Q_2}{d^2}$$

Remember that 1 coulomb = 10^6 microcoulombs. Q_1 in this case equals 3×10^{-6} C, Q_2 equals 2×10^{-6} C, and d , distance, equals 30 cm, or 0.3 m. Now, you must recall Coulomb's constant, $k = (9.0 \times 10^9 \text{ N}\cdot\text{m}^2/\text{C}^2)$. Once more, it's all about computation:

$$\frac{\frac{9.0 \times 10^9 \text{ N}\cdot\text{m}^2}{\text{C}^2} \times (3 \times 10^{-6} \cancel{\text{C}}) \times (2 \times 10^{-6} \cancel{\text{C}})}{(0.3 \text{ m})^2} = \frac{54 \times 10^{-3}}{0.09} = 0.6 \text{ N}$$
